Regional Science Perspectives For The Future:

Regional Science Manas Chatterji, 1997-01-01 Over the years complex tools in social sciences have been developed to analyze the consequences of alternative policy decisions Some of these tools are population growth and migration analysis income accounting cost benefit analysis programming industrial complex analysis and input output analysis Over the last fifty years these and other techniques have been used extensively to solve or manage regional problems However there has been continuous change in human settlement and location Location of inputs and outputs are no longer concentrated within a particular country The economy has become global Technology and political geography have changed drastically We need new tools of analysis This volume presents some innovative tools of analysis *Regional Science: Perspectives for the Future* Manas Chatterji, 2016-07-27 This book contains up to date original contributions by some of the world's best known experts in the area of urban and regional science Regional science provides the theoretical basis of urban and regional planning The subject covers such topics as regional development regional accounts spatial price computation regional and interregional knowledge networks and measurement of regional quality of life A considerable amount of change has taken place in the spatial pattern of socio economic activities and their interactions over the last half of the century leading to the need for more advanced tools of analysis in regional science This book fulfils this need *Tourism in South and Southeast Asia* C. Michael Hall, Stephen Page, 2012-10-12 Tourism in South and South East Asia is a comprehensive and solid introduction to tourism in South and South East Asia with a specific appeal both to institutions in the region and other institutions who wish to expose students to one of the most dynamic tourism regions in the world Despite downturns in outbound tourism due to the current economic crisis inbound tourism from outside the region has continued to increase with governments placing more emphasis on the economic significance of tourism than ever Tourism in South and South East Asia is the first tourism book to deal comprehensively with the implications of the Asian economic crisis for tourism With South and South East Asia set to be the fastest growing area of tourism activity in the world well into the next century Tourism in South and South East Asia is an essential text for students both within and outside of this region Dealing with concepts themes and issues which are pertinent to tourism development planning marketing and management these two internationally known authors have produced an authoritative text that covers all aspects of this topic through the use of illustrative and relevant case studies **Spatial Economic Science** Aura Reggiani, 2012-12-06 With the dawn of the twenty first century comes the awareness that current rapid political economic social and technological transformations will affect our of living by producing new forms of information communications common way market work style and leisure In this context human behaviour will certainly change its fixed parameters It is likely that the relationships between internal structures and external influences between individual components and collective behaviour as well as between multi scale networks and interrelated dynamics will show spatio temporal patterns which will be difficult to predict by means of our

usual tools As a consequence academic research is increasingly being required to play an active role in addressing new ways of understanding and forecasting the sets of interacting structures ranging from the technical to the organizational and from the social to the economic and political levels while at the same time incorporating concerns about the new economy environment society information and technology It is now evident that social science especially spatial and economic science needs innovative paths together with continuous cross fertilization among the many disciplines involved In order to investigate these intriguing perspectives we seem to have embarked on an era of methodological reflections rather than developing strong theoretical foundations This volume aims to provide an overview of these new insights and frontiers for theoretical methodological studies and research applications in the space economy *Evaluating Earthquake Hazards in the Los Angeles Region--an Earth-science Perspective* Joseph I. Ziony, 1985 An integrated set of studies describing methods for evaluating geologically controlled earthquake hazards as a basis for reducing future losses **The Future of Urban Form** John Brotchie, Peter Newton, Peter Hall, Peter Nijkamp, 2017-10-12 This book first published in 1985 explores the ways in which the editors and contributors predicted the urban system shaped by emerging technologies would look like both nationally and internationally The technological changes covered include automation in the secondary sector the effects of energy price rises and threats of shortage and substitution effects in the energy and vehicle technology areas Social and economic factors discussed include unemployment patterns urban activities and lifestyles and their interactions This title will be of interest to students of urban studies *Population Change and the Future of Rural America* , 1993 *The Routledge Handbook to Regional Development in Central and Eastern Europe* Gábor Lux, Gyula Horváth, 2017-07-06 Twenty five years into transformation Central and Eastern European regions have undergone substantial socio economic restructuring integrating into European and global networks and producing new patterns of regional differentiation and development Yet post socialist modernisation has not been without its contradictions manifesting in increasing social and territorial inequalities Recent studies also suggest there are apparent limits to post socialist growth models accompanying a new set of challenges within an increasingly uncertain world Aiming to deliver a new synthesis of regional development issues at the crossroads between post socialism and post transition this book identifies the main driving forces of spatial restructuring in Central and Eastern Europe and charts the different regional development paths which take shape against the backdrop of post crisis Europe A comparative approach is used to highlight common development challenges and the underlying patterns of socio economic differentiation alike The issues investigated within the Handbook extend to a discussion of the varied economic consequences of transition the social structures and institutional systems which underpin development processes and the broadly understood sustainability of Central and Eastern Europe s current development model This book will be of interest to academics and policymakers working in the fields of regional studies economic geography development studies and policy **Interdisciplinary Information Sciences** , 2007 *Handbook of Regional Growth and Development Theories*

Roberta Capello, Peter Nijkamp, 2010-01-01 This Handbook is essential reading for anyone with an interest in the explanation of economic growth in the space economy The editors and the individual contributors are to be congratulated on producing such an important collection of review essays which is destined to become one of the definitive reference books on the subject John McCombie Scienze Regionali offers a valuable up to date overview of many aspects of these important theoretical developments Peter Wood Environment development theories of innovation knowledge and space and regional production factors and growth theories and space This book will be a source of reference and information for both scholars and students in the area of regional economics
