Preliminary Considerations Regarding NASA's Bioastronautics Critical Path Roadmap Institute of Medicine, Board on Health Sciences Policy, Committee on Review of NASA's Bioastronautics Critical Path Roadmap, 2005-01-28 Extending the spatial and temporal boundaries of human space flight are important goals for the National Aeronautics and Space Administration NASA yet human space flight remains an endeavor with substantial risks Potential hazards include exposure of the crew to space radiation degraded crew performance related to human behavioral and other health changes failure of life support systems and the adverse effects of space flight on human biological systems The Bioastronautics Critical Path Roadmap BCPR is designed to provide summary assessments of the importance of each risk and the current state of science and technology with respect to minimizing them Preliminary Considerations Regarding NASA's Bioastronautics Critical Path Roadmap assesses the strengths and weaknesses of the content and processes of the BCPR as applied to the missions described in the President's exploration initiative and identifies the unique challenges for accomplishing its goals and objectives

A Risk Reduction Strategy for Human Exploration of Space National Research Council, Institute of Medicine, Aeronautics and Space Engineering Board, Space Studies Board, Board on Health Sciences Policy, Committee on Review of NASA's Bioastronautics Roadmap, 2006-03-16 Extending the spatial and temporal boundaries of human space flight is an important goal for the nation and for the National Aeronautics and Space Administration NASA However human space flight remains an endeavor with substantial risks and these risks must be identified managed and mitigated appropriately to achieve the nation's goals in space The Bioastronautics Roadmap BR is the result of extensive commendable efforts on the part of NASA to prioritize research efforts to meet these challenges In 2003 NASA asked the Institute of Medicine IOM in collaboration with the Division on Engineering and Physical Sciences of the National Academies to conduct a review of the BR Specifically NASA asked the committee to 1 conduct a comprehensive assessment and report of the strengths and weaknesses of the content and processes of the Bioastronautics Roadmap as applied to the missions described in the President's exploration initiative and 2 identify the unique challenges for accomplishing its goals and objectives In September 2004 the committee released its preliminary report to NASA entitled Preliminary Considerations Regarding NASA's Bioastronautics Critical Path Roadmap That document presented the committee's preliminary conclusions about the strengths and weaknesses of the April 2004 version of the BR This report A Risk Reductions Strategy for Human Exploration of Space builds on those preliminary conclusions and provides recommendations to NASA about how to address the issues identified by the committee

Bioastronautics Roadmap National Aeronautics and Space Administration (NASA), 2018-06-15 The Bioastronautics Critical Path Roadmap is the framework used to identify and assess the risks to crews exposed to the hazardous environments of space It guides the implementation of research strategies to

prevent or reduce those risks Although the BCPR identifies steps that must be taken to reduce the risks to health and performance that are associated with human space flight the BCPR is not a critical path analysis in the strict engineering sense The BCPR will evolve to accommodate new information and technology development and will enable NASA to conduct a formal critical path analysis in the future As a management tool the BCPR provides information for making informed decisions about research priorities and resource allocation The outcome driven nature of the BCPR makes it amenable for assessing the focus progress and success of the Bioastronautics research and technology program The BCPR is also a tool for communicating program priorities and progress to the research community and NASA management Johnson Space Center

Bioastronautics NASA-University Conference on the Science and Technology of Space Exploration, NASA-University Conference on the Science and Technology of Space Exploration, Chicago, 1962, 1962 **Review of NASA's Biomedical Research Program** National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Committee on Space Biology and Medicine, 2000-09-09 The 1998 Committee on Space Biology and Medicine CSBM report A Strategy for Research in Space Biology and Medicine in the New Century assessed the known and potential effects of spaceflight on biological systems in general and on human physiology behavior and performance in particular and recommended directions for research sponsored over the next decade by the National Aeronautics and Space Administration NASA The present follow up report reviews specifically the overall content of the biomedical research programs supported by NASA in order to assess the extent to which current programs are consistent with recommendations of the Strategy report for biomedical research activities In general NASA programs concerned with fundamental gravitational biology are not considered here The committee also notes that this report does not include an evaluation of NASA's response to the Strategy report which had only recently been released at the initiation of this study Review of NASA's Biomedical Research Program summarizes the committee's findings from its review of 1 NASA's biomedical research and 2 programmatic issues described in the Strategy report that are relevant to NASA's ability to implement research recommendations Recapturing a Future for Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2012-01-30 More than four decades have passed since a human first set foot on the Moon Great strides have been made in our understanding of what is required to support an enduring human presence in space as evidenced by progressively more advanced orbiting human outposts culminating in the current International Space Station ISS However of the more than 500 humans who have so far ventured into space most have gone only as far as near Earth orbit and none have traveled beyond the orbit of the Moon Achieving humans further progress into the solar system had proved far more difficult than imagined in the heady days of the Apollo missions but the potential rewards remain substantial During its more than 50 year history NASA's success in human space exploration has depended on the agency's ability to effectively address a wide

range of biomedical engineering physical science and related obstacles an achievement made possible by NASA's strong and productive commitments to life and physical sciences research for human space exploration and by its use of human space exploration infrastructures for scientific discovery The Committee for the Decadal Survey of Biological and Physical Sciences acknowledges the many achievements of NASA which are all the more remarkable given budgetary challenges and changing directions within the agency In the past decade however a consequence of those challenges has been a life and physical sciences research program that was dramatically reduced in both scale and scope with the result that the agency is poorly positioned to take full advantage of the scientific opportunities offered by the now fully equipped and staffed ISS laboratory or to effectively pursue the scientific research needed to support the development of advanced human exploration capabilities Although its review has left it deeply concerned about the current state of NASA's life and physical sciences research the Committee for the Decadal Survey on Biological and Physical Sciences in Space is nevertheless convinced that a focused science and engineering program can achieve successes that will bring the space community the U S public and policymakers to an understanding that we are ready for the next significant phase of human space exploration The goal of this report is to lay out steps and develop a forward looking portfolio of research that will provide the basis for recapturing the excitement and value of human spaceflight thereby enabling the U S space program to deliver on new exploration initiatives that serve the nation excite the public and place the United States again at the forefront of space exploration for the global good
