*Particle Packing Method for Recycled Aggregate Concrete* Subhasis Pradhan, Shailendra

Kumar, Sudhirkumar V. Barai, 2024-02-27 This book highlights the use of commercially available recycled aggregate concrete RAC extracted from multiple construction and demolition sites considering it as a viable alternative to conventional aggregate. It further describes the advanced techniques such as scanning electron microscopy, nanoindentation, thermogravimetric analysis, and X-ray microtomography, shedding light on the deep-rooted causes of inferior macro-mechanical performance of RAC and the advantages of particle packing method design approach in this regard. It then describes the improved properties of RAC with the help of macro-mechanical performance studies, microstructural characterization, and fracture analysis. The systematic and in-depth presentation of the use of recycled coarse aggregate as an alternative to conventional aggregate for the preparation of structural concrete will guide researchers on subsequent research in RAC and provide assistance to structural engineers and concrete manufacturers for the usage of RAC.

Dennis Dinger, 2011-10-12 This book presents a study of angels as they are depicted in the pages of the Bible. What are angels? How does God use them? Are they still working in this world? These and similar questions are addressed in this study. God has used angels throughout recorded history, and He still uses them today. Many people, however, do not believe angels exist any more than they believe that heaven and hell are real places or that God and the devil truly exist. Many examples of the work of angels are presented throughout both the Old and New Testaments. In this study, we consider details of those accounts. What is the goal of this study for everyone to fully appreciate the capabilities, characteristics, and functions of this class of higher beings known as angels. Recent Trends in Phosphate Mining and Beneficiation and Related Waste Management

Mostafa Benzaazoua, Yassine Taha, 2020-02-11 The extraction of apatite minerals is becoming more and more crucial with the depletion of high-grade ores. At the same time, many streams of waste are continuously being produced by the phosphate industry, including calcareous and siliceous waste, rocks, clayey sludge, and phosphogypsum. These waste products are produced in huge volumes, reaching a ratio of between 5 to 10 tons of waste per each ton of concentrated phosphate. The management of these waste products is becoming a real issue in terms of growing public awareness and environmental and financial aspects. In addition, phosphate ores are known to contain other critical raw materials (CRM) such as rare earth elements and uranium. The recovery of these vital elements from phosphate waste may help to develop the needs of the green energy of the future and contribute to the achievement of the sustainable development goals. In this Special Issue, insights related to the following aspects were studied: phosphate extraction and beneficiation, novel phosphate ores, the fine

characterization of phosphate ores and waste phosphoric acid production critical raw material CRM recovery from phosphate ores and waste reprocessing of phosphate wastes and finally the valorization and reuse of phosphate waste and phosphogypsum
