Receptor Biochemistry:

Regulation of G Protein Coupled Receptor Function and Expression Jeffrey L. Benovic, 1999-11-12 Recent advances in molecular and cell biology enabling the cloning expression and mutagenesis of signal transduction proteins has prompted an explosion of knowledge in the field of receptor regulation facilitating the discovery of new classes of regulatory proteins and providing a basis and means for manipulating receptor function through multiple intracellular targets This volume covers methods used to examine how the function s of receptors are regulated Understanding how to regulate the function and expression of these receptors is critical in determining how to modify receptors and to translocating receptors away from the cell surface and its recycling Individual chapters focus on specific techniques used to characterize receptors epitope tagging measurement and analysis of receptor phosphorylation analysis of the kinetics of receptor desensitization and assessment of receptor G protein coupling the role of regulatory proteins receptor kinases and phosphatases arrestins in modulating receptor function and the methods used to measure receptor trafficking ligand binding immunofluorescence and expression transcriptional and translational regulation Covers a broad range of important concepts and methodologies which are current in the study of G protein coupled receptors GPCRs G protein coupled receptors make up over 40% of the current pharmacological targets Provides detailed protocols for executing various strategies and offers informed judgments as to what approaches are and aren t useful Volume Editor Jeffrey Benovic is a dominant world leader in the study of receptor regulation of GPCR kinases and is highly respected in the field Receptor Biochemistry and Methodology ,1988 **The Pharmacology of Functional, Biochemical, and Recombinant Receptor Systems** T. Kenakin, J. A. Angus, 2012-12-06 This the 148th volume of the Handbook of Experimental Pharmacology series focuses on the very core of pharmacology namely receptor theory It is fitting that the originator of receptor pharmacology A J CLARK authored the fourth volume of this series 63 years ago In that volume CLARK further developed his version of receptor theory first described four years earlier in his classic book The Mode of Action of Drugs An examination of the topics covered in volume 4 reveals a striking similarity to the topics covered in this present volume pharmacologists today are still as interested in unlocking the secrets of dose response relationships to reveal the biological and chemical basis of drug action as they were over half a century ago Sections in that 1937 volume such as Curves relating exposure to drugs with biological effects and Implications of monomolecular theory show Clark s keen insight into the essential questions that required answers to move pharmacology forward With the advent of molecular biological cloning of human receptors has come a transformation of receptor pharmacology Thus the expression of human receptors into surrogate host cells helped unlock secrets of receptor mechanisms and stimulus transduction pathways To a large extent this eliminates the leap of faith required to apply receptor activity of drugs tested on animal receptor systems to the human therapeutic arena However a new leap of faith concerning the veracity of the effects found in recombinant systems with respect to natural ones is now required **Biochemistry and**

Molecular Biology Compendium Roger L. Lundblad, 2007-06-08 While biomedical investigation has greatly advanced investigators have lost touch with and inadvertently corrupted significant nomenclature at the foundation of their science Nowadays one has to be an insider to even understand the titles of journals as modern biochemists have a tendency to invent new terms to describe old phenomena and apply a

Biochemistry of Taste and Olfaction Robert Cagan, 2012-12-02 Biochemistry of Taste and Olfaction examines the biochemical aspects of taste and olfaction and their relevance to nutrition medicine and food science More specifically it considers the biological processes that influence dietary habits nutritional status and enjoyment of food as well as other important social and biological phenomena It also describes biochemical mechanisms at the peripheral receptor level in taste and olfaction with emphasis on the role of the cell surface along with neurotransmitters and other neurochemical aspects of the olfactory system Organized into five sections comprised of 24 chapters this book begins with an overview of biochemical approaches used in studying the phenomena of taste and olfaction It then proceeds with a discussion of olfactory receptor mechanisms the accessibility of odorant molecules to the receptors the role of cilia in olfactory recognition and the involvement of receptor proteins in vertebrate olfaction Middle chapters focus on the chemosensation major histocompatibility complex and olfactory receptors taste receptor mechanisms biochemistry of sugar reception in insects intensity time phenomena in sugar sweetness and recognition of taste stimuli at the initial binding interaction The reader is also introduced to the physicochemical principles of taste and olfaction molecular mechanisms of transduction in chemoreception biochemical mechanisms in vertebrate primary olfactory neurons neurotransmitter biochemistry of the mammalian olfactory bulb and chemical sensing by bacteria Examples of chemical sensory systems are included This book will be of interest to biochemists physiologists neurobiologists neuroscientists molecular biologists food scientists students and specialists in psychology neurophysiology organic chemistry and nutrition

Cell Surface Receptors Lee E. Limbird, 2004-11-12 Cell Surface Receptors A Short Course on Theory and Methods 3rd Edition links theoretical insights into drug receptor interactions described in mathematical models with the experimental strategies to characterize the biological receptor of interest The study of receptors has changed considerably over the period of the publication of the three editions of this book The cloning of several genomes makes it unlikely that preparations of receptors now or in the future will arise from their purification as trace proteins from native tissues but rather from a myriad of molecular approaches Nonetheless understanding the molecular mechanisms and ultimately the in vivo biology of these receptors means that investigators will engage in molecular cellular and ultimate in vivo strategies It should be of value to investigators who want to identify characterize and understand the biology of a receptor of interest

Receptor Phosphorylation Virinder K. Moudgil, 2018-05-04 The following chapters comprise invited contributions from eminent scientists who are internationally recognized authorities on the subject The chapters have been written to provide the reader with adequate background necessary experimental details and discussion that is easy to comprehend The book has been

organized into four different sections The introductory chapter is meant to briefly summarize the contributions of other authors and discuss phosphorylation of receptor systems not covered in the book in detail The chapters in the second section on protein kinases and phosphatases are quite fundamental to the process of phosphorylation and will aid the reader in appreciating the observations and discussions reported in other chapters The third and fourth sections present discussions on phosphorylation of various receptor systems which are involved in mediating actions of peptide amine and steroid hormones It is hoped that this book will serve as a valuable resource and will be useful to all workers and students in the area of receptor ligand interactions

Receptors, Antibodies and Disease David Evered, Julie Whelan, 2009-09-14 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world

Handbook of Receptors and Channels Stephen J. Peroutka, 1993-10-20 The cloning sequencing and expression of a variety of membrane receptors and channels indicate the existence of at least four superfamilies of molecular structures that mediate signal transduction Presently more than 400 receptors have been cloned and sequenced The Handbook of Receptors and Channels is the first handbook series to present the enormous amount of new molecular biological receptor data in a practical and useful format Each volume in this remarkable series will focus on a specific molecular superfamily of receptors Complete amino acid sequence information on all cloned receptors as well as relevant pharmacological information will be included Furthermore the format for each of the volumes will be consistent to allow for easy comparisons of different molecular subtypes for a given transmitter G Protein Coupled Receptors is the first volume in this new handbook series Topics covered in future volumes include
