Hildebrand,James D. Laing,Howard Rosenthal,1977 **Statistical Analysis of Longitudinal Categorical Data in the Social and Behavioral Sciences** Alexander von Eye,Keith E. Niedermeier,2014-04-04 A comprehensive resource for analyzing a variety of categorical data this book emphasizes the application of many recent advances of longitudinal categorical statistical methods Each chapter provides basic methodology helpful applications examples using data from all fields of the social sciences computer tutorials and exercises Written for social scientists and students no advanced mathematical training is required Step by step command files are given for both the CDAS and the SPSS software programs Statistical Methods in Longitudinal Research Alexander von Eye,1990-11-16 These edited volumes present new statistical methods in a way that bridges the gap between theoretical and applied statistics The volumes cover general problems and issues and more specific topics concerning the structuring of change the analysis of time series and the analysis of categorical longitudinal data The book targets students of development and change in a variety of fields psychology sociology anthropology education medicine psychiatry economics behavioural sciences developmental psychology ecology plant physiology and biometry with basic training in statistics and computing Analyzing Rater Agreement Alexander von Eye,Eun Young Mun,2014-04-04 Agreement among raters is of great importance in many domains For example in medicine diagnoses are often provided by more than one doctor to make sure the proposed treatment is optimal In criminal trials sentencing depends among other things on the complete agreement among the jurors In observational studies researchers increase reliability by examining discrepant ratings This book is intended to help researchers statistically examine rater agreement by reviewing four different approaches to the technique The first approach introduces readers to calculating coefficients that allow one to summarize agreements in a single score The second approach involves estimating log linear models that allow one to test specific hypotheses about the structure of a cross classification of two or more raters judgments The third approach explores cross classifications or raters agreement for indicators of agreement or disagreement and for indicators of such characteristics as trends The fourth approach compares the correlation or covariation structures of variables that raters use to describe objects behaviors or individuals These structures can be compared for two or more raters All of these methods operate at the level of observed variables This book is intended as a reference for researchers and practitioners who describe and evaluate objects and behavior in a number of fields including the social and behavioral sciences statistics medicine business and education It also serves as a useful text for graduate level methods or assessment classes found in departments of psychology education

Sungur,Alexander von Eye,2020-11-24 Covers the latest developments in direction dependence research Direction Dependence in Statistical Modeling Methods of Analysis incorporates the latest research for the statistical analysis of hypotheses that are compatible with the causal direction of dependence of variable relations Having particular application in the fields of neuroscience clinical psychology developmental psychology educational psychology and epidemiology direction dependence methods have attracted growing attention due to their potential to help decide which of two competing statistical models is more likely to reflect the correct causal flow The book covers several topics in depth including A demonstration of the importance of methods for the analysis of direction dependence hypotheses A presentation of the development of methods for direction dependence analysis together with recent novel unpublished software implementations A review of methods of direction dependence following the copula based tradition of Sungur and Kim A presentation of extensions of direction dependence methods to the domain of categorical data An overview of algorithms for causal structure learning The book s fourteen chapters include a discussion of the use of custom dialogs and macros in SPSS to make direction dependence analysis accessible to empirical researchers   Configural Frequency Analysis Alexander von Eye,Wolfgang Wiedermann,2022-01-03 This unique book provides a comprehensive and detailed coverage of configural frequency analysis CFA the most useful method of analysis of categorical data in person oriented research It presents the foundations methods and models of CFA and features numerous empirical data examples from a range of disciplines that can be reproduced by the readers It also addresses computer applications including relevant R packages and modules Configural frequency analysis is a statistical method that allows the processing of important and interesting questions in categorical data The perspective of CFA differs from the usual perspective of relations among variables its focus is on patterns of variable categories that stand out with respect to specific hypotheses and as such CFA allows for testing numerous substantive hypotheses The book describes the origins of CFA and their relation to chi square analysis as well as the developments that are based on log linear modeling The models covered range from simple models of variable independence to complex models that are needed when causal hypotheses are tested Empirical data examples are provided for each model New models are introduced for person oriented mediation analysis and locally optimized time series analysis and new results concerning the characteristics of CFA methods are bolstered using Monte Carlo simulations Primarily intended for researchers and students in the social and behavioral sciences the book will also appeal to anyone who deals with categorical data from a person centered perspective   **Handbook of Multivariate Experimental Psychology** John R. Berrar,Werner Dubitzky,Martin Granzow,2007-05-08 In the past several years DNA microarray technology has attracted tremendous interest in both the scientific community and in industry With its ability to simultaneously measure the activity and interactions of thousands of genes this modern technology promises unprecedented new insights into mechanisms of living systems Currently the primary applications of microarrays include gene discovery disease diagnosis and prognosis drug discovery pharmacogenomics and toxicological research toxicogenomics Typical scientific tasks addressed by microarray experiments include the identification of coexpressed genes discovery of sample or gene groups with similar expression patterns identification of genes whose expression patterns are highly differentiating with respect to a set of discerned biological entities e g tumor types and the study of gene activity patterns under various stress conditions e g chemical treatment More recently the discovery modeling and simulation of regulatory gene networks and the mapping of expression data to metabolic pathways and chromosome locations have been added to the list of scientific tasks that are being tackled by microarray technology Each scientific task

corresponds to one or more so called data analysis tasks Different types of scientific questions require different sets of data analytical techniques Broadly speaking there are two classes of elementary data analysis tasks predictive modeling and pattern detection Predictive modeling tasks are concerned with learning a classification or estimation function whereas pattern detection methods screen the available data for interesting previously unknown regularities or relationships

Probabilities, Laws, and Structures Dennis Dieks,Wenceslao J. Gonzalez,Stephan Hartmann,Michael Stöltzner,Marcel Weber,2012-02-02 This volume the third in this Springer series contains selected papers from the four workshops organized by the ESF Research Networking Programme The Philosophy of Science in a European Perspective PSE in 2010 Pluralism in the Foundations of Statistics Points of Contact between the Philosophy of Physics and the Philosophy of Biology The Debate on Mathematical Modeling in the Social Sciences Historical Debates about Logic Probability and Statistics The volume is accordingly divided in four sections each of them containing papers coming from the workshop focussing on one of these themes While the programme s core topic for the year 2010 was probability and statistics the organizers of the workshops embraced the opportunity of building bridges to more or less closely connected issues in general philosophy of science philosophy of physics and philosophy of the special sciences However papers that analyze the concept of probability for various philosophical purposes are clearly a major theme in this volume as it was in the previous volumes of the same series This reflects the impressive productivity of probabilistic approaches in the philosophy of science which form an important part of what has become known as formal epistemology although of course there are non probabilistic approaches in formal epistemology as well It is probably fair to say that Europe has been particularly strong in this area of philosophy in recent years **Problems and Methods in Longitudinal Research** David Magnusson,1994-03-24 An analysis of data treatment methodology for longitudinal research studies **Design and Analysis of DNA Microarray Investigations** Richard M. Simon,Edward L. Korn,Lisa M. McShane,Michael D. Radmacher,George W. Wright,Yingdong Zhao,2006-05-09 DNA microarrays are an important technology for studying gene expression With a single hybridization the level of expression of thousands of genes or even an entire genome can be estimated for a sample of cells Consequently manylaboratoriesareattemptingtoutilizeDNAmicroarraysintheirresearch Whereaslaboratoriesarewellpreparedtoaddressthesigni cantexperimental challenges in obtaining reproducible data from this RNA based assay inv tigators are less prepared to analyze the large volumes of data produced by DNA microarrays Although many software packages have been developed for the analysis of DNA microarray data software alone is insu cient One needs knowledge aboutthevariousaspectsofdataanalysisinordertoselectandutilizesoftware e ectively There is a plethora of analysis methods being published and it is di cult for biologists to determine which methods are valid and appropriate for their problems Many scientists have learned that software is not an adequate substitute for biostatistical knowledge and seek statistical collaborators Unfortunately there is presently a shortage of statisticians who are available and knowled able about

DNA microarrays For statisticians to be e ective collaborators in anyarea theymustinvestthetimetounderstandthesubjectmatterareaand become familiar with the literature so that they can ask the right questions and identify the key issues Our objectives in this book are twofold to provide scientists with infor tion about the design and analysis of studies using DNA microarrays that will enable them to plan and analyze their own studies or to work with statistical collaborators e ectively and to aid statistical and computational scientists wishing to develop expertise in this area *Journal of the National Cancer Institute* ,2008 **Psychological Perspectives of Helplessness and Control in the Elderly** P.S. Fry,1988-12-01 The past few years have witnessed widespread acceptance of the notion that few elderly individuals are willing to stand by silently in the process of growing and to relinquish whatever actual controls autonomy or control beliefs they had in the past Increasingly old age is viewed as the dynamics of growth in mastery control and self efficacy on the one hand and a relative decline in psychological and physical resources on the other It is the intent of this volume to communicate both aspects of these changes and to offer a comprehensive review of the cross fertilization of the field of gerontology and the psychology of reactance freedom and control Leading psychologists and social science researchers from the United States Canada and Europe give their views on the meaning and application of control related constructs having specific implications for the field of human aging They address themselves to one or more of the major themes issues or concerns which currently figure in discussions of control beliefs and control constructs as they apply to aging and old age Written primarily for scholars researchers and developmental theorists interested in the complexities and generativity of control constructs and their applications for the psychological well being of older adults the data and issues presented will be equally informative to gero psychologists and mental health professionals concerned with healthy adaptive functioning of the elderly **Decarbonizing Value Chains** Holger Kohl,Günther Seliger,Franz Dietrich,Ha Thuc Vien,2025-06-26 This is an open access book It gathers the proceedings of the 20th Global Conference on Sustainable Manufacturing held on October 9 11 2024 in Binh Duong and Ho Chi Minh City Vietnam With a focus on sustainable manufacturing strategies for decarbonizing supply chains the chapters selected for this book report on models applied to and results achieved in the mobility energy and construction sector covering both aspects of digitalization and the combined application of circular economy and artificial intelligence Moreover they discuss energy efficient process reassembly and reuse and CO_2 neutral production giving a special emphasis to developing sustainable manufacturing in South East Asia This book offers extensive and timely information for both researchers and professionals in the field of manufacturing and business development Log-Linear Models Ronald Christensen,2013-12-14 This book examines log linear models for contingency tables Logistic re gression and logistic discrimination are treated as special cases and gener alized linear models in the GLIM sense are also discussed The book is designed to fill a niche between basic introductory books such as Fienberg 1980 and Everitt 1977 and advanced books such as Bishop Fienberg and Holland 1975 Haberman 1974 and Santner and

Duffy 1989 lt is primarily directed at advanced Masters degree students in Statistics but it can be used at both higher and lower levels The primary theme of the book is using previous knowledge of analysis of variance and regression to motivate and explicate the use of log linear models Of course both the analogies and the distinctions between the different methods must be kept in mind The book is written at several levels A basic introductory course would take material from Chapters I II deemphasizing Section II 4 III Sec tions IV 1 through IV 5 eliminating the material on graphical models Section IV l Chapter VII and Chapter IX The advanced modeling ma terial at the end of Sections VII 1 VII 2 and possibly the material in Section IX 2 should be deleted in a basic introductory course For Mas ters degree students in Statistics all the material in Chapters I through V VII IX and X should be accessible For an applied Ph D **Log-Linear Models and Logistic Regression** Ronald Christensen,2006-04-06 As the new title indicates this second edition of Log Linear Models has been modi ed to place greater emphasis on logistic regression In addition to new material the book has been radically rearranged The fundamental material is contained in Chapters 1 4 Intermediate topics are presented in Chapters 5 through 8 Generalized linear models are presented in Ch ter 9 The matrix approach to log linear models and logistic regression is presented in Chapters 10 12 with Chapters 10 and 11 at the applied Ph D level and Chapter 12 doing theory at the Ph D level The largest single addition to the book is Chapter 13 on Bayesian bi mial regression This chapter includes not only logistic regression but also probit and complementary log log regression With the simplicity of the Bayesian approach and the ability to do almost exact small sample s tistical inference I personally nd it hard to justify doing traditional large sample inferences Another possibility is to do exact conditional inference but that is another story Naturally Ihavecleaneduptheminor awsinthetextthatIhavefound All examples theorems proofs lemmas etc are numbered consecutively within each section with no distinctions between them thus Example 2 3 1 willcomebeforeProposition2 3 2 Exercisesthatdonotappearinasection at the end have a separate numbering scheme Within the section in which it appears an equation is numbered with a single value e g equation 1 Growing up in Times of Social Change Rainer K. Silbereisen,Alexander von Eye,2012-05-24 No detailed description available for Growing up in Times of Social Change Permutation Statistical Methods Kenneth J. Berry,Paul W. Mielke Jr.,Janis E. Johnston,2016-05-03 This research monograph provides a synthesis of a number of statistical tests and measures which at first consideration appear disjoint and unrelated Numerous comparisons of permutation and classical statistical methods are presented and the two methods are compared via probability values and where appropriate measures of effect size Permutation statistical methods compared to classical statistical methods do not rely on theoretical distributions avoid the usual assumptions of normality and homogeneity of variance and depend only on the data at hand This text takes a unique approach to explaining statistics by integrating a large variety of statistical methods and establishing the rigor of a topic that to many may seem to be a nascent field in statistics This topic is new in that it took modern computing power to make permutation methods available to people working in the mainstream of research lly informed audience and can also

easily serve as textbook in graduate course departments such statistics psychology or biology particular the audience for book is teachers of practicing statisticians applied quantitative students fields medical research epidemiology public health biology
