

6 Signs of Employee Burnout

Managers should be able to recognize the following six signs of burnout to help affected employees get the support they need.

HIGHER SENSITIVITY

Employees experiencing burnout are likely to be more sensitive and emotional about things they weren't before.

EXHAUSTION

Employees who are experiencing burnout will display emotional, mental, and physical signs of exhaustion, as well as an inability to focus.

INCREASED ABSENCES

If an employee is experiencing burnout, they're more likely to take days off from work due to illness or inability to get out of bed to come into work.

DISENGAGEMENT

A burned-out employee is more likely to become disengaged with their work, their co-workers, and (sometimes) their life in general.

INCREASED MISTAKES OR ACCIDENTS

If an employee is experiencing burnout, the chances of them being involved in a workplace accident or making errors will increase.

WITHDRAWAL AND ISOLATION

Burnout can cause employees to withdraw from their work and peers. For example, an extroverted employee who is experiencing burnout may become increasingly introverted.

Cultivating Professional Resilience in Direct Practice Jason M. Newell, 2017-09-26 Overwhelming empirical evidence indicates that new social workers particularly those going into child welfare or other trauma related care will discover emotional challenges including the indirect or secondary effects of the trauma work itself professional burnout and

compassion fatigue However the newly revised CSWE Educational Policy and Accreditation Standards EPAS does not mandate the inclusion of content related to self care in social work curriculum or field education In a textbook that bridges the gap between theoretical and pragmatic approaches to this important issue in human service work Jason M Newell provides a potential resolution by conceptualizing self care as an ongoing and holistic set of practice behaviors described as the key to professional resilience To address the effects of trauma related care on direct practitioners Newell provides a comprehensive competency based model for professional resilience examining four key constructs stress empathy resilience and self care from a range of theoretical dimensions For those who work with vulnerable populations the tendency to frame self care solely within organizational context overlooks the importance of self care in domains beyond the agency setting Alternatively he uses a framework grounded in the ecological systems perspective conceptualizing self care as a broader set of practice behaviors pertaining to the whole person including the physical interpersonal organizational familial and spiritual domains of the psychosocial self Alongside professional self care practices at the organizational level Newell makes a case for the pragmatic role of recreational activities time with family and friends physical health spirituality and mindfulness The application of a comprehensive approach to self care practice has potential to empower practitioners to remain resilient and committed to the values mission and spirit of the social work profession in the face of trauma 101 Career Myths

Cognitive and Mental Health Improvement Under- and Post-COVID-19

Chong Chen, Gabriele Nibbio, Yuka Kotozaki, 2025-03-19 An increasing body of research suggests that the COVID 19 pandemic has worsened global mental health and caused more cognitive impairments Whereas the COVID 19 pandemic is still ongoing in some regions it is expected to be ending for most regions in the very near future From a psychological psychiatric and public mental health perspective it is of vital importance to conduct effective and efficient interventions to promote cognitive and mental health for they not only are essential for us to cope with the ongoing pandemic but also necessary for us to rebuild a better world post the pandemic Not to say that a healthy cognitive and mental health state is at the core of human wellbeing and deserves its own place From previous studies and everyday practices we already know that regular exercise appropriate sleep nutritious diet close social ties connection with nature mindfulness among others help improve cognition and boost mental health However the optimal regimen for each specific cognitive and mental health outcome for a specific population including both those of healthy and clinical is unclear and remain to be identified Furthermore the underlying psychological physiological and neurobiological mechanisms through which each activity or

intervention improves cognition and promotes mental health are to be clarified The aim of this Research Topic is to publish a wide range of studies that help address these unsolved issues and advance our understanding of what activities and interventions help improve cognition and promote mental health Any topics relevant to cognitive functions academic or work performance affective wellbeing and mental health are welcome Both studies of acute and chronic regular effects are welcome The subjects can be healthy human volunteers clinical patients or animals of different ages and sexes Article types include but are not limited to original research brief research reports clinical trials reviews meta analyses hypothesis and theory articles For original research and brief research reports the design can be cross sectional longitudinal or interventional as long as they provide insights into cognitive and mental health promotion
