New Economy Of Nature The Quest To Make Conservation Profitable:

The New Economy of Nature Gretchen Cara Daily, Katherine Ellison, 2012-09-26 Why shouldn't people who deplete our natural assets have to pay and those who protect them reap profits? Conservation-minded entrepreneurs and others around the world are beginning to ask just that question as the increasing scarcity of natural resources becomes a tangible threat to our own lives and our hopes for our children. The New Economy of Nature brings together Gretchen Daily, one of the world's leading ecologists, with Katherine Ellison, a Pulitzer prize-winning journalist, to offer an engaging and informative look at a new economy—a system recognizing the economic value of natural systems and the potential profits in protecting them. Through engaging stories from around the world, the authors introduce readers to a diverse group of people who are pioneering new approaches to conservation. We meet Adam Davis, an American business executive who dreams of establishing a market for buying and selling ecosystem service units; John Wamsley, a former math professor in Australia who has found a way to play the stock market and protect native species at the same time; and Dan Janzen, a biologist working in Costa Rica who devised a controversial plan to sell a conservation area's natural waste disposal services to a local orange juice producer. Readers also visit the Catskill Mountains where the City of New York purchased undeveloped land instead of building an expensive new water treatment facility, and King County, Washington, where county executive Ron Sims has dedicated himself to finding ways of making the market move to protect the county's remaining open space. Daily and Ellison describe the dynamic interplay of science, economics, business, and politics that is involved in establishing these new approaches and examine what will be needed to create successful models and lasting institutions for conservation. The New Economy of Nature presents a fundamentally new way of thinking about the environment and about the economy, and with its fascinating portraits of charismatic pioneers, it is as entertaining as it is informative.

Sustainable Financing of Protected Areas Lucy Emerton, Joshua Bishop, Lee Thomas, 2006 It has become clear during recent global deliberations on biodiversity conservation that achieving Protected Area (PA) financial sustainability will require major changes in the way that PA funding is conceptualized, captured, and used. With many, if not most, PAs facing funding crises both in terms of the amount of funds available and how those are used, there is an urgent need to expand and diversify PA financial portfolios and to ensure that funding reaches the groups and activities essential for biodiversity conservation. A range of innovative financing mechanisms have been developed and implemented to increase funding for PAs. This document aims to review and assess the status of a variety of these mechanisms, the major obstacles and opportunities for their implementation, and the potential for improvement.

[Routledge Handbook of Religion and Ecology](#) Willis Jenkins, Mary Evelyn Tucker, John Grim, 2016-07-22 The moral values and interpretive systems of religions are crucially involved in how people imagine the challenges of sustainability and how societies mobilize to enhance ecosystem resilience and human well-being. Dodging Extinction Anthony D. Barnosky, 2016-08-16

Our Once and Future Planet Paddy Woodworth, 2013-10-15

The environmental movement is plagued by pessimism And that's not unreasonable with so many complicated seemingly intractable problems facing the planet coupled with a need to convince people of the dangers we face it's hard not to focus on the negative But that paints an unbalanced and overly disheartening picture of what's going on with environmental stewardship today There are success stories and *Our Once and Future Planet* delivers a fascinating account of one of the most impressive areas of current environmental experimentation and innovation ecological restoration Veteran investigative reporter Paddy Woodworth has spent years traveling the globe and talking with people scientists politicians and ordinary citizens who are working on the front lines of the battle against environmental degradation At sites ranging from Mexico to New Zealand and Chicago to Cape Town Woodworth shows us the striking successes and a few humbling failures of groups that are attempting to use cutting edge science to restore blighted polluted and otherwise troubled landscapes to states of ecological health and in some of the most controversial cases to particular moments in historical time before widespread human intervention His firsthand field reports and interviews with participants reveal the promise power and limitations of restoration Ecological restoration alone won't solve the myriad problems facing our environment But *Our Once and Future Planet* demonstrates the role it can play and the hope inspiration and new knowledge that can come from saving even one small patch of earth

Economic Reason and Political Reason Jean Mercier Ythier, 2023-01-12 The public space of democracies is constructed in a context that is marked by the digital transformation of the economy and society. This construction is carried out primarily through deliberation. Deliberation informs and guides both individual and collective action. To shed light on the concept of deliberation, it is important to consider the rationality of choice, but what type of rationality is this? References to economic reason are at once widespread, crucial and controversial. This book therefore deals with arguments used by individuals based on the notions of preferential choice and rational behavior and also criticizes them. These arguments are examined in the context of the major themes of public debate that help to construct the contemporary public space: populism, social insurance, social responsibility and environmental issues. Economic Reason and Political Reason underlines the importance of the pragmatist shift of the 2000s and revisits through the lens of this new approach the great utilitarian and Rawlsian normative constructs that dominated normative political economics at the end of the 20th century. Alternative approaches based on the concept of deliberative democracy are proposed and discussed.

Capitalism as If the World Matters Jonathon Porritt, 2007 First Published in 2007 Routledge is an imprint of Taylor Francis, an information company.

Capitalism Jonathon Porritt, 2012-08-06 As our great economic machine grinds relentlessly forward into a

future of declining fossil fuel supplies climate change and ecosystem failure governments are at long last beginning to question the very structure of the global economy In this fresh politically charged analysis Jonathon Porritt wades in on the most pressing question of the 21st century can capitalism as the only real economic game in town be retooled to deliver a sustainable future Porritt argues that indeed it can and it must as he lays out the framework for a new sustainable capitalism that cuts across the political divide and promises a prosperous future of wealth equity and ecosystem integrity

Natural Capital Peter Kareiva, 2011-04-07 In 2005 The Millennium Ecosystem Assessment MA provided the first global assessment of the world's ecosystems and ecosystem services It concluded that recent trends in ecosystem change threatened human wellbeing due to declining ecosystem services This bleak prophecy has galvanized conservation organizations ecologists and economists to work toward rigorous valuations of ecosystem services at a spatial scale and with a resolution that can inform public policy The editors have assembled the world's leading scientists in the fields of conservation policy analysis and resource economics to provide the most intensive and best technical analyses of ecosystem services to date A key idea that guides the science is that the modelling and valuation approaches being developed should use data that are readily available around the world In addition the book documents a toolbox of ecosystem service mapping modeling and valuation models that both The Nature Conservancy and the World Wide Fund for Nature WWF are beginning to apply around the world as they transform conservation from a biodiversity only to a people and ecosystem services agenda The book addresses land freshwater and marine systems at a variety of spatial scales and includes discussion of how to treat both climate change and cultural values when examining tradeoffs among ecosystem services

A World to Live In G. M. Woodwell, 2016-02-26 A scientist makes a powerful case that preservation of the integrity of the biosphere is a necessity and an inviolable human right A century of industrial development is the briefest of moments in the half billion years of the earth's evolution And yet our current era has brought greater changes to the earth than any period in human history The biosphere the globe's life giving envelope of air and

climate has been changed irreparably In *A World to Live In* the distinguished ecologist George Woodwell shows that the biosphere is now a global human protectorate and that its integrity of structure and function are tied closely to the human future The earth is a living system Woodwell explains and its stability is threatened by human disruption Industry dumps its waste globally and makes a profit from it invading the global commons corporate interests overpower weak or nonexistent governmental protection to plunder the planet The fossil fuels industry offers the most dramatic example of environmental destruction disseminating the heat trapping gases that are now warming the earth and changing the climate forever The assumption that we can continue to use fossil fuels and adapt to climate disruption Woodwell argues is a ticket to catastrophe But Woodwell points the way toward a solution We must respect the full range of life on earth not species alone but their natural communities of plant and animal life that have built and still maintain the biosphere We must recognize that the earth's living systems are our heritage and that the preservation of the integrity of a finite biosphere is a necessity and an inviolable human right

Facing Catastrophe Robert R. M. Verchick, 2012-04-02 As Hurricane Katrina vividly revealed disaster policy in the United States is broken and needs reform What can we learn from past disasters storms floods earthquakes tsunamis landslides and wildfires about preparing for and responding to future catastrophes How can these lessons be applied in a future threatened by climate change In this bold contribution to environmental law Robert Verchick argues for a new perspective on disaster law that is based on the principles of environmental protection His prescription boils down to three simple commands Go Green Be Fair and Keep Safe Going green means minimizing exposure to hazards by preserving natural buffers and integrating those buffers into artificial systems like levees or seawalls Being fair means looking after public health safety and the environment without increasing personal and social vulnerabilities Keeping safe means a more cautionary approach when confronting disaster risks Verchick argues that government must assume a stronger regulatory role in managing natural infrastructure distributional fairness and public risk He proposes changes to the federal statutes governing environmental impact assessments wetlands development air emissions and flood control among others Making a strong case for more transparent governmental decision making Verchick offers a new vision of disaster law for the next generation

Common Ground Mark Everard, 2011-08-11 *Common Ground* explores the shifting relationship between human society and the landscapes that bear it Examining the changing understandings of the natural world and its management and exploitation environmental activist Mark Everard presents solutions in the nature of ecosystem services Notwithstanding our total dependence on the Earth's natural resources the relationship between humanity and the land has shifted significantly and frequently throughout our tenure brief as it is relative to the evolution of planetary life Appropriating increasing proportions of nature's resources to meet our shifting and growing demands we have been degrading the quality and extent of ecosystems nearly destroying their capacities to meet the needs of a burgeoning population The book offers a fresh and vital whole system approach to the key underpinning the issue of sustainability

Everard looks ahead to what is required to live sustainably respecting the central role of landscapes in supporting human wellbeing into the long term future **Spaceship Earth in the Environmental Age, 1960-1990** Sabine

Höhler, 2015-10-06 The idea of the earth as a vessel in space came of age in an era shaped by space travel and the Cold War. Höhler's study brings together technology, science, and ecology to explore the way this latter-day ark was invoked by politicians, environmentalists, cultural historians, writers of science fiction, and many others across three decades.
