Ethnicity and Integration John Stillwell, Maarten van Ham, 2010-07-20 The theme of this volume is ethnicity and the implications for integration of our increasingly ethnically diversified population New research findings from a range of census survey and administrative data sources are presented and case studies are included

Health and Ethnicity Helen Macbeth, Prakash Shetty, 2000-11-23 It is becoming increasingly apparent that certain diseases occur at higher frequencies in different ethnic groups e g Afro Caribbeans and sickle cell anaemia The causes for such differences are only just being investigated and the factors involved are clearly both genetic and non genetic The biological complexity lies in the interaction of genetic variation and lifestyle differences Cultural differences range from diet to traditional remedies from religious beliefs to marriage patterns and much more This multidisciplinary volume discusses these factors with contributions from geneticists medics anthropologists epidemiologists and social scientists Anyone considering variation in health experience due to ethnic factors would be enriched by reading the different perspectives presented in this volume

Genomic Architecture of Schizophrenia Across Diverse Genetic Isolates Kazima Bulayeva, Oleg Bulayev, Stephen Glatt, 2016-11-17 This book presents a long term study in genetic isolates of indigenous small ethnics of Dagestan located in the North East part of Caucasus in Russia Dagestan is characterized by extreme cultural and linguistic differences in a small geographic area and contains 26 indigenous ethnic groups According to archeological data these indigenous highland ethnics have been living in the same area for more than ten thousand years Our long term population genetic study of Dagestan indigenous ethnic groups indicates their close relation to each other and suggests that they evolved from one common ancestral meta population Dagestan has an extremely high genetic diversity between ethnic populations and a low genetic diversity within them Such genetic isolates are exceptional resources for the detection of susceptibility genes for complex diseases because of the reduction in genetic and clinical heterogeneity The founder effect and gene drift in these primary isolates may have caused aggregation of specific haplotypes with limited numbers of pathogenic alleles and loci in some isolates relative to others The book presents a study in four ethnically and demographically diverse genetic isolates with aggregation of schizophrenia that we ascertained within our Dagestan Genetic Heritage Research Project The results obtained support the notion that mapping genes of any complex disease e g schizophrenia in demographically older genetic isolates may be more time and cost effective due to their high clinical and genetic homogeneity in comparison with demographically younger isolates especially with genetically heterogeneous outbred populations
