Britain's transition to a diet rich in animal proteins and refined carbohydrates like wheat and sugar a diet that required more  
acreage than that of Britain itself and that if followed everywhere would soon deplete the planet's resources as the title  
announces this was truly a diet for a large planet From the late 1700s to the end of World War II Otter accounts for the  
structures practices and ideologies generated by Britain's nutrition transition He shows how Britain was the first nation to  
undergo the population explosion urbanization and industrialization we associate with modernity and how it managed the  
unprecedented problem of how to feed its growing population Its radical solution would be to outsource its food production  
leading away from a locally produced plant based diet to one reliant on global markets international trade networks and  
enormous agro food systems that would have planetary effects on famine war the world economy and the wider earth system  
Not only did this phase in Britain's history make the consumption of meat white bread sugar and butter a coveted diet linked  
to development luxury and power it also opened up a new phase in economic history one whose dramatic effects endure to  
this day whether in terms of health problems eating disorders or the seemingly endless world food crisis **American**
