**Science at Harvard University** Clark A. Elliott, Margaret W. Rossiter, 1992-02 This collection of original historical essays examines aspects of the relationship between science and the nation's oldest academic institution This is history as viewed from the varying perspectives of a group of scholars for whom science at Harvard University is a significant component of their ongoing research Thus the essays are of specialist interest while collectively the volume is a case study of science in an institutional setting In conducting their research the authors have used a wealth of primary sources from the Harvard Archives and other repositories The volume opens with a thematic introduction by Margaret Rossiter reflecting the picture of Harvard science drawn in the several papers in the volume while suggesting ways in which a study of Harvard relates to and illuminates the history of science in America The subsequent papers follow a generally chronological sequence beginning with Sara Schechner Genuth's study of attitudes toward comets in relation to early Harvard University programs and functions Mary Ann James examines the beginnings of applied science at Harvard and Bruce Sinclair continues that theme with a comparative study of MIT and Harvard Toby Appel's paper on zoologist Jeffries Wyman identifies the special part that personal character plays in institutional history Curtis Hinsley concentrates on facilities and shows how the Peabody Museum gave rise to teaching in anthropology David Livingstone's biographical treatment of Nathaniel S Shaler reveals a number of intellectual strands running through the University in the late nineteenth century and John Parascandola's paper on L J

Henderson likewise deals with a figure of wide influence and many interests ranging from biochemistry to sociology The latter topic leads to Lawrence Nichols s account of the rise of sociology at Harvard A view of the internal tensions within psychology are seen in Rodney Triplet s study of Henry A Murray I Bernard Cohen examines the relations among Howard Aiken IBM and Harvard in the development of the Mark I computer while Peggy Kidwell studies the Observatory community during World War II and its response to national defense and a developing federal support system Finally Clark Elliott considers the history of Harvard science as a field for study through a review of published literature and archival sources and makes suggestions for further investigation

The Culture Concept Michael A. Elliott,2002 Culture is a term we commonly use to explain the differences in our ways of living In this book Michael A Elliott returns to the moment this usage was first articulated tracing the concept of culture to the writings folktales dialect literature local color sketches and ethnographies that provided its intellectual underpinnings in turn of the century America The Culture Concept explains how this now familiar definition of culture emerged during the late nineteenth century through the intersection of two separate endeavors that shared a commitment to recording group based difference American literary realism and scientific ethnography Elliott looks at early works of cultural studies as diverse as the conjure tales of Charles Chesnutt the Ghost Dance ethnography of James Mooney and the prose narrative of the Omaha anthropologist turned author Francis La Flesche His reading of these works which struggle to find appropriate theoretical and textual tools for articulating a less chauvinistic understanding of human difference is at once a recovery of a lost connection between American literary realism and ethnography and a productive inquiry into the usefulness of the culture concept as a critical tool in our time and times to come

**The Poetics of National and Racial Identity in Nineteenth-Century American Literature** John D. Kerkerling,2003-12-11 John D Kerkerling s study examines the literary history of racial and national identity in nineteenth century America Kerkerling argues that writers such as DuBois Lanier Simms and Scott used poetic effects to assert the distinctiveness of certain groups in a diffuse social landscape Kerkerling explores poetry s formal properties its sound effects as they intersect with the issues of race and nation He shows how formal effects ranging from meter and rhythm to alliteration and melody provide these writers with evidence of a collective identity whether national or racial Through this shared reliance on formal literary effects national and racial identities Kerkerling shows are related elements of a single literary history This is the story of how poetic effects helped to define national identities in Anglo America as a step toward helping to define racial identities within the United States This highly original study will command a wide audience of Americanists

**William Stimpson and the Golden Age of American Natural History** Ronald Scott Vasile,2018-06-19 William Stimpson was at the forefront of the American natural history community in the latter half of the nineteenth century Stimpson displayed an early affinity for the sea and natural history and after completing an apprenticeship with famed naturalist Louis Agassiz he became one of the

first professionally trained naturalists in the United States In 1852 twenty year old Stimpson was appointed naturalist of the United States North Pacific Exploring Expedition where he collected and classified hundreds of marine animals Upon his return he joined renowned naturalist Spencer F Baird at the Smithsonian Institution to create its department of invertebrate zoology He also founded and led the irreverent and fun loving Megatherium Club which included many notable naturalists In 1865 Stimpson focused on turning the Chicago Academy of Sciences into one of the largest and most important museums in the country Tragically the museum was destroyed in the Great Chicago Fire of 1871 and Stimpson died of tuberculosis soon after before he could restore his scientific legacy This first ever biography of William Stimpson situates his work in the context of his time As one of few to collaborate with both Agassiz and Baird Stimpson s life provides insight into the men who shaped a generation of naturalists the last before intense specialization caused naturalists to give way to biologists Historians of science and general readers interested in biographies science and history will enjoy this compelling biography

*Biologists and the Promise of American Life* Philip J. Pauly, 2018-06-05 Explorers evolutionists eugenicists sexologists and high school biology teachers all have contributed to the prominence of the biological sciences in American life In this book Philip Pauly weaves their stories together into a fascinating history of biology in America over the last two hundred years Beginning with the return of the Lewis and Clark expedition in 1806 botanists and zoologists identified science with national culture linking their work to continental imperialism and the creation of an industrial republic Pauly examines this nineteenth century movement in local scientific communities with national reach the partnership of Asa Gray and Louis Agassiz at Harvard University the excitement of work at the Smithsonian Institution and the Geological Survey and disputes at the Agriculture Department over the continent s future He then describes the establishment of biology as an academic discipline in the late nineteenth century and the retreat of life scientists from the problems of American nature The early twentieth century however witnessed a new burst of public oriented activity among biologists Here Pauly chronicles such topics as the introduction of biology into high school curricula the efforts of eugenicists to alter the breeding of Americans and the influence of sexual biology on Americans most private lives Throughout much of American history Pauly argues life scientists linked their study of nature with a desire to culture to use intelligence and craft to improve American plants animals and humans They often disagreed and frequently overreached but they sought to build a nation whose people would be prosperous humane secular and liberal Life scientists were significant participants in efforts to realize what Progressive Era oracle Herbert Croly called the promise of American life Pauly tells their story in its entirety and explains why now in a society that is rapidly returning to a complex ethnic mix similar to the one that existed for a hundred years prior to the Cold War it is important to reconnect with the progressive creators of American secular culture Militarism, Imperialism, and Racial Accommodation (c) ,1992 1993 Mid South Sociological Association Book Award Robert E Park has long been recognized as one of the most influential thinkers in early American sociology yet virtually all of his works appearing before 1913 were

published in popular magazines and were dismissed as nonsociological muckraking In *Militarism Imperialism and Racial Accommodation An Analysis and Interpretation of the Early Writings of Robert E Park* Stanford M Lyman examines and reprints many of these little known works including Park s essays on German military organization his expos s of the atrocities committed by Belgium s Leopold II in the Congo State his studies of the black community in Winston Salem North Carolina and of Booker T Washington s agricultural education program at Tuskegee Alabama Lyman shows clearly that Park s essays written outside the academy formulated a far more complex perspective on modern modes of evil than any proposed by his contemporaries thereby influencing sociological debates for decades to come By writing his essays on topical subjects and by publishing them for a public audience Park dramatized his profound belief that the struggle to achieve racial accommodation and to establish a true and lasting democracy is a concern for all

explorations of maps created during this period show how these new ways of representing the world and its peoples influenced conceptions of the nature and progress of human societies while studies of the travels of people and ideas reveal the influence of far flung places on Enlightenment science and scientific credibility The final set of chapters emphasizes the role of particular local contexts in Enlightenment thought Contributors are Michael T Bravo Paul Carter Denis Cosgrove Stephen Daniels Matthew Edney Anne Marie Claire Godlewska Peter Gould Michael Heffernan David N Livingstone Dorinda Outram Chris Philo Roy Porter Nicolaas Rupke Susanne Seymour Charles Watkins and Charles W J Withers

*Bully for Brontosaurus: Reflections in Natural History* Stephen Jay Gould, 2010-11-29 Provocative and delightfully discursive essays on natural history Gould is the Stan Musial of essay writing He can work himself into a corkscrew of ideas and improbable allusions paragraph after paragraph and then uncoiling hit it with such power that his fans know they are experiencing the game of essay writing at its best John Noble Wilford New York Times Book Review

*Darwin's Forgotten Defenders* David N. Livingstone, 1997 This book is the first systematic investigation of the response of evangelical intellectuals in the nineteenth and early twentieth centuries to Darwin's evolutionary theories Despite evidence to the contrary many people continue to believe that warfare between science and religion over the issue of evolution broke out as soon as Darwin published *The Origin of the Species* in 1859 In fact as David Livingstone points out a substantial number of that era's leaders in science and technology had little trouble reconciling their conservative theological views to Darwin's new theories The author contends that the sort of pitched battle being waged by the creationist movement today has its roots not in the evangelical heritage of the nineteenth century but in the fundamentalism that emerged during the early decades of the twentieth century This study which sheds new light on previously neglected aspects of the Darwinian controversies should have appeal for all who are interested in the relationship between science and religion from back cover
