existing oral histories extensive use of NSF documents and the experience of two of the authors as senior managers this book
describes how NSF s programmatic activities originated and evolved to become the primary source of funding for
fundamental research in computing and information technologies The book traces how NSF s support has provided facilities
and education for computing usage by all scientific disciplines aided in institution and professional community building
supported fundamental research in computer science and allied disciplines and led the efforts to broaden participation in
computing by all segments of society Today the research and infrastructure facilitated by NSF computing programs are
significant economic drivers of American society and industry For example NSF supported work that led to the first widely
used web browser Netscape sponsored the creation of algorithms at the core of the Google search engine facilitated the
growth of the public Internet and funded research on the scientific basis for countless other applications and technologies
NSF has advanced the development of human capital and ideas for future advances in computing and its applications This
account is the first comprehensive coverage of NSF s role in the extraordinary growth and expansion of modern computing
and its use It will appeal to historians of computing policy makers and leaders in government and academia and individuals

Subcommittee on Science, Research, and Technology, 1988 *Handbook of Human-Computer Interaction* M.G. Helander, 2014-06-28 This Handbook is concerned with principles of human factors engineering for design of the human computer interface It has both academic and practical purposes it summarizes the research and provides recommendations for how the information can be used by designers of computer systems The articles are written primarily for the professional from another discipline who is seeking an understanding of human computer interaction and secondarily as a reference book for the professional in the area and should particularly serve the following computer scientists human factors engineers designers and design engineers cognitive scientists and experimental psychologists systems engineers managers and executives working with systems development The work consists of 52 chapters by 73 authors and is organized into seven sections In the first section the cognitive and information processing aspects of HCI are summarized The following group of papers deals with design principles for software and hardware The third section is devoted to differences in performance between different users and computer aided training and principles for design of effective manuals The next part presents important applications text editors and systems for information retrieval as well as issues in computer aided engineering drawing and design and robotics The fifth section introduces methods for designing the user interface The following section examines those issues in the AI field that are currently of greatest interest to designers and human factors specialists including such problems as natural language interface and methods for knowledge acquisition The last section includes social aspects in computer usage the impact on work organizations and work at home **DISTRIBUTED OPERATING SYSTEMS** SINHA, PRADEEP K., 1998-01-01 The highly praised book in communications networking from IEEE Press now available in the Eastern Economy Edition This is a non mathematical introduction to Distributed Operating Systems explaining the fundamental concepts and design principles of this emerging technology As a textbook for students and as a self study text for systems managers and software engineers this book provides a concise and an informal introduction to the subject Computer Books and Serials in Print , 1985 **Software System Design Methods** Josef K. Skwirzynski, 2012-12-06 In this volume we present the full proceedings of a NATO Advanced Study Institute ASI on the theme of the challenge of advanced computing technology to system design methods This is in fact the second ASI organised by myself and my colleagues in the field of systems reliability the first was about Electronic Systems Effectiveness and Life Cycle Costing and the proceedings were published by the same publisher in 1983 as Series F Computer and System Sciences No 3 The first part of the present proceedings concentrates on the development of low fault and fault tolerant software In organising this session I was greatly helped by Mr John Musa and Professor V R Basili The latter and Or R W Selby open our text with their interesting approach to the problem of data collection and of observation sampling for statistical analysis of software development software testing strategies and error analysis The problem of clean room software development is also

considered Next Professor B Randell discusses recursively structured fault tolerant distributed computer systems and bases his approach on a UNIX system example His aim is to establish that a distributed system should be functionally equivalent to an individual computing system Or L F Pau considers knowledge engineering techniques applied to fault detection test generation and maintenance of software This is illustrated by a variety of examples such as electronic failure detection control system testing analysis of intermittent failures false alarm reduction and others Following this Mr M
