Uncharted Constellations John C. Barentine,2016-04-04 This book compiles an array of interesting constellations that fell by the wayside before the IAU established the modern canon of constellations That decision left out lesser known ones whose history is nevertheless interesting but at last author John Barentine is giving them their due This book is a companion to The Lost Constellations highlighting the more obscure configurations The 16 constellations found in this volume fall into one or more of three broad categories asterisms such as the Big Dipper in Ursa Major single sourced constellations introduced on surviving charts by a cartographer perhaps currying the favor of sponsors and re brands new figures meant to displace existing constellations often for an ideological reason All of them reveal something unique about the development of humanity s map of the sky

P. Lewis,2013-05-31 In the early part of this century possible relationships between the various forces of nature began to attract the attention of physicists In 1800 William Herschel discovered that a heat spectrum is superimposed on and extends beyond the visible solar spectrum indicating some relationship between heat and light This seems to have suggested to Domenico Morichini of Rome the search for a relationship between light and magnetism In 1812 he claimed that he had been able to magnetize steel needles by exposing them to the violet radiation in the solar spectrum Others including Mrs Somerville in England believed that they had verified his results but many were unable to reproduce them and it was finally demonstrated that all these effects had been due to other causes The dispute over this question extended over many years and is an instructive illustration of the difficulty which even skilled experimenters may have in solving a comparatively simple experimental problem About 1825 Sir John Herschel sent a polarized beam of light along the axis of a helix carrying an electric current Examination with an analyzer showed no effect He also intended to test the effect of a polarized beam passing tangentially by a conductor carrying a current but never executed the experiment No other attempt to show a relationship between light and magnetism seems to have been made until Faraday undertook the investigation described in the following pages
