Environmental Protection Agency, 1976 **New Ecoinformatics Tools in Environmental Science** Vladimir F. Krapivin, Costas A. Varotsos, Vladimir Yu. Soldatov, 2015-01-24 This book provides new insights on the study of global environmental changes using the ecoinformatics tools and the adaptive evolutionary technology of geoinformation monitoring The main advantage of this book is that it gathers and presents extensive interdisciplinary expertise in the parameterization of global biogeochemical cycles and other environmental processes in the context of globalization and sustainable development In this regard the crucial global problems concerning the dynamics of the nature society system are considered and the key problems of ensuring the system's sustainable development are studied A new approach to the numerical modeling of the nature society system is proposed and results are provided on modeling the dynamics of the system's characteristics with regard to scenarios of anthropogenic impacts on biogeochemical cycles land ecosystems and oceans The main purpose of this book is to develop a universal guide to information modeling technologies for assessing the function of environmental subsystems under various climatic and anthropogenic conditions **Industry 4.0** Elena B. Zavyalova, Elena G. Popkova, 2022-02-10 This book presents a scientific view of fighting climate change in the economy of the future the foundations of which are being set around the world The authors substantiate the potential of Industry 4.0 in stimulating sustainable development in environmental protection and preservation of natural resources This

book considers the modern experience of fighting climate change based on possibilities of Industry 4.0 at the national scale in view of developed and developing countries with a special focus on Russia and at the corporate scale by the example of transnational corporations. It determines the future contribution of Industry 4.0 into development of responsible production and consumption and compiles the outlines of green economy in Industry 4.0. It offers recommendations for control of climate change in Industry 4.0 and presents the authors' vision of ecological responsibility in Industry 4.0 for implementing the sustainable development goals. This book will be of interest to academics and practitioners interested in climate change and development of Industry 4.0 as well contributing to a national economic policy for fighting climate change and corporate strategies of sustainable development in Industry 4.0.

The field of loss prevention is and continues to be of supreme importance to countless companies, municipalities and governments around the world and Lees is a detailed reference to defending against hazards. Recognized as the standard work for chemical and process engineering safety professionals, it provides the most complete collection of information on the theory, practice, design, elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all encompassing three volume reference instead. The process safety encyclopedia, trusted worldwide for over 30 years, now available in print and online to aid searchability and portability. Over 3,600 print pages cover the full scope of process safety and loss prevention, compiling theory, practice, standards, legislation, case studies and lessons learned in one resource as opposed to multiple sources.

Ocean Waves Breaking and Marine Aerosol Fluxes Stanislaw R. Massel, 2007-10-10 The atmosphere and the ocean form a coupled system which exchanges heat, momentum and water at the air-sea interface. The interface is dynamic and masses and energy are continually transferred across the air-sea interface. The energy flow from the atmosphere to the ocean generates an aerodynamically rough sea surface. If the energy flow is sufficiently intense at some points, the surface waves will lose their stability and eventually break. Breaking is a very localized and non-stationary phenomenon that is a source of vorticity and turbulence. Dissipated energy becomes available for mixing the water layers and for whitecapping of various scales.

Whitecapping is a strongly nonlinear process which involves instability of the surface waves with space and time scales several orders of magnitude smaller than those associated with gravity wave motion. Whitecaps are usually formed at or near the crests of the larger waves and occur in groups with successive crests breaking downwind of one another. Wave breaking is the dominant generator of the primary marine aerosol sea salt and it is a major factor in the air-sea exchange of gases including carbon dioxide. Most of the aerosol generated from natural waters is in the form of jet and film drops from the bursting of air bubbles. Monahan and Van Patten 1989. The enriched aerosols associated with the ejected droplets are very important in maintaining a source of salt-laden cloud condensation nuclei as well as interfacial trace constituents including bacteria, viruses, heavy metals, radioactivity, and organic material. Kerman 1986. N.A.P.C.A. Abstract Bulletin United States. Environmental Protection Agency, 1974.

Rotating Hydraulics Lawrence L.J. Pratt, John A. Whitehead, 2007-12-26. This book thoroughly covers the development of the theory of rotating hydraulics making frequent use of supporting laboratory models and observational data. The need to understand rotating hydraulic phenomena is growing as general interest in climate and global circulation is continuously increasing. The book details cutting edge research and includes many exercises. **American Book Publishing Record**, 2002.
