The Impact of Long-Term Monitoring on Variable Star Research C. Sterken,Mart de Groot,2012-12-06 Long term monitoring is of fundamental significance in solving many important problems in astrophysics and furthermore has unequalled value in extending observational runs with small telescopes for the education of young astronomers in order to teach them how to secure high quality observational data over many years The Impact of Long Term Monitoring on Variable Star Research contains reports based on the analysis of data collected in the visible IR and radio measurement ranges as well as the design and history of well known photometric systems Though the reporting of novel results forms an important part of the book there are also reports of eight discussion sessions covering more general areas such as extinction monitoring the problems of archival storage of astronomical data service observation the role played by long term monitoring in graduate teaching and thesis supervision the interplay between the great observational effort and theory the contribution of LTM to new knowledge of fundamental data and the increasing decommissioning of telescopes of modest aperture

Physics Briefs ,1993 *From Luminous Hot Stars to Starburst Galaxies* Peter S. Conti,Paul A. Crowther,Claus Leitherer,2008-10-23 Luminous hot stars represent the extreme upper mass end of normal stellar evolution Before exploding as supernovae they live out their lives of a few million years with prodigious outputs of radiation and stellar winds dramatically affecting both their evolution and environments A detailed introduction to the topic this book connects the astrophysics of massive stars with the extremes of galaxy evolution represented by starburst phenomena A thorough discussion of the physical and wind parameters of massive stars is presented HII galaxies their connection to starburst galaxies and the contribution of starburst phenomena to galaxy evolution through superwinds are explored The book concludes with the wider cosmological implications including Population III stars Lyman break galaxies and gamma ray bursts for each of which massive stars are believed to play a crucial role This book is ideal for graduate students and researchers in astrophysics interested in luminous hot stars and galaxy evolution

How does the Galaxy work? Emilio Javier Alfaro,Enrique Perez,José Franco,2006-03-30

The international conference How does the Galaxy work Agalactic tertulia rd th with Don Cox and Ron Reynolds was held during the week of 23 to 27 of June 2003 in the marvelous city of Granada Spain This week marked the beginning of one of the hottest summers that we have ever lived but in contrast the meeting was one of the coolest events that we can remember First it certainly was a first class scientific reunion with an excellent program talented speakers and alive discussions in a friendly atmosphere Second the whole event was embedded in the passionate Andalucian way of life a true tertulia well seasoned with tasty tapas and perfectly marinated in cool and dry sherry wine Third the celebration was framed by some of the most beautiful settings that one can imagine we enjoyed the magnificence and splendor of the Alhambra the unique Muslim Jewish Christian flavor of the Albaicin and the magical gipsy heartbeat of Sacromonte Last but not least all discussions whether they were during the sessions or at the table were sprinkled with the charm and wit of the two guests of honor

Don Cox and Ron Reynolds The idea of having a scientific feast to celebrate their 60th birthday in Granada was actually conceived at a bar table in Seville with plenty of manzanilla at hand a couple of summers ago That perhaps was the difficult part of the project The rest was relatively easy to achieve because Don and Ron are not only remarkable astronomers but they are also great human beings Indeed we had a very positive response from all parties involved every person we talked to was enthusiastic about the celebration and wanted to give their own point of view in this tertulia

Census of the Galaxy:

Challenges for Photometry and Spectrometry with GAIA Vladas Vansevicius, Arunas Kucinskas, Jokubas Sudzius, 2012-12-06 Astrometry from space was performed for the first time and with great success by the ESA Hipparcos satellite 1989-93 This mission was designed as an astrometry mission but the use of a photon counting detector made it possible to produce very important photometric results the most accurate astronomical photometry ever by the main Hipparcos mission in a very broad band of 120000 stars and the two colour Tycho 2 photometry of 2.5 million stars The cornerstone ESA mission GAIA was approved in October 2000 for launch not later than 2012 This mission will use CCDs in time delayed integration mode instead of the photo cathode detectors used in Hipparcos Due to the higher quantum efficiency of the CCDs simultaneous integration of many stars and larger telescope apertures GAIA will utilize the star light a million times more efficiently than Hipparcos resulting in astrometry and multi colour photometry for one billion stars GAIA photometry is crucial for the scientific utilization of the astrometric results and the photometric data have a high scientific content in themselves

Observational Tests of Cosmological Inflation T. Shanks, A.J. Banday, Richard S. Ellis, Carlos S. Frenk, A.W. Wolfendale, 2012-12-06 This book represents the proceedings from the NATO sponsored Advanced Research Workshop entitled Observational Tests of Inflation held at the University of Durham England on the 10th-14th December 1990 In recent years the cosmological inflation model has drawn together the worlds of particle physics theoretical cosmology and observational astronomy The aim of the workshop was to bring together experts in all of these fields to discuss the current status of the inflation theory and its observational predictions The simplest inflation model makes clear

predictions which are testable by astronomical observation Foremost is the prediction that the cosmological density parameter n_l should have a value negligibly different from the critical Einstein de Sitter value of 0.01. The other main prediction is that the spectrum of primordial density fluctuations should be Gaussian and take the Harrison-Zeldovich form. The prediction that n_l in particular leads to several important consequences for cosmology. Firstly there is the apparent contradiction with the limits on baryon density from Big Bang nucleosynthesis which has led to the common conjecture that weakly interacting particles rather than baryons may form the dominant mass constituent of the Universe. Secondly with n_l the age of the Universe is uncomfortably short if the Hubble constant and the ages of the oldest star clusters lie within their currently believed limits.

Solar Electromagnetic Radiation Study for Solar Cycle 22 Judit M. Pap, Claus Fröhlich, Roger K. Ulrich, 2012-12-06 Measurements of solar irradiance both bolometric and at various wavelengths over the last two decades have established conclusively that the solar energy flux varies on a wide range of time scales from minutes to the 11 year solar cycle. The major question is how the solar variability influences the terrestrial climate. The Solar Electromagnetic Radiation Study for Solar Cycle 22 (SOIERS22) is an international research program operating under the auspices of the Solar Terrestrial Energy Program STEP Working Group 1 "The Sun as a Source of Energy and Disturbances". STEP is sponsored by the Scientific Committee of Solar Terrestrial Physics SCOSTEP of the International Council of Scientific Unions ICSU. The main goal of the SOIERS22 1996 Workshop was to bring the international research community together to review the most recent results obtained from observations, theoretical interpretation, empirical and physical models of the variations in the solar energy flux and their possible impact on climate studies. These questions are essential for researchers and graduate students in solar terrestrial physics.

Transactions of the International Astronomical Union Immo Appenzeller, 2012-12-06 IAU Transactions XXIIB summarizes the work of the XXIIInd General Assembly. The discourses given during the Inaugural and Closing Ceremonies are reproduced in Chapters I and III respectively. The proceedings of the two sessions of the General Assembly will be found in Chapter II which includes the Resolutions and the report of the Finance Committee. The Statutes Bye Laws and a few working rules of the Union are published in Chapter IV. The Accounts and other aspects of the administration of the Union are recorded in Chapter V together with the report of the Executive Committee for this last triennium and provide the permanent record for the Union in the period 1991–1994. This volume also contains the Commission reports from The Hague compiled by the Presidents of the Commissions Chapter VI. Finally Chapter VII contains the list of countries adhering to the Union and the alphabetical geographical and commission membership lists of about 8000 individual members. The IAU still appears to be unique among the scientific Unions in maintaining this category of individual membership which contributes in a crucial way to the spirit and the aims of the Union.

Galactic Bulges Herwig Dejonghe, Harm J. Habing, 2012-12-06 In the early summer of 1989 a very informal meeting on the bulge of our Galaxy was held in Leiden. During that meeting Michael Rich proposed to hold a more properly organised symposium on Galactic Bulges in a

few years time After some discussion a Scientific Organising Committee was founded and after some manoeuvring a chairman was chosen a local organiser was assigned and two editors were given instructions A good thing about the location of the meeting was that Ghent is a very beautiful city and had never before hosted an IAU symposium It could be that this plus the fact that he is a very keen amateur astronomer led H M the King of Belgium to offer his patronage to the meeting an offer that we gratefully and we hope gracefully accepted The meeting took place at a resort some 15 km outside Ghent Most participants were housed on the premises a very convenient situation This feeling of togetherness made up for the small shortcomings of the lecture room which is normally used as a sports hall The weather was fair except on the day of the barbecue when pouring rain forced us to go inside

Astronomical Applications of

Astrometry M. A. C. Perryman,2009 The Hipparcos satellite developed and launched by the European Space Agency ESA in 1989 was the first space mission dedicated to astrometry the accurate measurement of positions distances and proper motions of stars Amongst the key achievements of its measurements are refining the cosmic distance scale characterizing the large scale kinematic motions in the Solar neighborhood providing precise luminosities for stellar modelling and confirming Einstein's prediction of the effect of gravity on starlight This authoritative account of the Hipparcos contributions over the last decade is an outstanding reference for astronomers astrophysicists and cosmologists It reviews the applications of the data in different areas describing the subject and the state of the art before Hipparcos and summarizing all major contributions to the topic made by Hipparcos It contains a detailed overview of the Hipparcos and Tycho Catalogues their annexes and their updates Each chapter ends with comprehensive references to relevant literature
