Politics Of Genetic Resource Control:

The Politics of Genetic Resource Control A. Stenson, T. Gray, 1999-06-23 The question of how genetic resources ought to be owned and controlled has become a controversial international political issue The authors examine this issue from a normative perspective discussing the four principles that govern the debate over genetic resource control These four principles are proprietary intellectual property rights the dominant principle reflecting Western influences communitarian intellectual property rights a principle bound up with the rights of indigenous peoples national sovereignty the principle at the heart of international law and common heritage of mankind the most recent principle reflecting Third World demands

A Normative Analysis of the Politics of Genetic Resource Control Anthony Stenson, University of Newcastle upon Tyne. Department of Politics, 1998 *Accessing and Sharing the Benefits of the Genomics Revolution* Peter W.B. Phillips, Chika B. Onwuekwe, 2007-05-09 There is a veritable gold rush mentality in the life science world as scientists entrepreneurs and multinationals are staking claims to the code of life embodied in the world's current stock of plants animals microbes and human populations This edited volume explores the legal economic and political context for the debate about intellectual property rights for traditional knowledge and genetic resources and critically analyses the theory and practice of access and benefits sharing efforts around the world The book also investigates the current flashpoints the David and Goliath battle between Monsanto and Percy Schmeiser over farmers rights the dispute over coexistence of GM and organic production and the ownership and control of human genetic materials stored in human gene banks around the world

Narratives of Hunger in International Law Anne Saab, 2019-04-04 This book explores the role that the language of international law plays in constructing understandings or narratives of hunger in the context of climate change The story is told through a specific case study of genetically engineered seeds purportedly made to be climate ready Two narratives of hunger run through the storyline the prevailing neoliberal narrative that focuses on increasing food production and relying on technological innovations and private sector engagement and the oppositional and aspirational food sovereignty narrative that focuses on improving access to and distribution of food and rejects technological innovations and private sector engagement as the best solutions This book argues that the way in which voices in the neoliberal narrative use international law reinforces fundamental assumptions about hunger and climate change and the way in which voices in the food sovereignty narrative use international law fails to question and challenge these assumptions *The Oxford Handbook of Comparative Environmental Law* Emma Lees, Jorge E. Viñuales, 2019-05-06 This Handbook is the first comprehensive account of comparative environmental law It examines in detail the methodological foundations of the discipline as well as the substance of environmental law across countries from four vantage points country studies from all continents responses to common problems including air pollution water management nature conservation genetically modified organisms climate change and energy chemicals waste foundational components of environmental law systems including principles property

rights administrative and judicial organisation command and control regulation market mechanisms informational techniques and liability mechanisms and common interactions of environmental protection with the broader public private and criminal law contexts The volume brings together the foremost authorities in this field from around the world to provide a concise self contained and technically rigorous account of environmental law as a single overall system Global Justice and the Politics of Information Sky Croeser,2014-09-19 The global social justice movement attempts to build a more equitable democratic and environmentally sustainable world However this book argues that actors involved need to recognise knowledge including scientific and technological systems to a greater extent than they presently do The rise of the Occupy movement the Arab Spring and the Wikileaks controversy has demonstrated that the internet can play an important role in helping people to organise against unjust systems While governments may be able to control individual activists they can no longer control the flow of information However the existence of new information and communications technologies does not in itself guarantee that peoples movements will win out against authoritarian governments or the power of economic elites Drawing on extensive interviews and fieldwork this book illustrates the importance of contributions from local movements around the world to the struggle for global justice Including detailed case studies on opposition to genetically modified crops in the south of India and the digital liberties movement this book is vital reading for anyone trying to understand the changing relationship between science technology and progressive movements around the world This book will be of interest to students and scholars of International Politics Social movements Global Justice and Internet politics *Intellectual Property Rights and Food Security* Michael Blakeney,2009-01-01 Intellectual Property Rights IPRs play an important role in the struggle for food security and encouraging agricultural research and development This book examines these roles as well as the international relationship between IPRs agricultural biotechnology access to biological resources food security and globalisation paying particular attention to proposals for the protection of Farmers Rights traditional knowledge GM crops and the impact of competition laws It proposes a number of recommendations for action in deploying IPRs in order to reach greater food security globally **Global Biopiracy** Ikechi Mgbеoji,2011-11-01 Legal control and ownership of plants and traditional knowledge of the uses of plants TKUP is a vexing issue The phenomenon of appropriation of plants and TKUP otherwise known as biopiracy thrives in a cultural milieu where non Western forms of knowledge are systemically marginalized and devalued as folk knowledge or characterized as inferior Global Biopiracy rethinks the role of international law and legal concepts the Western based Eurocentric patent systems of the world and international agricultural research institutions as they affect legal ownership and control of plants and TKUP The analysis is cast in various contexts and examined at multiple levels The first deals with the Eurocentric character of the patent system international law and institutions The second involves the cultural and economic dichotomy between the industrialized Western world and the westernizing developing world The third level of analysis considers the phenomenal loss of human cultures and plant

diversity Exhaustively researched and eloquently argued Global Biopiracy sheds new light on a contentious topic The impact of intellectual property law on indigenous peoples and informal or traditional innovations is a field of study that currently includes only a handful of scholars Biopiracy will be an invaluable resource for students teachers and legal practitioners

Reconciling Environment and Trade Edith Brown Weiss, John Howard Jackson, Nathalie Bernasconi-Osterwalder, 2008 The volume focuses on five cases all of which remain cornerstone trade environment cases of the WTO The subject matter of these cases reflects five basic issues in the clash between trade and the environment public health air pollution ozone depletion food safety destruction of endangered species and biosafety These five issues surface dramatically in international disputes over tobacco reformulated gasoline beef growth hormones commercial fishing methods and genetically modified organisms In the second edition of this book Nathalie Bernasconi Osterwalder joins the original editors to update and contextualize the five case studies in new introductions to each section These introductions provide an overview of developments since the first edition including subsequent related cases The second edition also includes updated bibliographic materials In their penetrating analyses of these cases and their vast implications the authors take into account the entire disciplines of both trade law and environmental law noting especially the points of friction between the multilateral instruments in each field and the developing jurisprudence of the WTO Dispute Settlement with regard to the exceptions specified in Article XX of the GATT The articulated standpoints of all parties governments and NGOs on both sides of the controversy are probed for agendas whether stated or unstated No one involved in international trade or environmental activism can afford to ignore this vital publication The information it provides on WTO jurisprudence on current and pending environmental initiatives on the science behind the disputes no less than the fresh and convincing analysis it holds forth make it an essential tool for understanding some of the most crucial issues in international law today *The President and American Capitalism since 1945* Mark H. Rose, Roger Biles, 2017-11-14 The book examines the development of the U S presidency since 1945 and describes the many ways some of which are unknown or greatly underappreciated in which the president's actions affect the daily lives of the American people **Intellectual Property and Traditional Knowledge in the Global Economy** Teshager W. Dagne, 2014-09-04 Arising from recent developments at the international level many developing countries indigenous peoples and local communities are considering using geographical indications GIs to protect traditional knowledge and to promote trade and overall economic development Despite the considerable enthusiasm over GIs in diverse quarters there is an appreciable lack of research on how far and in what context GIs can be used as a protection model for traditional knowledge based resources This book critically examines the potential uses of geographical indications as models for protecting traditional knowledge based products and resources in national and international intellectual property legal frameworks By analysing the reception towards GIs from developing countries and advocates of development in the various legal and non legal regimes including the World Trade Organization World Intellectual Property Organization

and the Convention on Biological Diversity and the Food and Agricultural Organization the book evaluates the development potential of GIs in relation to ensuing changes in international intellectual property law in accommodating traditional knowledge Teshager W Dagne argues for a degree of balance in the approach to the implementation of global intellectual property rights in a manner that gives developing countries an opportunity to protect traditional knowledge based products The book will be of great interest and use to scholars and students of intellectual property law public international law traditional knowledge and global governance *Scientists, Plants and Politics* Robin Pistorius,1997 How plant genetic resources conservation became a global issue Breeding strategies and conservation strategies Establishing a global conservation network Techniques in Molecular Systematics and Evolution Rob DeSalle,Gonzalo Giribet,Ward Wheeler,2013-12-01 The amount of information that can be obtained by using molecular techniques in evolution systematics and ecology has increased exponentially over the last ten years The need for more rapid and efficient methods of data acquisition and analysis is growing accordingly This manual presents some of the most important techniques for data acquisition developed over the last years The choice and justification of data analysis techniques is also an important and critical aspect of modern phylogenetic and evolutionary analysis and so a considerable part of this volume addresses this important subject The book is mainly written for students and researchers from evolutionary biology in search for methods to acquire data but also from molecular biology who might be looking for information on how data are analyzed in an evolutionary context To aid the user information on web located sites is included wherever possible Approaches that will push the amount of information which systematics will gather in the Water Politics in the Middle East M. Dolatyar,T. Gray,1999-09-21 Most studies of water scarcity in the Middle East conclude that there is a significant risk of imminent conflict even warfare between states in the region This book demonstrates that the evidence does not support this doom laden prediction Indeed the authors show that although water scarcity has occasionally played a role in disputes in the Middle East it has much more often promoted co existence between adversaries The reasoning behind this hypothesis is that water is too critical to be put at risk by warfare **Philosophy and Biodiversity** Markku Oksanen,Juhani Pietarinen,2004-09-06 This important collection focuses on the nature and importance of biodiversity The concept is clarified and its intrinsic and instrumental value are discussed Even though the term biodiversity was invented in the 1980s to promote the cause of species conservation discussions on biological diversity go back to Plato There are many controversies surrounding biodiversity and a few of them are examined here What is worthy of protection or restoration and what is the acceptable level of costs Is it permissible to kill sentient animals to promote native populations Can species be reintroduced if they have disappeared a long time ago How should the responsibilities for biodiversity be shared This book will be of interest to philosophers of science and biologists but also to anyone interested in conservation and the environment

Biotechnology and the Challenge of Property Remigius N. Nwabueze,2007-01-01 In addressing the impact of modern

biotechnology and its legal accommodation on the customary conduct and traditional beliefs which shape the lives of different communities Nwabueze's work provides an introduction to the legal regulation of the evolving Global Environmental Politics Jean-Frédéric Morin, Amandine Orsini, Sikina Jinnah, 2020 Global Environmental Politics provides a fully up to date and comprehensive introduction to the most important issues dominating this fast moving field Going beyond the issue of climate change the textbook also introduces students to the pressing issues of desertification trade in hazardous waste biodiversity protection whaling acid rain ozone depletion water consumption and over fishing Importantly the authors pay particular attention to the interactions between environmental politics and other governance issues such as gender trade development health agriculture and security The International Politics of Biotechnology Alan M. Russell, John Vogler, 2000 There are three sections The first considers the nature of the science itself the normative questions raised and the significance of gender responses Following these broad issues the second section addresses biotechnology in relation to international political economy trade and the environment highlighting the politics of food and patents The final section tackles the question of biological knowledge applied to weapons and the global responses **Intellectual Property Rights Trade and Biodiversity** Graham Dutfield, 2000-03-01 This text examines the international agreements governing trade in genetic resources crucial resources for world agriculture food security and large industries such as pharmaceuticals Intellectual Property Rights IPRs in these resources are critical for those involved in the trade including industry and developing countries The book analyzes the Convention on Biological Diversity CBD World Trade Organization agreements and other agreements It explains how they can be integrated into an equitable trading regime **Intellectual Property Rights And The Life Science Industries: Past, Present And Future (2nd Edition)** Graham Dutfield, 2009-05-05 This book is a highly readable and entertaining account of the co evolution of the patent system and the life science industries since the mid 19th century The pharmaceutical industries have their origins in advances in synthetic chemistry and in natural products research Both approaches to drug discovery and business have shaped patent law as have the lobbying activities of the firms involved and their supporters in the legal profession In turn patent law has impacted on the life science industries Compared to the first edition which told this story for the first time the present edition focuses more on specific businesses products and technologies including Bayer Pfizer GlaxoSmithKline aspirin penicillin monoclonal antibodies and polymerase chain reaction Another difference is that this second edition also looks into the future addressing new areas such as systems biology stem cell research and synthetic biology which promises to enable scientists to invent life forms from scratch
