Rosacea and Couperosis in Cosmetic Dermatology & Skincare Practice Elena Hernandez-Jimenez, 2024-06-26 Rosacea on average affects 5% of all people on Earth and couperosis is a problem for a considerable number of fair skinned people that catches up with them if not in their youth then as they age is one of the symptoms of photoaging Therefore any specialist working with skin cannot avoid encountering these conditions However even though rosacea was regarded exclusively as a dermatological problem for a long time and couperosis was deemed virtually impossible to cope with modern research and developments in the field of dermatology give specialists a variety of working tools to correct these unpleasant aesthetic defects The specialty of our book is that we look at cosmetic approaches that can help patients with rosacea and couperosis We not only vouch that these approaches work but know from experience that cosmetic care can slow down the progression of these diseases Thus it not only saves patients from aggressive dermatologic treatment but also significantly improves their quality of life This publication will detail the current understanding of the etiology and pathogenesis of rosacea We consider these facts important to know because recent research has dramatically changed the primary image of the disease and the treatment approaches We now understand that what used to be considered a cure by dermatologists may sometimes worsen the skin condition of rosacea patients We will thus examine in detail how to build a primary therapy based on these modern findings what methods and products can be used and what should be excluded from therapy and care programs offered to patients with rosacea The same applies to couperosis as we will once again explain this condition and how it differs from rosacea allowing specialists to apply the most

effective therapy particularly laser treatment How do these methods work How to prepare and protect the skin Whether there is an effect from topical and injectable methods and what kind of effect All these questions are discussed in detail in the relevant sections This book is a must read for all specialists in aesthetic medicine students pursuing degrees in dermatological specialties and even patients who want to effectively resolve the problems of rosacea and couperosis

Oily Skin, Acne, and Post-Acne in Cosmetic Dermatology & Skincare Practice Elena Hernandez-Jimenez, 2024-08-07 Many books have been written about acne but all focus on drug therapy Unfortunately the possibilities of modern skincare and aesthetic tools in helping patients with acne are still underestimated We decided to correct this injustice and created a book in which we present skincare and aesthetic tools methods and approaches to preventing and treating this disease The application of each method is justified in terms of the pathogenesis of acne and is supported by research findings Describing the events that unfold in the skin after a particular treatment helps in elucidating its clinical possibilities and limitations Significant advantages of the book are clear language although we write about complicated things and use medical and scientific terminology the information can be understood even by laypeople and structure all cause and effect connections become apparent there is a complete understanding of what needs to be done and why The book consists of four parts The first part

discusses the clinical signs and stages of acne and distinguishes the acne types amenable to skincare treatments from those that are not. The second part deals with the diagnosis of acne. It presents recommendations on visual examination and anamnesis collection and discusses the need for clarifying laboratory test results. Much attention is paid to the differential diagnosis of acne with dermatoses like Malassezia folliculitis, rosacea and demodicosis. The third part presents the factors contributing to the development of acne, explains the pathogenesis of this disease and outlines the targets to be treated and prevented.
