Calcification in Biological Systems Ermanno Bonucci, 2020-07-24 Calcification in Biological Systems provides a collection of up to date papers regarding calcification in a variety of biological systems The papers are not simple reviews of the literature Each paper reflects the personal experience of the author s and is rich in constructive criticism and suggestions Topics range from basic molecular processes to general structural problems in systems as different as unicellular organisms and human skeletal tissues Because calcification is so diffuse in the animal kingdom this book makes no attempt to achieve a conclusive synthesis of available results and current ideas Instead its merit lies in its ability to be useful to investigators with different scientific backgrounds and areas of interest

Reconstructing Past Monastic Life: Volume 1: Bioarchaeology, Life and Death Lluís Lloveras, Carme Rissech, Jordi Nadal, Philip Banks, 2025-07-30 Explores health and lifeways in monastic communities focusing on palaeopathological insights into well being disabilities and burial practices across various periods Monasticism is a form of religious life in which participants renounce worldly activities to dedicate themselves primarily to spiritual matters living in small communities subject to a set of rules and isolated from the secular world Christian monasticism which originated at the end of the 3rd century in Egypt and North Africa spread to different parts of Europe in the 6th century However it was not until the Middle Ages that monastic communities became one of the most powerful institutions in Europe Monasteries and convents played a very important role not only as centers of spirituality but also as focal points of economic technological and cultural activity This multiplicity of activities carried out alongside their religious social and political roles make monasteries spaces that can be studied from very different perspectives and that unfailingly provide essential information about our history This first of two titles originates from an international conference that took place in Barcelona in January 2024 which sought to examine different aspects related to monastic life in the past and to promote and disseminate the results obtained in the latest studies undertaken within the framework of

monastic complexes and their environments These include contributions and multidisciplinary studies from archaeological bioanthropological and or documentary perspectives Specialists from different disciplines present developments on the topic of monasticism from different fields of study such as zooarchaeology bioanthropology palaeopathology archaeology history documentary disciplines archives cultural heritage etc Volume 1 concentrates on health and lifeways within monastic communities focusing on palaeopathological information providing insights into physical well being and in particular the presence and significance of disabled individuals and evidence for long term health and dental issues A variety of scientific methods of analysis are applied to cemetery populations from monasteries and nunneries of different periods to examine both causes of and contributions to the death of individuals the composition of communities and the treatment of the dead Studies of assemblages of faunal remains from monastic complexes consider how faunal analysis can help interpret the role of domestic species

Toothpastes C. van Loveren, 2013 Indispensable for dentists dental students and community dental programs With the mass marketed introduction of fluoride in toothpaste in the 1950s toothbrushing with paste became indispensable for good oral health Both the industry and the dental profession had a shared interest in advocating the widespread correct use of good quality toothpaste This publication starts with a general introduction on the purpose history and composition of toothpaste The following chapters deal with the clinical evidence of its effectiveness in caries prevention reducing and preventing plaque gingivitis halitosis and calculus formation facilitating removal and prevention of extrinsic stain and preventing dentine hypersensitivity and erosion Later chapters provide valuable information on the abrasiveness of the pastes the substantivity of active ingredients in the oral cavity and the possible models to study the effectiveness of the pastes when full scale clinical trials are not possible The final chapter focuses on the frequency of toothbrushing and post brushing rinsing behavior The book provides indispensable information for dentists dental students and community dental programs on whether toothpastes can be recommended to patients for specific aims and how to use them to obtain the best effect

Biological Calcification: Cellular and Molecular Aspects Harald Schraer, 2012-12-06 The deposition of calcium containing salts is a widespread phenomenon in both the plant and animal kingdoms Its occurrence suggests a generalized biological adaptation to environments rich in calcium Indeed the Archaean ocean was rich in calcium carbonate and traces of ancient organisms have been found in lime stones estimated to be about 2.7 billion years old The fundamental nature of biological calcification makes it a subject of interest not only to the student of calcium metabolism and skeletal physiology but also to biologists in general As in many areas of biological science recent progress in this field has been rapid and no attempt was made here to cover all the biological systems in which calcification is an important facet of the organisms method of operation Calcification is approached in this volume at the levels of the cellular sites and molecular mechanisms that are involved in this process The ultrastructural and chemical features of the cells and their products which are associated with calcification are emphasized in several chapters The editor in inviting contributions from authors intended that collectively the chapters should convey a sense of the ubiquitous and essential nature of the role of calcification in several phyla of the plant and animal kingdoms The researchers were biochemists physical chemists cell biologists and physiologists some represented medicine and dentistry all were interested in calcification

Teeth Simon Hillson, 2005-07-21 Archaeological discoveries of teeth provide remarkable information on humans animals and the health hygiene and diet of ancient communities In this fully revised and updated 2005 edition of his seminal text Simon Hillson draws together a mass of material from archaeology anthropology and related disciplines to provide a comprehensive manual on the study of teeth The range of mammals examined has been extended to include descriptions and line drawings for 325 mammal genera from Europe North Africa western central and northeastern Asia and North America The book also introduces dental anatomy and the microscopic structure of dental tissues explores how the age or season of death is estimated and looks at variations in tooth size and shape With its detailed descriptions of the techniques and equipment used and its provision of tables and charts this book is essential reading for students of archaeology zoology and dental science

Dental Caries Ole

Fejerskov, Edwina Kidd, 2009-03-16 The second edition of Dental Caries the Disease and its Clinical Management builds on the success of the prestigious first edition to present an unrivaled resource on cariology The clinical thrust of the first edition is widened and strengthened to include coverage of the disease in all its variety from eruption of the first primary tooth to the prevalent forms of the disease in older patients The centrality of caries control and management to the dental health of all populations is further emphasized as the book goes beyond the successful treatment of carious lesions to demonstrate the long term consequences of the non operative and therapeutic techniques employed Biofouling and Biocorrosion in Industrial Water Systems Gill G. Geesey, 1994-04-15 Biofouling and Biocorrosion in Industrial Water Systems presents the state of the science on biofilm processes that relate to fouling corrosion of surfaces used in industrial systems The book explores engineering and scientific approaches to the characterization and control of biofilm processes and it introduces new developments in the analysis and understanding of microbial processes Several chapters have been devoted to examining the new concept of biological and chemical heterogeneity in microbial biofilms and how this has altered the way biofilm behavior is modeled
