Levings, 2016-08-03 For centuries biologists have marvelled at how anadromous salmonids fish that pass from rivers into oceans and back again survive as they migrate between these two very different environments Yet relatively little is understood about what happens to salmonid species including salmon steelhead char and trout in the estuaries where they make this transition from fresh to salt water This book explains the critical role estuaries play in salmonid survival Ecology of Salmonids in Estuaries around the World synthesizes information from a vast array of literature to describe the specific adaptation of eighteen anadromous salmonids in four genera Hucho Oncorhynchus

Salmo and Salvelinus explain the ecological relationships between anadromous salmonids the fish they coexist with and their estuarine habitat discuss key fitness elements salmonids need for survival including those relating to osmoregulation growth and feeding mechanisms and biotic interactions provide guidance on how to conduct estuarine sampling and scientific aspects of management and recovery plans offer directions for future research The critical reference is further enhanced by extensive supplementary appendices that are available online including data tables additional references on estuarine salmonids and a primer on estuaries and salmonids for citizen scientists General Technical Report PNW. ,1991 *Cattle, Their Predators and Geomatics Research* Michael O'Neal Campbell,2025-08-06 Cattle are currently the most important domesticated mammals with populations numbering in the hundreds of millions and occupying large tracts of land while the conservation of large mammalian carnivores is becoming a dominant discourse in modern geopolitics also claiming large portions of the Earth s land surface Computer based surveying and communication systems including geomatics Big Data and Big Tech are becoming an essential part of human communication and environmental assessments and are critical to large scale assessments of land conflicts A current critical potent but neglected issue concerns the measurement of the interfaces of large carnivore and cattle ecologies in a cross continental format This book offers a novel approach to the interfaces of the sciences of conservation biology animal ecology agricultural development and geomatics which are increasingly interconnected in modern global development scenarios For animal ecology and conservation biology it is about the management systems that have developed from ecological and human parameters For agricultural development topics concern ancestral development physiological characteristics ecological requirements and predation opportunities and conflicts of cattle breeds For geomatics the topics concern the image based and survey based technologies that enable more critical environmental assessments The book takes a novel approach by examining the ancestry of cattle including the aurochs and current wild buffalos gaur banteng yaks bison the process of domestication into taurine and indicine cattle the semi domestication of yaks and water buffalo the ecologies of ancestral and modern large carnivores including bears big cats and canids and how the requirements of these large charismatic mammals conflict with the requirements of cattle and agricultural development in Asia Europe Africa North America and South America This integrative approach contributes to the interests of academic researchers students practitioners and policy makers and general readers **Conservation Physiology for the Anthropocene - Issues and Applications** ,2022-11-18 Conservation Physiology for the Anthropocene A Systems Approach Volume 39B in the Fish Physiology series is a comprehensive synthesis related to the physiology of fish in the Anthropocene This volume helps solve knowledge gaps by considering the many ways in which different physiological systems e g sensory physiology endocrine cardio respiratory bioenergetics water and ionic balance and homeostasis locomotion biomechanics gene function and physiological diversity are relevant to the management and conservation of fish and fisheries Chapters in this release include Using physiology for recovering imperiled species the Delta smelt Conservation
