Coral Reef Remote Sensing James A. Goodman, Samuel J. Purkis, Stuart R. Phinn, 2013-04-18 Remote sensing stands as the defining technology in our ability to monitor coral reefs as well as their biophysical properties and associated processes at regional to global scales With overwhelming evidence that much of Earth's reefs are in decline our need for large scale repeatable assessments of reefs has never been so great Fortunately the last two decades have seen a rapid expansion in the ability for remote sensing to map and monitor the coral reef ecosystem its overlying water column and surrounding environment Remote sensing is now a fundamental tool for the mapping monitoring and management of coral reef ecosystems Remote sensing offers repeatable quantitative assessments of habitat and environmental characteristics over spatially extensive areas As the multi disciplinary field of coral reef remote sensing continues to mature results demonstrate that the techniques and capabilities continue to improve New developments allow reef assessments and mapping to be performed with higher accuracy across greater spatial areas and with greater temporal frequency The increased level of information that remote sensing now makes available also allows more complex scientific questions to be addressed As defined for this book remote sensing includes the vast array of geospatial data collected from land water ship airborne and satellite platforms The book is organized by technology including visible and infrared sensing using photographic multispectral and hyperspectral instruments active sensing using light detection and ranging LiDAR acoustic sensing using ship autonomous underwater vehicle AUV and in water platforms and thermal and radar instruments

Emphasis and Audience This book serves multiple roles It offers an overview of the current state of the art technologies for reef mapping provides detailed technical information for coral reef remote sensing specialists imparts insight on the scientific questions that can be tackled using this technology and also includes a foundation for those new to reef remote sensing The individual sections of the book include introductory overviews of four main types of remotely sensed data used to study coral reefs followed by specific examples demonstrating practical applications of the different technologies being discussed Guidelines for selecting the most appropriate sensor for particular applications are provided

including an overview of how to utilize remote sensing data as an effective tool in science and management The text is richly illustrated with examples of each sensing technology applied to a range of scientific monitoring and management questions in reefs around the world As such the book is broadly accessible to a general audience as well as students managers remote sensing specialists and anyone else working with coral reef ecosystems New Frontiers in Marine Tourism Brian Garrod, Stefan Gössling, 2008 Section I An Introduction to Diving Tourism 1 Introduction Brian Garrod Stefan Gössling Section II The diving tourism experience 2 Market segments and tourist typologies for diving tourism Brian Garrod 3 Perceptions of and interactions with marine environments diving attractions Carl Cater 4 Economic value of diving tourism local income and distribution Alan White and Samonte Tan Section III Environmental economic and social impacts of diving tourism 5 The state of coral reefs and consequences of global environmental change for diving tourism in tropical environments Stefan Gössling Olof Linde 6 Vulnerability of marine mammals to diving tourism activities Susanna Curtin Brian Garrod 7 Environmental management and education the case of PADI Anna Lindgren Jenny Reithe Sophia Trossvik Stefan Gössling Section IV Management of diving tourism 8 The dive industry and social responsibility time to catch up Claudia Townsend 9 Management issues and techniques artificial reefs Peter van Treeck 10 Attitudes to and preferences of divers toward regulation Nola Barker Callum Roberts 11 Compliance with regulations by divers and tour operators Carol Scarpaci 12 Managing diver impact and increasing support for conservation through education Claudia Townsend 13 Tourist diving injury risk and safety Chris Coxon Kay Dimmock and Jeff Wilks **Recent Advances in Marine Biotechnology, Vol. 8** Milton Fingerman, 2003-01-01 This book discusses petroleum spill bioremediation the use of spectroscopy to identify microbial metabolic pathways the detoxification of mercury by using recombinant mercury resistant bacteria and the use of manganese oxidizing bacteria for bioremediation Deep-Sea Mining Rahul Sharma, 2017-03-28 This comprehensive book contains contributions from specialists who provide a complete status update along with outstanding issues encompassing different topics related to deep sea mining Interest in exploration and exploitation of deep sea minerals is seeing a revival due to diminishing grades and increasing costs of processing of terrestrial minerals as well as availability of several strategic metals in seabed mineral resources it therefore becomes imperative to take stock of various issues related to deep sea mining The authors are experienced scientists and engineers from around the globe developing advanced technologies for mining and metallurgical extraction as well as performing deep sea exploration for several decades They invite readers to learn about the resource potential of different deep sea minerals design considerations and development of mining systems and the potential environmental impacts of mining in international waters Remote Sensing of Aquatic Coastal Ecosystem Processes Laurie L. Richardson, Ellsworth F. LeDrew, 2006-02-02 The aquatic coastal zone is one of the most challenging targets for environmental remote sensing Properties such as bottom reflectance spectrally diverse suspended sediments and phytoplankton communities diverse benthic communities and transient events that affect surface reflectance coastal blooms

runoff etc all combine to produce an optical complexity not seen in terrestrial or open ocean systems Despite this complexity remote sensing is proving to be an invaluable tool for Case 2 waters This book presents recent advances in coastal remote sensing with an emphasis on applied science and management Case studies of the operational use of remote sensing in ecosystem studies monitoring and interfacing remote sensing science management are presented Spectral signatures of phytoplankton and suspended sediments are discussed in detail with accompanying discussion of why blue water Case 1 algorithms cannot be applied to Case 2 waters Audience This book is targeted for scientists and managers interested in using remote sensing in the study or management of aquatic coastal environments With only limited discussion of optics and theory presented in the book such researchers might benefit from the detailed presentations of aquatic spectral signatures and to operational management issues While not specifically written for remote sensing scientists it will prove to be a useful reference for this community for the current status of aquatic coastal remote sensing
