Muir, Ronald J. Roberts, 2014-02-09 It is a tribute to the vigour of research and development in aquaculture that we are able in a relatively short time to provide readers with a second volume in this series which has such a diversity of high calibre research and developments to report That the first volume was so well received has been a source of great satisfaction to the editors and supported their conviction as to the need for links to join the research laboratory to the fish farm by making current research available to a wider range of potential users In this volume we have changed the balance somewhat towards more specialised subject areas We make no apology for this as the modern aquaculture professional is concerned with a wide range of specialisms within the broader content of management and production and there is every need to present such work in an acceptable format Furthermore many of these specialised topics have a significance right across the range of production are often economically critical and are therefore of considerable and widespread importance The first contribution by Dr Derek Robertson manager of the Institute of Aquaculture's Howietoun Fish Farm covers just such a subject *Recent Advances in Aquaculture V* James F. Muir, Ronald J. Roberts, 1995-01-17 *Recent Advances in Aquaculture V* is a structured collection of specialist research reports that present an international perspective on the developing field of aquaculture As in previous volumes contributions examine the most recent advances and developments in both the scientific and production based areas of the industry However Volume V provides greater emphasis on some of the wider issues including water resources and socio economic concerns This reflects a growing awareness among planners development agencies and industry leaders that aquaculture needs to be reviewed in its broadest context to ensure that development along productive and sustainable paths is not achieved at the cost of social dislocation and environmental damage Although there is increased focus on Africa and Asia Volume V offers balanced regional coverage reflecting the continuing theme in aquaculture that problems and solutions particular to one location or species will often be translocated elsewhere
