engine. If we should place the axle behind the boiler, then the supporting beam would have to be attached to the end plates instead of the side, and there would

be the same objection that the boiler would be injured by the strain. We could trouble by placing the axle directly on the boiler; the axle carrying the side weight, without damaging the plate boiler. The plow or any other load can be hitched at center or any point on either side. In road building, a grader can be attached so it will work outside the path of the engine, and both engine and grader run straight.

**FRICITION GUIDE**—Everyone is familiar with the old style hand steering wheel, which makes such hard work for the engineer in guiding the larger traction outfit on rough roads. On page 11 we illustrate a device we have designed to do away with this difficult task, and by means of which the engine furnishes power to guide itself. This attachment can be furnished with any Baker steam friction engine. The shaft on which steering worm gear is placed is upright and supported by a bracket in front of main shaft, as shown on page 13.
