**Prelude to the Space Age** Frank H. Winter, 1983      **Rockets Into Space** Frank H. Winter, 1990 Since ancient times men and women have dreamed of soaring among the stars but only in this century has that dream been realized In **Rockets into Space** Frank Winter tells the fascinating story of the modern launch vehicle from the mythological musings of the Babylonians and Greeks to the present day reality of manned and unmanned space flight In concise yet comprehensive chapters dense with anecdotal detail Winter tracks the theoretical formulations and technological breakthroughs that have charted the evolution of rocket propulsion and vehicle design He pays particular attention to the remarkable contributions of pioneers Konstantin Tsiolkovsky Robert Goddard Hermann Oberth Eugen S nger and Sergei Korolev whose genius and vision paved the way for later innovation He describes the clandestine development of the V 2 rocket in Germany under the technical leadership of Wernher von Braun and its dramatic impact on postwar rocket research and satellite development in the United States and the Soviet Union He also chronicles the complex events of the last three decades which have produced ever more sophisticated rockets capable of launching larger payloads from weapons to weather and communications satellites Finally he surveys exotic propulsion systems nuclear electric solar photon laser that lie on the frontiers of science today but that will shape the spaceflight and space policy decisions of tomorrow **Rockets into Space** is an authoritative entertaining guidebook for all who are interested in the history of space travel      **This New Ocean** William E. Burrows, 2010-09-29 It was all part of man s greatest adventure landing men on the Moon and sending a rover to Mars finally seeing the edge of the universe and the birth of stars and launching planetary explorers across the solar system to Neptune and beyond The ancient dream of breaking gravity s hold and taking to space became a reality only because of the intense cold war rivalry between the superpowers with towering geniuses like Wernher von Braun and Sergei Korolyov shelving dreams of space travel and instead developing rockets for ballistic missiles and space spectacles Now that Russian archives are open and thousands of formerly top secret U S documents are declassified an often startling new picture of the space age emerges the frantic effort by the Soviet Union to beat the United States to the Moon was doomed from the beginning by gross inefficiency and by infighting so treacherous that Winston Churchill likened it to dogs fighting under a carpet there was more than science behind the United States suggestion that satellites be launched during the International Geophysical Year and in one crucial respect Sputnik was a godsend to Washington the hundred odd German V 2s that provided the vital start to the U S missile and space programs legally belonged to the Soviet Union and were spirited to the United States in a derring do operation worthy of a spy thriller despite NASA s claim that it was a civilian agency it had an intimate relationship with the military at the outset and still does a distinction the Soviet Union never pretended to make constant efforts to portray astronauts and cosmonauts as Boy Scouts were often contradicted by reality the Apollo missions to the Moon may have been an unexcelled political triumph and feat of exploration but they also created a headache for the

space agency that lingers to this day This New Ocean is based on 175 interviews with Russian and American scientists and engineers on archival documents including formerly top secret National Intelligence Estimates and spy satellite pictures and on nearly three decades of reporting The impressive result is this fascinating story the first comprehensive account of the space age Here are the strategists and war planners engineers and scientists politicians and industrialists astronauts and cosmonauts science fiction writers and journalists and plain ordinary unabashed dreamers who wanted to transcend gravity's shackles for the ultimate ride The story is written from the perspective of a witness who was present at the beginning and who has seen the conclusion of the first space age and the start of the second **American Military History** Daniel K.

Blewett, 2009 In this companion volume to his 1995 bibliography of the same title Daniel Blewett continues his foray into the vast literature of military studies As did its predecessor it covers land air and naval forces primarily but not exclusively from a U S perspective with the welcome emergence of small wars from publishing obscurity In addition to identifying relevant organizations and associations Blewett has gathered together the very best in chronologies bibliographies biographical dictionaries indexes journals abstracts glossaries and encyclopedias each accompanied by a brief descriptive annotation This work remains a pertinent addition to the general reference collections of public and academic libraries as well as special libraries government documents collections military and intelligence agency libraries and historical societies and museums

*Frontiers of Space Exploration* Roger D. Polianski, 2009-11-09 Der Start des sowjetischen Satelliten Sputnik am 4 Oktober 1957 löste im Westen einen Schock aus während für die Sowjetunion eine neue kosmische Ära einleitete Doch der Sputnik Flug hatte nicht nur technische und politische Bedeutung Erstmals gehen die Autorinnen und Autoren in diesem Band auch den grundlegenden kulturellen Wandlungen nach die aus dem Beginn der Raumfahrt resultierten Das Themenspektrum reicht von der Veränderung des kollektiven Zeitempfindens und der Raumästhetik über Wandlungen in der visuellen Kultur der Sowjetunion bis zu ideengeschichtlichen und literarischen Adaptionen der Weltraumfaszination How We Got to the Moon Marsha Freeman, 1993 Prologue by Konrad Dannenberg Hermann Oberth the father of space travel The battle of the formulae From theory to experimentation Peenemünde a scientific mobilization How the A 4 rocket became the V 2 Coming to America Operation Paperclip The space age begins Willy Ley rallies the nation for space Wernher von Braun the Columbus of space Kraft Ehricks extraterrestrial imperative

*Paperbound Books in Print*, 1983 Books in Print, 1977 *This New Ocean* William E. Burrows, 1999-11-05 It was all part of man's greatest adventure landing men on the Moon and sending a rover to Mars finally seeing the edge of the universe and the birth of stars and launching planetary explorers across the solar system to Neptune and beyond The ancient dream of breaking gravity's hold and taking to space became a reality only because of the intense cold war rivalry between

the superpowers with towering geniuses like Wernher von Braun and Sergei Korolyov shelving dreams of space travel and instead developing rockets for ballistic missiles and space spectacles Now that Russian archives are open and thousands of formerly top secret U S documents are declassified an often startling new picture of the space age emerges the frantic effort by the Soviet Union to beat the United States to the Moon was doomed from the beginning by gross inefficiency and by infighting so treacherous that Winston Churchill likened it to dogs fighting under a carpet there was more than science behind the United States suggestion that satellites be launched during the International Geophysical Year and in one crucial respect Sputnik was a godsend to Washington the hundred odd German V 2s that provided the vital start to the U S missile and space programs legally belonged to the Soviet Union and were spirited to the United States in a derring do operation worthy of a spy thriller despite NASA s claim that it was a civilian agency it had an intimate relationship with the military at the outset and still does a distinction the Soviet Union never pretended to make constant efforts to portray astronauts and cosmonauts as Boy Scouts were often contradicted by reality the Apollo missions to the Moon may have been an unexcelled political triumph and feat of exploration but they also created a headache for the space agency that lingers to this day This New Ocean is based on 175 interviews with Russian and American scientists and engineers on archival documents including formerly top secret National Intelligence Estimates and spy satellite pictures and on nearly three decades of reporting The impressive result is this fascinating story the first comprehensive account of the space age Here are the strategists and war planners engineers and scientists politicians and industrialists astronauts and cosmonauts science fiction writers and journalists and plain ordinary unabashed dreamers who wanted to transcend gravity s shackles for the ultimate ride The story is written from the perspective of a witness who was present at the beginning and who has seen the conclusion of the first space age and the start of the second     *Dawn of the Space Age* Harry Harper,1946     *The Conquest of Space* David Lasser,2002 David Lasser stands as one of the least known but extraordinary pioneers of spaceflight In 1930 he founded the American Interplanetary Society AIAA the same year he wrote this book the first book ever written in the English language to address the notion of spaceflight as a serious possibility The book has not been in print since 1931 and yet it still stands up to scrutiny The lucid style with which Lasser explains the basic concepts of rocketry make it a delight for anyone to read

*Blazing the Trail* Mike Gruntman,2004 Winner of the Luigi Napolitano Award 2006 from the International Academy of Astronautics This book presents the fascinating story of the events that paved the way to space It introduces the reader to the history of early rocketry and the subsequent developments that led into the space age People of various nations and from various lands contributed to the breakthrough to space and the book takes the reader to faraway places on five continents It also includes many quotes to give readers a flavor of how the participants viewed the developments Most publications on the topic either target narrow aspects of rocket history or are popular books that scratch the surface with minimal and sometimes inaccurate technical details This book bridges the gap It contains numerous technical details usually unavailable

in popular publications The details are not overbearing and anyone interested in rocketry and space exploration will navigate through the book without difficulty There are 340 figures and photographs many appearing for the first time     **The Coming of the Space Age** Arthur Charles Clarke,1967     **To a Distant Day** Chris Gainor,2020-04-01 Insightful instructive and definitely worth the read Greg Andres Journal of the Royal Astronomical Society of Canada As someone who has been teaching a course on space exploration for many years and has visited most of NASA s space centers I have found plenty of new and valuable material in To a Distant Day I recommend the book to all who wish to know more about the conditions people and discoveries between 1890 and 1960 that led to the space age Pangratios Papacosta Physics Today Although the dream of flying is as old as the human imagination the notion of rocketing into space may have originated with Chinese gunpowder experiments during the Middle Ages Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space Chris Gainor s irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky Robert Goddard and Hermann Oberth who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration It shows us German engineer Wernher von Braun creating the V 2 the first large rocket which though opening the door to space failed utterly as the wonder weapon it was meant to be From there Gainor follows the space race to the Soviet Union and the United States giving us a close look at the competitive hysteria that led to Sputnik satellites space probes and finally human flight into space in 1961 As much a story of cultural ambition and personal destiny as of scientific progress and technological history To a Distant Day offers a complete and thoroughly compelling account of humanity s determined efforts sometimes poignant sometimes amazing sometimes mad to leave the earth behind     *Rockets and Revolution* Michael G. Smith,2014-12-01 Rockets and Revolution offers a multifaceted study of the race toward space in the first half of the twentieth century examining how the Russian European and American pioneers competed against one another in the early years to acquire the fundamentals of rocket science engineer simple rockets and ultimately prepare the path for human spaceflight Between 1903 and 1953 Russia matured in radical and dramatic ways as the tensions and expectations of the Russian revolution drew it both westward and spaceward European and American industrial capacities became the models to imitate and to surpass The burden was always on Soviet Russia to catch up enough to achieve a number of remarkable firsts in these years from the first national rocket society to the first comprehensive surveys of spaceflight Russia rose to the challenges of its Western rivals time and again transcending the arenas of science and technology and adapting rocket science to popular culture science fiction political ideology and military programs While that race seemed well on its way to achieving the goal of space travel and exploring life on other planets during the second half of the twentieth century these scientific advances turned back on humankind with the development of the intercontinental ballistic missile and the coming of the Cold War     *Escape from Earth* Fraser MacDonald,2019
