## **New Earths Restructuring Earth And Other Planets:**

**New Earths** James E. Oberg,1983      **New Earths** James E. Oberg,1981 This exciting new volume presents every ship in which Admiral Horatio Nelson served in full detail for the first time Includes a comprehensive background of each vessel and the incidents that occurred when Nelson was aboard each ship 45 photos 40 line drawings      **Geoengineering and Climate Change** Martin Beech,2025-01-07 This important and timely book assembles expert scientists from both sides of the debate to discuss Earth based and space based climate intervention technologies including the scale deployment risk management and moral philosophy behind these technologies The role that geoengineering might play within the context of global warming amelioration has long been contentious For all this geoengineering is about getting down and dirty with respect to the issue of climate intervention Often dismissed as an option of last resort geoengineering is now emerging as a key component in humanity s drive to bring the impacts of global warming under some form of mitigation and control While geoengineering does not solve the fundamental problem of continued anthropomorphic carbon dioxide emissions the root cause of global warming it is an option that can effectively buy humanity some much needed time Time that is to act positively and time to introduce meaningful emission reductions and deploy large scale sequestration technologies Indeed the failure to meaningfully corral greenhouse gas emission levels and the slow development of large scale carbon capture technologies will by the close of the 21st century likely see global temperatures increase by at least 2 or 3 degrees above pre industrial levels What geoengineering can potentially do for us is to offset the more extreme climate change scenarios that are presently projected to come about An integrated geoengineering program to cool Earth s atmosphere running in parallel with the development of sequestration technologies and substantial emission reductions can work to limit the worst effects of climate change that will without geoengineering surely come about Geoengineering is not a neutral or benign action however and if it is to be deployed then much more research and field testing of ideas and technologies is urgently needed The authors in this book present a cross section of philosophies engineering approaches and reactions to the idea of geoengineering Through their words the reader is introduced to the historical and contemporary debate concerning the potential deployment of geoengineering actions Indeed there are many ways in which geoengineering as a grand worldwide initiative or as a combined set of independent actions might proceed in both the near and the deep future and here the reader is introduced to these topics by experts in their field Audience This book will be of interest to engineers chemists geologists physicists biologists environmentalists meteorologists philosophers mathematicians computer modelers and policy managers General readers interested in geoengineering will find the book very readable and scientifically reliable

**Critical Perspectives on the Viability of Human Life on Other Planets** Nicki Peter Petrikowski,2016-07-15 Recent technological developments have opened up the possibility of colonizing other planets Some experts argue that space colonization will be essential for the survival of the human species Students will analyze and evaluate experts opinions on

space colonization in order to reach their own conclusions and expand their horizons

**Terraforming Mars** Martin Beech, Joseph Seckbach, Richard Gordon, 2021-12-09 TERRAFORMING MARS This book provides a thorough scientific review of how Mars might eventually be colonized industrialized and transformed into a world better suited to human habitation The idea of terraforming Mars has in recent times become a topic of intense scientific interest and great public debate Stimulated in part by the contemporary imperative to begin geoengineering Earth as a means to combat global climate change the terraforming of Mars will work to make its presently hostile environment more suitable to life especially human life Geoengineering and terraforming at their core have the same goal that is to enhance or revive the ability of a specific environment to support human life society and industry The chapters in this text written by experts in their respective fields are accordingly in resonance with the important and ongoing discussions concerning the human stewardship of global climate systems In this sense the text is both timely and relevant and will cover issues relating to topics that will only grow in their relevance in future decades The notion of terraforming Mars is not a new one as such and it has long played as the background narrative in many science fiction novels This book however deals exclusively with what is physically possible and what might conceivably be put into actual practice within the next several human generations Audience Researchers in planetary science astronomy astrobiology space engineering architecture ethics as well as members of the space industry

**Mapping Mars** Oliver Morton, 2002-10-04 Who are the extraordinary individuals that will take us on the next great space race the next great human endeavor our exploration and colonization of the planet Mars And more importantly how are they doing it Acclaimed science writer Oliver Morton explores the peculiar and fascinating world of the new generation of explorers geologists scientists astrophysicists and dreamers Morton shows us the complex and beguiling role that mapping will play in our understanding of the red planet and more deeply what it means for humans to envision such heroic landscapes Charting a path from the 19th century visionaries to the spy satellite pioneers to the science fiction writers and the arctic explorers till now to the people are taking us there Morton unveils the central place that Mars has occupied in the human imagination and what it will mean to realize these dreams A pioneering work of journalism and drama Mapping Mars gives us our first exciting glimpses of the world to come and the curious bizarre and amazing people who will take us there
