Pendejo Cave Richard S. MacNeish, Jane G. Libby, Jane G. Liddy, 2003 This account of the archaeology of a cave in southern New Mexico makes a dramatic contribution to the ongoing debate over how long human beings have lived in the Americas The findings presented here show that human settlement may go back as far as 75 000 years before the present whereas the long accepted Clovis dates showed humans only about 12 000 years ago MacNeish and his colleagues subjected the cave its environs and its contents to rigorous interdisciplinary investigation The first section of this volume comprises their reports on the changing environment of the area The second section concentrates on the excavation of the cave s layers presenting the results of radiocarbon dating and describing the evidence of human occupation including friction skin prints and human hair The third section discusses the cultural implications of the materials recovered and suggests how the ancient peoples may have exploited the changing environment and developed different ways of life throughout the Americas before the time of Clovis man No serious discussion of early inhabitants in the New World can disregard the findings presented in this monumental work of scholarship

The South American Camelids Duccio Bonavia, 2009-02-01 One of the most significant differences between the New World s major areas of high culture is that Mesoamerica had no beasts of burden and wool while the Andes had both Four members of the camelid family wild guanacos and vicunas and domestic llamas and alpacas were native to the Andes South American peoples relied on these animals for meat and wool and as beasts of burden to transport goods all over the Andes In this book Duccio Bonavia tackles major questions about these camelids from their

domestication to their distribution at the time of the Spanish conquest One of Bonavia's hypotheses is that the arrival of the Europeans and their introduced Old World animals forced the Andean camelids away from the Pacific coast creating the mistaken impression that camelids were exclusively high altitude animals Bonavia also addresses the diseases of camelids and their population density suggesting that the original camelid populations suffered from a different type of mange than that introduced by the Europeans This new mange he believes was one of the causes behind the great morbidity of camelids in Colonial times In terms of domestication while Bonavia believes that the major centers must have been the puna zone intermediate zones he adds that the process should not be seen as restricted to a single environmental zone Bonavia's landmark study of the South American camelids is now available for the first time in English This new edition features an updated analysis and comprehensive bibliography In the Spanish edition of this book Bonavia lamented the fact that the zooarchaeological data from R S MacNeish's Ayacucho Project had yet to be published In response the Ayacucho's Project's faunal analysts Elizabeth S Wing and Kent V Flannery have added appendices on the Ayacucho results to this English edition This book will be of broad interest to archaeologists zoologists social anthropologists ethnohistorians and a wide range of students

Maize Duccio Bonavia, 2013-05-13 This book examines one of the thorniest problems of ancient American archaeology the origins and domestication of maize Using a variety of scientific techniques Duccio Bonavia explores the development of maize its adaptation to varying climates and its fundamental role in ancient American cultures An appendix by Alexander Grobman provides the first ever comprehensive compilation of maize genetic data correlating this data with the archaeological evidence presented throughout the book This book provides a unique interpretation of questions of dating and evolution supported by extensive data following the spread of maize from South to North America and eventually to Europe and beyond

The Wari Civilization and Their Descendants Mary Glowacki, Gordon F. McEwan, 2020-01-15 Drawing on research conducted in Cuzco Peru *The Wari Civilization and Their Descendants* Imperial Transformation in Pre Inca Cuzco Peru analyzes the political and social transformations that led to the downfall of the Wari civilization in the Andean Middle Horizon period AD 500-1000 and resulted in the rise of the Inca state The contributors to this collection present evidence of the Wari civilization's robust imperialistic occupation of Cuzco and argue that this presence laid the groundwork for later regional polities that can be traced to the Late Horizon Inca period AD 1476-1532 This collection fills a gap in scholarly literature on Cuzco prehistory the provincial southern highlands of the Wari civilization and early imperialism in the Andes

Montane Foragers Mark S. Aldenderfer, 1998 All previous books dealing with prehistoric hunter gatherers in the high Andes have treated ancient mountain populations from a troglodyte's perspective as if they were little different from lowlanders who happened to occupy jagged terrain Early mountain populations have been transformed into generic foragers because the basic nature of high altitude stress and biological adaptation has not been addressed In *Montane Foragers* Mark Aldenderfer builds a unique and penetrating model of montane foraging that justly shatters this traditional approach to

ancient mountain populations Aldenderfer's investigation forms a methodological and theoretical tour de force that elucidates elevational stress what it takes for humans to adjust and survive at high altitudes In a masterful integration of mountain biology and ecology he emphasizes the nature of hunter gatherer adaptations to high mountain environments He carefully documents the cultural history of Asana the first stratified open air site discovered in the highlands of the south central Andes He establishes a number of major occurrences at this revolutionary site including the origins of plant and animal domestication and transitions to food production the growth and packing of forager populations and the advent of some form of complexity and social hierarchy The rich and diversified archaeological record recovered at Asana which spans from 10 000 to 3 500 years ago includes the earliest houses as well as public and ceremonial buildings in the central cordillera Built used and abandoned over many millennia the Asana structures completely transform our understanding of the antiquity and development of native American architecture Aldenderfer's detailed archaeological case study of high elevation foraging adaptation his description of this extreme environment as a viable human habitat and his theoretical model of montane foraging create a new understanding of the lifeways of foraging peoples worldwide

Paleoamerican Odyssey Kelly E. Graf, Caroline V. Ketron, Michael R. Waters, 2014-08-20 As research continues on the earliest migration of modern humans into North and South America the current state of knowledge about these first Americans is continually evolving Especially with recent advances in human genomic studies both of living populations and ancient skeletal remains new light is being shed in the ongoing quest toward understanding the full complexity and timing of prehistoric migration patterns *Paleoamerican Odyssey* collects thirty one studies presented at the 2013 conference by the same name hosted in Santa Fe New Mexico by the Center for the Study of the First Americans at Texas A M University Providing an up to date view of the current state of knowledge in paleoamerican studies the research gathered in this volume presented by leaders in the field focuses especially on late Pleistocene Northeast Asia Beringia and North and South America as well as dispersal routes molecular genetics and Clovis and pre Clovis archaeology

The Emergence of Agriculture Peter White, Timothy Denham, 2020-10-25 This volume the first in the One World Archaeology series is a compendium of key papers by leaders in the field of the emergence of agriculture in different parts of the world Each is supplemented by a review of developments in the field since its publication Contributions cover the better known regions of early and independent agricultural development such as Southwest Asia and the Americas as well as lesser known locales such as Africa and New Guinea Other contributions examine the dispersal of agricultural practices into a region such as India and Japan and how introduced crops became incorporated into pre existing forms of food production This reader is intended for students of the archaeology of agriculture and will also prove a valuable and handy resource for scholars and researchers in the area

Bones, Boats, and Bison E. James Dixon, 1999 This revolutionary synthesis dispels the stereotype of big game hunters following mammoths across the Bering Land Bridge while painting a vivid picture of marine mammal hunters fishers and general foragers
