New Directions In Language Development And Disorders:

  New Directions In Language Development And Disorders Michael Perkins,Sara Howard,2012-12-06 Research into child language development is being conducted more extensively by more people and in more countries throughout the world than at any point in the past We now know more than we ever did before about the linguistic cognitive neurobio logical and social capacities that children bring to their language learning task as well as the ways in which these capacities interact with a whole range of factors present in the child s environment throughout the learning process not least the particular character istics of the language or languages to which the child is exposed Far from inducing a sense of complacency this new knowledge seems instead to create an even stronger impetus to know more This is partly because of the new and unforeseen questions it raises and partly because of competition between different theories to provide the best explanation of the phenomenon and which in turn engender different methods of enquiry This volume addresses many of the key issues which are currently exercising the minds of child language researchers and which are likely to motivate research for some years to come The chapters included here all previously unpublished present a great deal of new data and address a range of theoretical issues from a variety of perspectives   Language Development Brian Shulman,Nina Capone,2010-11-15 Health Sciences Professions   *Children with Specific Language Impairment, second edition* Laurence B. Leonard,2017-10-13 The landmark reference in the field completely updated a comprehensive treatment of a disorder that is more prevalent than autism Children with specific language impairment SLI show a significant deficit in spoken language that cannot be attributed to neurological damage hearing impairment or intellectual disability More prevalent than autism and at least as prevalent as dyslexia SLI affects approximately seven percent of all children it is longstanding with adverse effects on academic social and eventually economic standing The first edition of this work established Children with Specific Language Impairment as the landmark reference on this condition considering not only the disorder s history possible origins and treatment but also what SLI might tell us about language organization and development in general This second edition offers a complete update of the earlier volume Much of the second edition is completely new reflecting findings and interpretations based on the hundreds of studies that have appeared since the publication of the first edition in 1997 Topics include linguistic details descriptive and theoretical word and sentence processing findings genetics neurobiology treatment and comparisons to such conditions as autism spectrum disorders ADHD and dyslexia The book covers SLI in children who speak a wide range of languages and although the emphasis is on children it also includes studies of adults who were diagnosed with SLI as children or are the parents of children with SLI Written by a leading scholar in the field Children with Specific Language Impairment offers the most comprehensive balanced and unified treatment of SLI available   *Linguistic Disorders and Pathologies* Gerhard Blanken,Jürgen Dittmann,Hannelore Grimm,John C. Is the Language Faculty Non Linguistic? Umberto Ansaldo, N. J. Enfield,2016-08-15 A line of research in cognitive science over several decades has been dedicated to finding an innate language specific cognitive system a faculty which allows human infants to acquire languages natively without formal instruction and within short periods of time In recent years this search has attracted significant controversy in cognitive science generally and in the language sciences specifically Some maintain that the search has had meaningful results though there are different views as to what the findings are ranging from the view that there is a rich and rather specific set of principles to the idea that the contents of the language faculty are while specifiable in fact extremely minimal But other researchers rigorously oppose the continuation of this search arguing that decades of effort have turned up nothing The fact remains that the proposal of a language specific faculty was made for a good reason namely as an attempt to solve the vexing puzzle of language in our species Much work has been developing to address this and specifically to look for ways to characterize the language faculty as an emergent phenomenon i e not as a dedicated language specific system but as the emergent outcome of a set of uniquely human but not specifically linguistic factors in combination A number of theoretical and empirical approaches are being developed in order to account for the great puzzles of language language processing language usage language acquisition the nature of grammar and language change and diversification This research topic aims at reviewing and exploring these recent developments and establishing bridges between these young frameworks as well as with the traditions that have come before The goal of this Research Topic is to focus on current developments in what many regard as a paradigm shift in the language sciences In this Research Topic we want to ask If current explicit proposals for an innate dedicated faculty for language are not supported by data or arguments how can we solve the problems that UG was proposed to solve Is it possible to solve the puzzles of language in our species with an appeal to causes that are not specifically linguistic   **Joint Attention: Communication and Other Minds** Naomi Eilan,Department of Philosophy Naomi Eilan,Christoph Hoerl,Teresa
