Handbook of Antioxidants for Food Preservation Fereidoon Shahidi, 2015-02-25 Lipid oxidation in food leads to rancidity which compromises the sensory properties of food and makes it unappealing to consumers The growing trend towards natural additives and preservatives means that new antioxidants are emerging for use in foods This book provides an overview of the food antioxidants currently available and their applications in different food products Part one provides background information on a comprehensive list of the main natural and synthetic antioxidants used in food Part two looks at methodologies for using antioxidants in food focusing on the efficacy of antioxidants Part three covers the main food commodities in which antioxidants are used Reviews the various types of antioxidants used in food preservation including chapters on tea extracts natural plant extracts and synthetic phenolics Analyses the performance of antioxidants in different food systems Compiles significant international research and advancements

Food Oxidants and Antioxidants Grzegorz Bartosz, 2013-06-21 Food antioxidants are of primary importance for the preservation of food quality during processing and storage However the status of food depends on a balance of antioxidants and prooxidants occurring in food Food Oxidants and Antioxidants Chemical Biological and Functional Properties provides a single volume reference on the effects of naturally occurring and process generated prooxidants and antioxidants on various aspects of food quality The book begins with a general introduction to oxidation in food and then characterizes the main oxidants present in food including enzymatic oxidants Chapters cover oxidation potential mechanisms of oxidation of the main food components proteins and lipids addition of exogenous oxidants during food processing and the effects of physical agents such as irradiation freeze thawing and high hydrostatic pressure during processing The book also discusses the effects of oxidation on sensory characteristics of food components and analyzes how oxidation and antioxidants affect the nutritive and health promoting features of food components The text examines natural antioxidants in food including lesser known ones such as

amino acids and polysaccharides antioxidants generated in food as a result of processing mechanisms of antioxidant activity and measurement of antioxidant activity of food components It explores the bioavailability of curcuminoid and carotenoids antioxidants and presents case studies on natural food antioxidants presenting novel extraction methods for preservation of antioxidant activity The final chapters address functional antioxidant foods and beverages as well as general ideas on the effects of food on the redox homeostasis of the organism
