Making Health Certain:

Making Health Policy Andy Alaszewski, Patrick Brown, 2013-12-23 This new textbook opens up the policy making process for students uncovering how government decisions around health are really made Starting from more traditional insights into how ministers and civil servants develop policy with limited knowledge and money the book goes on to challenge the conception of policy as a rational process revealing it to be something quite different Knee jerk reactions to disasters keeping voters satisfied the powerful leverage of interest groups and the skewing of debate through ideology and the media are each considered in turn These processes render policy far from rational or at least require a much broader approach for considering policy logic one that is open to different rationalities of values norms and pragmatism The book draws on historical and contemporary examples to highlight that though challenges to policy makers may seem in some ways novel in many senses key processes endure and indeed are rooted in historical contexts Although the examples are drawn from UK health and social care the book's theory driven approach is applicable across national contexts especially for countries where uncertainty risk and resource pressures create significant dilemmas for policy makers The book's multi perspective thematic approach will be especially relevant to students as will the broad range of case study examples used Making Health Policy will be essential reading for students of health policy social policy social work and the sociology of medicine health and illness

Thomasma, David N. Weisstub, 2012-11-07 Moral capacity is an important feature of what it means to be human In this volume the contributors have taken on the daunting task of trying to distinguish between legal and moral capacity This distinction is difficult at times for clinicians philosophers and legal scholars alike Part of the challenge of defining moral capacity lies in the difficulty of adequately categorizing it For this reason the editors have chosen to divide the book into three parts The first looks at the concepts involved in the discussion of moral capacity the second considers the role of moral capacity in the lives of professionals and the final part reflects on case studies of moral capacity or incapacity illustrating the challenge that moral capacity presents its definition lying between two seemingly incommensurable models those of the threshold and continuum This volume takes a multidisciplinary approach to the subject and ties the disciplines of medicine philosophy and law into the health context It will be of interest to medical health professionals as well as researchers working in the areas of philosophy and law **Health and the Good Society** Alan Cribb, 2005-10-13 The goals of healthcare and health policy and the health related dilemmas facing policy makers professionals and citizens are extensively analysed and debated in a range of disciplines including public health sociology and applied philosophy *Health and the Good Society* is the first full length work that addresses these debates in a way that cuts across these disciplinary boundaries Alan Cribb's core argument is that clinical ethics needs to be understood in the context of public health ethics This entails healthcare ethics embracing the social dimension of health in two overlapping senses first the various respects in which health experiences and outcomes are socially determined and second the ways in which health related goods are better understood as social rather than purely individual goods This broader approach to the Ethics of healthcare includes a concern with the social construction of both healthcare goods and the roles ideals and obligations of agents that is to say it focuses upon the value field of health related action and not only upon the ethics of action within this value field This groundbreaking book thus seeks to open up the agenda of healthcare ethics both methodologically and substantively it

argues that population oriented perspectives are central to all healthcare ethics and that everybody has some share of responsibility for securing health related goods including the good of greater health equality One of its major conclusions is that the rather limited tradition of health education policy and practice needs a complete re think **Congressional Record** United States.
