Connected Code Yasmin B. Kafai,Quinn Burke,2016-09-02 Why every child needs to learn to code the shift from computational thinking to computational participation Coding once considered an arcane craft practiced by solitary techies is now recognized by educators and theorists as a crucial skill even a new literacy for all children Programming is often promoted in K 12 schools as a way to encourage computational thinking which has now become the umbrella term for understanding what computer science has to contribute to reasoning and communicating in an ever increasingly digital world In Connected Code Yasmin Kafai and Quinn Burke argue that although computational thinking represents an excellent starting point the broader conception of computational participation better captures the twenty first century reality Computational participation moves beyond the individual to focus on wider social networks and a DIY culture of digital making Kafai and Burke describe contemporary examples of computational participation students who code not for the sake of coding but to create games stories and animations to share the emergence of youth programming communities the practices and ethical challenges of remixing rather than starting from scratch and the move beyond stationary screens to programmable toys tools and textiles
