lower respiration, increased growth due to CO_2 fertilization and changes in temperature and precipitation, and suppressed CO_2 input to the atmosphere as a result of exceptional El Niño events. Otherwise the new data of Etheridge *et al.* (17) are consistent with the Siple CO_2 data and estimates of carbon fluxes derived therefrom. These invoke rising CO_2 beginning around 1780, with the biosphere as the major source. Fossil fuel becomes the dominant source around 1910. The biosphere continues to be a source until 1940 in the deconvolution of Siegenthaler and Oeschger (20), when it becomes neutral, and 1970 in the deconvolution of Keeling *et al.* (21), when it becomes a sink.

CH_4 . Two recent records (19, 22) supplement earlier work of Craig and Chou (23), Etheridge *et al.* (24), Khalil and Rasmussen (25), and Stauffer *et al.* (26) to provide a detailed curve of the anthropogenic increase in atmospheric CH_4 . The results of Blunier *et al.* (22) suggest a stable preindustrial value of about 720 ppbv over Antarctica between about 1000 A.D. and 1750 A.D. The Antarctic concentration rise after 1840, as measured in the DE 08 core by Etheridge *et al.* (24), is shown in Fig. 3.

The factors maintaining the preanthropogenic CH_4 background, and those responsible for the anthropogenic increase,

The Science of Science Communication III National Academy of Sciences, 2018-06-01 Successful scientists must be effective communicators within their professions Without those skills they could not write papers and funding proposals give talks and field questions or teach classes and mentor students However communicating with audiences outside their profession people who may not share scientists interests technical background cultural assumptions and modes of expression presents different challenges and requires additional skills Communication about science in political or social settings differs from discourse within a scientific discipline Not only are scientists just one of many stakeholders vying for access to the public agenda but the political debates surrounding science and its applications may sometimes confront scientists with unfamiliar and uncomfortable discussions involving religious values partisan interests and even the trustworthiness of science *The Science of Science Communication III* Inspiring Novel Collaborations and Building Capacity summarizes the presentations and discussions from a Sackler Colloquium convened in November 2017 This event used *Communicating Science Effectively* as a framework for examining how one might apply its lessons to research and practice It considered opportunities for creating and applying the science along with the barriers to doing so such as the incentive systems in academic institutions and the perils of communicating science in polarized environments Special attention was given to the organization and infrastructure necessary for building capacity in science communication

Nuclear Power or a Promise Lost Edward T. Burns, 2020-05-01 This book captures the status of current electrical energy markets including the principal forces affecting decisions on selecting an energy source It represents a seminal work that lays out the electrical energy decision tree for selecting an energy source in a world that is on the verge of catastrophic global warming because of the choices that have been made in the name of cheap energy The impetus for this book includes the dire need to mitigate continued anthropogenic causes of global warming by turning to carbon free energy sources Nuclear energy represents such a carbon free energy source and could be a partial solution to the existential threat facing future society the threat of a

warming planet and its consequential catastrophic effects on future generations The world is at a crossroads in human interaction with their environment The effects of radiation and the relationship of nuclear power to nuclear weapons are both discussed in an understandable and compelling manner Nuclear energy is contrasted with other energy sources including fossil fuels and renewable energy sources regarding the risks and benefits imposed by each Important personalities and world events that shaped nuclear power's development are recounted The historical origins of nuclear power are outlined and the continued impetus to include nuclear power as part of the electric grid energy mix is assessed exposing the obstacles and road blocks to the continued use of nuclear power Specific attention is paid to revealing the causes and lessons learned from the three severe accidents in commercial nuclear plants TMI 2 Chernobyl and Fukushima An extensive discussion of nuclear waste disposal is provided as part of the decision tree for energy selection The context for the future of nuclear power as a viable energy source is illuminated by the current battle between economic growth and the harm created by burning fossil fuels The status of the world's climate and projections for the disruptive effects of global warming on future populations migration economics and world strife are debated against the backdrop of an increasing world population and the drive by developing nations to achieve economic parity with the industrialized nations Within the context of increased world strife the quest by nations to obtain nuclear weapons is also discussed The steps taken by the world to limit nuclear weapons proliferation are examined with emphasis on potential links between nuclear power generation and access to nuclear weapons The final chapter discusses the moral responsibility of current generations with respect to future generations specifically the applicability of intergenerational equity in political and social decision making regarding the actions that add to global warming and those risk averse actions that can be taken to minimize global warming

technological development and societies efforts to achieve environmentally sustainable improvements in human well being The book argues that societies should approach sustainable development not as a destination but as an ongoing adaptive learning process Speaking to the next two generations it proposes a strategy for using scientific and technical knowledge to better inform future action in the areas of fertility reduction urban systems agricultural production energy and materials use ecosystem restoration and biodiversity conservation and suggests an approach for building a new research agenda for sustainability science Our Common Journey documents large scale historical currents of social and environmental change and reviews methods for what if analysis of possible future development pathways and their implications for sustainability The book also identifies the greatest threats to sustainability in areas such as human settlements agriculture industry and energy and explores the most promising opportunities for circumventing or mitigating these threats It goes on to discuss what indicators of change from children s birth weights to atmosphere chemistry will be most useful in monitoring a transition to sustainability
