highly vulnerable to climate change as hazards continue to intensify with global disasters projected to reach 560 events per year by 2030 or 1.5 events every day. The accelerating frequency and intensity of disasters underscores the urgency to prepare for severe events to protect people, communities and essential systems but also to protect the environment which provides shelter, livelihoods, cultural heritage and public functions. This book provides a comprehensive reference of climate adaptation design tactics and a toolkit for adaptation to shocks and stresses, outlining the process for architects and designers to understand the risks posed by climate change to the built environment. Reduce the risks to people and the built environment from natural hazards. Reduce human vulnerability to shocks and stresses by strengthening resilience and adaptive capacity. Design the built environment to adapt to changes over its lifetime. Design buildings and cities to reduce dependence on fossil fuels. Preserve biodiversity and support natural resources. Climate Adaptation for Architects presents 45 adaptation tactics responding to the most consequential effects of climate change: heat, water, wind and resource scarcity. Each chapter includes images, a definition, background information, key design considerations, potential impacts and resources for further information. This is a valuable resource for every architect, landscape architect, urban planner, developer and policymaker.

Elements of Sustainable Architecture Rosa Urbano Gutiérrez, Laura de la Plaza Hidalgo, 2019-12-06. For sustainable architecture to become a reality, the way we design buildings needs to change. Many architects are concerned that sustainable technologies may interfere with a building's aesthetic appearance and so these are often added on once the design process is complete. Elements of Sustainable Architecture solves this dilemma by helping students to develop the design skills they need to create sustainable buildings, ensuring that ecological considerations are applied throughout the design process. Restoring the primacy of aesthetics and creativity to sustainable design, the book focuses on strategies that have the greatest impact on building design. It also shows the influence of sustainability considerations on choices about aspects such as composition, form, space, tectonics, materials, colour, textures, proportion and position. Specifically designed to offer a new way of understanding architecture, the book introduces students to the basic principles and methods of sustainable design, features current examples and inspiring case studies to support learning, step by step, presents information in a visually appealing, intuitive, easy to understand way, includes over 500 high quality colour diagrams, drawings, sketches and photographs. A clear visual

introduction to creating aesthetically beautiful and sustainable buildings this is essential reading for students in sustainable architecture courses

Geo-Space Urban Design Gideon S. Golany, Toshio Ojima, 1996-09-03 Visit any large metropolitan area in the world and you will feel the urgent need for innovative solutions to the many problems that face the modern urban center. *Geo Space Urban Design* offers a revolutionary proposal that will lead future urban growth quite literally in a different direction. Gideon Golany and Toshio Ojima clearly demonstrate that subsurface urban expansion is not only practical and feasible but also that it can reverse many of the negative effects normally associated with urban expansion. They present a comprehensive and systematic plan for developing underground spaces for transportation, delivery systems, infrastructure, residences, shopping and commercial spaces and social and cultural activities. The authors focus on integrating geo space with existing above ground structures and offer well illustrated examples of specific design theories and methods. They also anticipate a variety of contingent issues such as land ownership, legal rights and psychological adjustment to underground living and working. Three case studies of Japanese projects that use underground space for shopping, transportation and infrastructure explore the entire spectrum of issues surrounding the design, construction and ongoing operation of the facility, including form, function and efficiency, health, safety and comfort, legal issues and special management and security considerations. Geo space projects in Montreal and Paris are also examined. *Geo Space Urban Design* appeals to a broad range of professionals all of whom have important roles to play in the creation and operation of the cities of the future. For urban designers, architects and civil and architectural engineers, this book offers both an eye opening vision and a challenge to create viable space that will revolutionize urban life. Landscape architects, geographers and environmentalists will find opportunities to redefine the relationship between society and the natural world and psychologists, social scientists and government officials will discover new levels of human adaptability, interaction and cooperation. In this revolutionary book, two leading figures explain how geo space design and construction will enable urban planners to cope with the most difficult challenges posed by the continued expansion of metropolitan areas, including land preservation, conserving precious agricultural land in the face of rapid urban expansion, high urban land prices, making economical use of limited space in urban centers with soaring property values, efficient urban scale, shrinking overextended and inefficient utility networks, response to stressful climate, reducing energy consumption in regions subject to extremes of hot or cold weather. The authors explore every facet of geo space and point out the challenges and opportunities these projects will hold for urban designers, architects, civil engineers, architectural engineers, landscape architects, geographers, environmentalists, psychologists, social scientists and government officials.
