Precambrian Crustal Evolution of China Jin Bai, 1998-08-20 Precambrian Crustal Evolution of China integrates the theory of plate tectonics structural geology and petrology to identify the tectonic and metamorphic environment in different stages of development of the Archaean and Proterozoic crust Further the evolution of the Precambrian atmosphere and hydrosphere is approached by using geochemical data and traces of life For the first time the results of the study of the Precambrian geology of China are made available in English to scientists and students not having access to the huge amount of Chinese literature

Precambrian Crustal Evolution of the Yangtze Block, South China Lijuan Wang, 2011 **Evolution of Archean Crust and Early Life** Yildirim Dilek, Harald Furnes, 2013-11-26 This book presents an integrated approach to the study of the evolution of the Archean lithosphere biosphere and atmosphere and as such it is a unique contribution to our understanding of the early Earth and life The structural and geochemical make up of both the oceanic and continental crust of the Archean Earth is documented in some case studies of various cratons and the implications of the Phanerozoic plate and plume tectonic

processes for the Archean geology are discussed in several chapters in the book All chapters are process oriented and data rich and reflect the most recent knowledge and information on the Archean Earth The interdisciplinary approach of examining the evolution of the Archean crust oceans and life that we adopt in this book sets it apart from previous publications on Precambrian geology The book will be attractive to researchers in academia and in industry and to senior undergraduate students graduate students and faculty in earth and natural sciences *Granulites and Crustal Evolution* D. Main Tectonic Events and Metallogeny of the North China Craton Mingguo Zhai, Yue Zhao, Taiping Zhao, 2016-07-25 This book focuses on the metallogeny and main tectonic events of the North China Craton from early Precambrian to Phanerozoic It covers the Archean crustal growth Paleoproterozoic rifting subduction collision processes Great Oxidation Event Meso Neoproterozoic multiple rifting Phanerozoic reworking of the North China Craton as well as metallogeny related to above different processes The North China Craton is one of the oldest cratons in the world It has experienced a complex geological evolution since the early Precambrian and carries important records of secular changes in tectonics and metallogeny It provides a systematic review and new results on the growth and evolution of the North China Craton and metallogeny It will be of broad interest to the earth scientists working in the fields of economic geology geochemistry and tectonics of the North China Craton and eastern Asian *Archean Crustal Evolution* K.C. Condie, 1994-11-11 The integration of Tectonics Geochemistry up to date reviews by leading scientists as well as a broad topical coverage of the Archean are some of the features of this particular volume As geochronology has progressed in the last 20 years the Archean has continued to attract interest Advancements in the understanding of Archean crustal and mantle evolution have progressed rapidly since the first International Archean Symposium in Western Australia 1970 The landmark for the Archean was the NATO Advanced Study Institute at Leicester 1975 At this meeting the Archean truly came of age Investigators from many different disciplines focused their expertise on the early history of the earth For the first time the nature of the atmosphere oceans and life during the Archean was an important part of an Archean symposium During the most recent Archean Symposium in Perth in 1990 there was a shift in interest from field and trace element data to the new rapidly evolving high precision U Pb geochronology of Archean rocks and to detailed structural studies of both low and high grade Archean terrains The terrane concept so widely applied to the Phanerozoic was proposed for the Archean Yilgarn Province in Western Australia and is now widely accepted for the Archean as evident by the articles in this book Plate tectonics is now widely accepted as the principal process that controls the history of continents and oceans There are though well substantiated differences between Archean and post Archean rocks that indicate that Archean tectonic regimes must have differed in some respects from modern ones The question of how and to what degree did Archean plate tectonics differ from modern plate tectonics is treated in many of the chapters of this book

Altogether the editor has presented a selection of articles that provide a fascinating insight into the latest observations in this field

Earth's Oldest Rocks Martin J. Van Kranendonk, Vickie Bennett, Elis Hoffmann, 2018-09-26

Earth's Oldest Rocks Second Edition is the only single reference source for geological research of early Earth. This new edition is an up to date collection of scientific articles on all aspects of the early history of the Earth from planetary accretion at 4.567 billion years ago Ga to the onset of modern style plate tectonics at 3.2 Ga. Since the first edition was published significant new advances have been made in our understanding of events and processes on early Earth that correspond with new advances in technology. The book includes contributions from over 100 authors all of whom are experts in their respective fields. The research in this reference concentrates on what is directly gleaned from the existing rock record to understand how our planet formed and evolved during the planetary accretion phase, formation of the first crust, the changing dynamics of the mantle and style of tectonics, life's foothold and early development and mineral deposits. It is an ideal resource for academics, students and the general public alike. Advances in early Earth research since 2007 based primarily on evidence gleaned directly from the rock record. More than 50% of the chapters in this edition are new and the rest of the chapters are revised from the first edition with more than 700 pages of new material. Comprehensive reviews of areas of ancient lithosphere from all over the world and of crust forming processes. New chapters on early solar system materials, composition of the ancient atmosphere, hydrosphere and overviews of the oldest evidence of life on Earth and modeling of early Earth tectonics.

Palaeoproterozoic Supercontinents and Global Evolution Steven Michael Reddy, 2009

The Palaeoproterozoic era 2500-1600 Ma is a critical period of Earth history with dynamic evolution from the deep planetary interior to its surface environment. Several lines of geological evidence suggest the existence of at least one pre-Rodinia supercontinent named Nuna or Columbia which formed near the end of Palaeoproterozoic time. Prior to this assembly there may have been an older supercontinent Kenorland or perhaps only independently drifting supercratons. The tectonic records of amalgamation and dispersal of these ancient landmasses provide a framework that links processes of the deep Earth with those of its fluid envelope. The sixteen papers in this volume present reviews and new analytical data that span the geological record of Palaeoproterozoic Earth. The volume is useful as a reference book for students and professional geoscientists interested in this important period of global evolution.
