Lohse, Fred Valdez, Jr., 2010-01-01

Much of what we currently know about the ancient Maya concerns the activities of the elites who ruled the societies and left records of their deeds carved on the monumental buildings and sculptures that remain as silent testimony to their power and status But what do we know of the common folk who labored to build the temple complexes and palaces and grew the food that fed all of Maya society This pathfinding book marshals a wide array of archaeological ethnohistorical and ethnographic evidence to offer the fullest understanding to date of the lifeways of ancient Maya commoners Senior and emerging scholars contribute case

studies that examine such aspects of commoner life as settlement patterns household organization and subsistence practices Their reports cover most of the Maya area and the entire time span from Preclassic to Postclassic This broad range of data helps resolve Maya commoners from a faceless mass into individual actors who successfully adapted to their social environment and who also held primary responsibility for producing the food and many other goods on which the whole Maya society depended

Ancient Maya Arthur Demarest,2004-12-09 In this new archaeological study Arthur Demarest brings the lost pre Columbian civilization of the Maya to life In applying a holistic perspective to the most recent evidence from archaeology paleoecology and epigraphy this theoretical interpretation emphasises both the brilliant rain forest adaptations of the ancient Maya and the Native American spirituality that permeated all aspects of their daily life Demarest draws on his own discoveries and the findings of colleagues to reconstruct the complex lifeways and volatile political history of the Classic Maya states of the first to eighth centuries He provides a new explanation of the long standing mystery of the ninth century abandonment of most of the great rain forest cities Finally he draws lessons from the history of the Classic Maya cities for contemporary society and for the ongoing struggles and resurgence of the modern Maya peoples who are now re emerging from six centuries of oppression

A Favored Place Alfred H. Siemens, 2013-04-24 The wetlands of the San Juan Basin in Central Veracruz Mexico have been a favored place since the fifth century A D when Prehispanic people built an extensive network of canals and raised fields that allowed for almost year round agriculture Alfred Siemens's discovery of the remains of this network in the 1970s led him to uncover fifteen centuries of land use history in the region This book contains a full record of his findings Siemens organizes his history of the San Juan Basin around the question What relationships exist between Prehispanic agriculture and the production systems of the tropical lowlands in our own time This focus allows him to chart the changes in human perceptions and uses of the landscape from the Prehispanic wetland agricultural system to the drained pastures of today's cattle ranches Amplified with air oblique photography maps and tables and enriched with data from archaeology and colonial archives this is an authoritative historical geography of a wetland landscape Or in the author's more modest words It seems to me that what I have here is a biography of a swamp

Living with the Ancestors Patricia A. McAnany, 2013 The first edition of this book proved to be extremely useful to students of archaeology because it provided a highly readable explanation for why people might bury valued family members under house and plaza floors in Preclassic and Classic Maya societies of the first millennium BCE and CE By casting this ancestralizing practice within the larger framework of land inheritance identity and genealogies of place the author demonstrates the cultural logic of a practice that initially appears alien to Western eyes This new edition contains an entirely
