Recent Advances in the Modeling of Hydrologic Systems D.S Bowles,P. Enda O'Connell,2012-12-06 Modeling of the rainfall runoff process is of both scientific and practical significance Many of the currently used mathematical models of hydrologic systems were developed a generation ago Much of the effort since then has focused on refining these models rather than on developing new models based on improved scientific understanding In the past few years however a renewed effort has been made to improve both our fundamental understanding of hydrologic processes and to exploit technological advances in computing and remote sensing It is against this background that the NATO Advanced Study Institute on Recent Advances in the Modeling of Hydrologic Systems was organized The idea for holding a NATO ASI on this topic grew out of an informal discussion between one of the co directors and Professor Francisco Nunes Correia at a previous NATO ASI held at Tucson Arizona in 1985 The Special Program Panel on Global Transport Mechanisms in the Geo Sciences of the NATO Scientific Affairs Division agreed to sponsor the ASI and an organizing committee was formed The committee comprised the co directors Professor David S Bowles U S A and Professor P Enda O Connell U K and Professor Francisco Nunes Correia Portugal Dr Donn G DeCoursey U S A and Professor Ezio Todini Italy *Water and Development - Volume II* Catherine M .Marquette,2009-08-10 Water and Development is a component of Encyclopedia of Water Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Water is perhaps the most critical natural resource upon which humans depend Agricultural and food production trade and ultimately the economic development of all regions of the world depend on rivers streams dams oceans and other water resources This critical relationship has persisted through the agricultural and industrial revolution and into the era of economic globalization The relationship between human activity and the water resources on which it depends also continues to be reciprocal Human consumption energy agricultural industrial and other economic activity have significant impacts on water quality and quantity for better or worse A key element of sustainable development rests on our global capacity to interact with the water resources on which we depend in ways that preserve them for our use and that of future generations The two volumes on the subject present some of the topics such as Water Agriculture and Food Interactions dams water valuation arid regions water management and Conflict over Water Resources Water and Sustainable Development They consider the implications which contributions have in each of these areas as well as introduce additional issues relating to the future of dams innovative ways of increasing water supply transboundary water resources and the implications of global climate change for water resources These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts Managers and Decision makers and NGOs **Environmental Systems - Volume II** Achim Sydow,2010-09-27 Environmental Systems is a component of Encyclopedia of Environmental and Ecological Sciences Engineering and

the second the assessment and the third the occurrence and hydrological implications of soil water repellency The fourth section is devoted to the effect of fire on water repellency section five deals with the physics and modeling of flow and transport in water repellent soils section six presents amelioration techniques and farming strategies to combat soil water repellency and section seven concludes the book with an extensive bibliography on soil water repellency
