Fulkerson, Alexander R. Thomas, 2020-11-15 Urban Dependency investigates the risks of urban populations that cannot survive without the massive consumption of basic rural products like food textiles fossil fuels and other energy rich goods that are harvested by a shrinking rural base Thomas and Fulkerson argue that though essential rural workers and communities are poorly compensated for their labor that is both dangerous and highly exploitative While the rural population is already shrinking the authors predict that harsh political economic conditions will only fuel further rural urban migration worsening the problem of urban dependency The authors apply their theory of the energy economy to explore a balance between the supply and demand of energy resources that promotes rural justice *Leadership and Personnel Management:*

Whistleblowing Wojciech W. Gasparski, 2017-09-08 This latest volume in this important international series discusses practical errors and wrongdoing considered under the action theory praxiological umbrella linking these to ethical behavior Human actions related to the conduct of business should be effective and efficient But such praxiological criteria are of secondary importance to norms that should also be taken into account The primary norm is ethical behavior which defines the morality of business activities on the basis of the good these are the presupposed foundations for the human actions in business The articles in this volume discuss whistleblowing or the exposure of behavior that violates the ethical foundations of business They are written from different angles and present a variety of experiences adding new value to both the subject of praxiology as well as ethics as it relates to economic activity in its social and global context The issues problems and questions raised by this international group of eminent scholars have much to add to the contemporary debate induced by the present economic crises These crises have revealed practical errors and hypocrisy of those responsible for leadership and management primarily of financial institutions

Towards Globo Sapiens Patricia Kelly, 2008-01-01 Global and local studies show that the present growth based approach to development is unsustainable If we are serious about surviving the 21st century we will need graduates who are not simply globally portable or even globally competent but also wise global citizens Globo sapiens This book contributes to what educators need to know do and be in order to support transformative learning The book is based on work with large socially and culturally diverse first year engineering students at an Australian university of technology It shows that reflective journals with appropriate planning and support can be one pillar of a transformative pedagogy which can encourage significant and even transformative attitude change in relation to gender culture and the environment It also offers evidence of improved communication skills and other tangible changes to counter common criticisms that such work is airy fairy and irrelevant The author combines communication theory with critical futures thinking to provide layered understandings of how transformative learning affected students thinking learning and behaviour So the book is both a case study and a detailed response to the personal

and professional challenges that educators all over the world will face as they try to guide students in sustainable directions

Sustainability of Water Resources Goen Ho, Kuruvilla Mathew, 2004-12-01 Water is essential for all life forms It is a fundamental resource necessary for socio economic development and for ecological sustainability Good quality water is becoming scarce due to population growth and associated industrial development and pollution particularly in towns and cities It is timely that the sustainability and management of water resources is widely discussed noting that water can be used an unlimited number of times with proper treatment The papers in *Sustainability of Water Resources* were originally presented at a meeting at Murdoch University on 13 14 November 2002 where new and innovative methods of treatment better understanding and assessment of resources and their supporting ecosystems and proper management for conservation were explored The meeting was preceded by a two day workshop on Water for Cities and participants from the workshop from the Asia Pacific and Indian Ocean regions contributed to lively discussion at the conference Engineering and Society Stephen Johnston, J. Joseph King, 2000 Recognizing the central role of engineering activity in modern societies Engineering the nature of development and its relationship to engineering and the role that professional engineering practice plays in the development of technology and the sustainable creation wealth The history of engineering and engineering design The social and political contexts in which engineers practice How engineers create new products processes and systems Engineering leadership and management Economic development and the globalization of engineering practice The challenges of reconciling development with ecological consequences Ethics and future challenges in professional engi

Journal of Engineering Education ,1999 *Steps toward a Philosophy of Engineering* Carl Mitcham, 2019-12-06 The rise of classic Euro American philosophy of technology in the 1950s originally emphasized the importance of technologies as material entities and their mediating influence within human experience Recent decades however have witnessed a subtle shift toward reflection on the activity from which these distinctly modern artifacts emerge and through which they are engaged and managed that is on engineering What is engineering What is the meaning of engineering How is engineering related to other aspects of human existence Such basic questions readily engage all major branches of philosophy ontology epistemology ethics political philosophy and aesthetics although not always to the same degree The historico philosophical and critical reflections collected here record a series of halting steps to think through engineering and the engineered way of life that we all increasingly live in what has been called the Anthropocene The aim is not to promote an ideology for engineering but to stimulate deeper reflection among engineers and non engineers alike about some basic challenges of our engineered and engineering lifeworld **Engineering the Future** Brian Edmund Lloyd, Clive Ferguson, 2001 The authors of this book consider the future of the profession of engineering Issues discussed include engineering education competencies and professional skills attributes and the future roles of engineers following the directives of economic rationalism or contributing to a renewal of civil society by taking responsibility for the social and human as well as the technical and

economic consequences of their work **Engineering the Climate** Christopher J. Preston, 2012-06-28 Engineering the Climate The Ethics of Solar Radiation Management discusses the ethical issues associated with deliberately engineering a cooler climate to combat global warming Climate engineering also known as geoengineering has recently experienced a surge of interest given the growing likelihood that the global community will fail to limit the temperature increases associated with greenhouse gases to safe levels Deliberate manipulation of solar radiation to combat climate change is an exciting and hopeful technical prospect promising great benefits to those who are in line to suffer most through climate change At the same time the prospect of geoengineering creates huge controversy Taking intentional control of earth's climate would be an unprecedented step in environmental management raising a number of difficult ethical questions One particular form of geoengineering solar radiation management SRM is known to be relatively cheap and capable of bringing down global temperatures very rapidly However the complexity of the climate system creates considerable uncertainty about the precise nature of SRM's effects in different regions The ethical issues raised by the prospect of SRM are both complex and thorny They include 1 the uncertainty of SRM's effects on precipitation patterns 2 the challenge of proper global participation in decision making 3 the legitimacy of intentionally manipulating the global climate system in the first place 4 the potential to sidestep the issue of dealing with greenhouse gas emissions and 5 the lasting effects on future generations It has been widely acknowledged that a sustained and scholarly treatment of the ethics of SRM is necessary before it will be possible to make fair and just decisions about whether or how to proceed This book including essays by 13 experts in the field of ethics of geoengineering is intended to go some distance towards providing that treatment *Choice*, 1999
