## **National Curriculum Science So Near And Yet So Far:**

**National Curriculum Science** Arthur Jennings,1992 So Near and Yet So Far      **Teaching Science** Jenny Frost,Richard B. Ingle,2014-02-25 First published in 1995 This teaching book is packed with practical ideas and advice for the beginning science teacher It is based on three simple principles regarding teaching methods a principle of variety a principle of careful and appropriate choice and a principle of skilful and carefully prepared implementation Through a wide range of examples the authors discuss in richly illustrated detail what these principles involve in practice All the examples are real ones taken from recent classroom experience made more vivid by a large collection of photographs documenting the steps and phases involved in each kind of approach      *School Subject Teaching* Ashley Kent,2013-12-19 Covering each of the core curriculum areas in turn this is a reference on school subject teaching The authors assess the development of teaching within each subject area since the 1944 Education Act up to the year 2000 Future challenges are also explored

Good Practice in Science Teaching: What Research Has to Say Jonathan Osborne,Justin Dillon,2010-05-16 The book has wide appeal in that the issues investigated for example the nature of science practical work the role of language of technology and formative and summative assessment are relevant and pertinent to science teachers work in all school systems Professor David F Treagust Curtin University of Technology Australia This new edition of Good Practice in Science Teaching offers a comprehensive overview of the major areas of research and scholarship in science education Each chapter summarizes the research work and evidence in the field and discusses its significance reliability and implications for the practice of science teaching Thoroughly revised throughout the new edition includes Three new chapters covering the learning of science in informal contexts teacher professional development and technology mediated learning Updates to every chapter reflecting the changes and developments in science education Further reading sections at the end of each chapter Each chapter has been written by science education researchers with national or international reputations Each topic is approached in a straight forward manner and is written in a concise and readable style This invaluable guide is ideal for science teachers of children of all ages and others who work in teaching and related fields It is an essential text for teachers in training and those studying for higher degrees Contributors Philip Adey Paul Black Maria Evagorou John Gilbert Melissa Glackin Christine Harrison Jill Hohenstein Heather King Alex Manning Robin Millar Natasha Serret Shirley Simon Julian Swain Mary Webb      **Issues in Science Teaching** John Sears,Pete Sorenson,2005-08-18 Issues in Science Teaching covers a wide range of important issues which will interest teachers at all phases in the education system The issues discussed include the nature and purposes of science education in a multicultural society including the idea of science for all the role and purposes of investigational work in science education assessment curriculum progression and pupil attitudes to their science experience supporting basic skills development in literacy numeracy and ICT through science teaching supporting cross curricular work through science teaching taking account of individual differences including ability special

needs learning style and the case for inclusion The articles are strongly based on current research and are intended to stimulate and broaden debate among the readers Written by practising science educators and teachers this book offers new and interesting ways of developing science education at all levels Understanding Teacher Expertise in Primary Science Anna Traianou,2007-01-01 What does it mean to be an expert primary science practitioner How do primary teachers use science subject knowledge in their practice This book addresses these questions from a sociocultural perspective challenging currently influential constructivist accounts It treats the nature of teacher expertise as a dynamic capacity exemplified by those who are recognised as experts in their local communities of practice In line with this it provides an in depth case study of the perspective and practices of a primary science teacher who is locally and more widely recognised as an expert practitioner One of the conclusions is that primary science expertise is eclectic in character requiring the employment in a flexible way of a variety of forms of knowledge views of learning and teaching strategies in order to deal successfully with the contingent situations faced in the classroom The study of expertise in action is particularly important at a time when teaching is increasingly configured in terms of competencies and standards Its implications for the education of primary science practitioners are profound Students on education courses teachers and researchers will find this book of value for its careful exploration of arguments about the nature of knowledge and learning and how these are implicated in classroom practice
