Numerica A Modeling Language For Global Optimization:

Numerica Pascal Van Hentenryck, Laurent Michel, Yves Deville, 1997 Many science and engineering applications require the user to find solutions to systems of nonlinear constraints or to optimize a nonlinear function subject to nonlinear constraints The field of global optimization is the study of methods to find all solutions to systems of nonlinear constraints and all global optima to optimization problems Numerica is modeling language for global optimization that makes it possible to state nonlinear problems in a form close to the statements traditionally found in textbooks and scientific papers The constraint solving algorithm of Numerica is based on a combination of traditional numerical methods such as interval and local methods and constraint satisfaction techniques This comprehensive presentation of Numerica describes its design functions and implementation It also discusses how to use Numerica effectively to solve practical problems and reports a number of experimental results A commercial implementation of Numerica is available from ILOG under the name ILOG Numerica

Modeling Languages in Mathematical Optimization Josef Kallrath, 2013-12-01 This volume presents a unique combination of modeling and solving real world optimization problems It is the only book which treats systematically the major modeling languages and systems used to solve mathematical optimization problems and it also provides a useful overview and orientation of today's modeling languages in mathematical optimization It demonstrates the strengths and characteristic features of such languages and provides a bridge for researchers practitioners and students into a new world solving real optimization problems with the most advances modeling systems

Global Optimization and Constraint Satisfaction Christian Blier, Christophe Jermann, Arnold Neumaier, 2003-10-28 This book constitutes the thoroughly refereed post proceedings of the First International Workshop on Global Constraints Optimization and Constraint Satisfaction COCOS 2002 held in Valbonne Sophia Antipolis France in October 2002 The 15 revised full papers presented together with 2 invited papers were carefully selected during two rounds of reviewing and improvement The papers address current issues in global optimization mathematical programming and constraint programming they are grouped in topical sections on optimization constraint satisfaction and benchmarking

Global Optimization and Constraint Satisfaction Christophe Jermann, Arnold Neumaier, Djamil Sam, 2005-05-10 The formulation of many practical problems naturally involves constraints on the variables entering the mathematical model of a real life situation to be analyzed It is of great interest to find the possible scenarios satisfying all constraints and if there are many of them either to find the best solution or to obtain a compact explicit representation of the whole feasible set The 2nd Workshop on Global Constrained Optimization and Constraint Satisfaction COCOS 2003 which took place during November 18-21 2003 in Lugano Switzerland was dedicated to theoretical algorithmic and application oriented advances in answering these questions Here global optimization refers to finding the absolutely best feasible point while constraint satisfaction refers to finding all possible feasible points As in COCOS 2002 the results of such workshop see the proceedings 1 the emphasis was on complete solving techniques for problems involving continuous variables that provide all

solutions with full rigor and on applications which however were allowed to have relaxed standards of rigor The participants used the opportunity to meet experts from global optimization mathematical programming constraint programming and applications and to present and discuss ongoing work and new directions in the field Four invited lectures and 20 contributed talks were presented at the workshop The invited lectures were given by John Hooker Logic Based Methods for Global Optimization Jean Pierre Merlet Usual and Unusual Applications of Interval Analysis Hermann Schichl The COCONUT Optimization Environment and Jorge Moré Global Optimization Computational Servers This volume contains the text of Hooker's invited lecture and of 12 contributed talks Copies of the slides for most presentations can be found at <http://www.optimization-online.org>

Constraint satisfaction problems Three papers focus on algorithmic aspects of constraint satisfaction problems *Global Optimization Using Interval Analysis* Eldon Hansen, G. William Walster, 2003-12-19 Employing a closed set theoretic foundation for interval computations Global Optimization Using Interval Analysis simplifies algorithm construction and increases generality of interval arithmetic This Second Edition contains an up to date discussion of interval methods for solving systems of nonlinear equations and global optimization problems It expands and improves various aspects of its forerunner and features significant new discussions such as those on the use of consistency methods to enhance algorithm performance Provided algorithms are guaranteed to find and bound all solutions to these problems despite bounded errors in data in approximations and from use of rounded arithmetic

Pardalos, 2013-12-01 Global Optimization has emerged as one of the most exciting new areas of mathematical programming Global optimization has received a wide attraction from many fields in the past few years due to the success of new algorithms for addressing previously intractable problems from diverse areas such as computational chemistry and biology biomedicine structural optimization computer sciences operations research economics and engineering design and control This book contains refereed invited papers submitted at the 4th international conference on Frontiers in Global Optimization held at Santorini Greece during June 8-12 2003 Santorini is one of the few sites of Greece with wild beauty created by the explosion of a volcano which is in the middle of the gulf of the island The mystic landscape with its numerous multi extrema was an inspiring location particularly for researchers working on global optimization The three previous conferences on Recent Advances in Global Optimization State of the Art in Global Optimization and Optimization in Computational Chemistry and Molecular Biology Local and Global approaches took place at Princeton University in 1991 1995 and 1999 respectively The papers in this volume focus on deterministic methods for global optimization stochastic methods for global optimization distributed computing methods in global optimization and applications of global optimization in several branches of applied science and engineering computer science computational chemistry structural biology and bioinformatics

Essays and Surveys in Global Optimization Charles Audet, Pierre Hansen, Giles Savard, 2005-04-20 Global optimization aims at solving the most general problems of deterministic

mathematical programming to find the global optimum of a nonlinear nonconvex multivariate function of continuous and or integer variables subject to constraints which may be themselves nonlinear and nonconvex In addition once the solutions are found proof of its optimality is also expected from this methodology Therefore with these difficulties in mind global optimization is becoming an increasingly powerful and important methodology Essays and Surveys in Global Optimization is the most recent examination of its mathematical capability power and wide ranging solutions to many fields in the applied sciences

Applied Interval Analysis Luc Jaulin, Michel Kieffer, Olivier Didrit, Eric Walter, 2012-12-06 At the core of many engineering problems is the solution of sets of equations and inequalities and the optimization of cost functions Unfortunately except in special cases such as when a set of equations is linear in its unknowns or when a convex cost function has to be minimized under convex constraints the results obtained by conventional numerical methods are only local and cannot be guaranteed This means for example that the actual global minimum of a cost function may not be reached or that some global minimizers of this cost function may escape detection By contrast interval analysis makes it possible to obtain guaranteed approximations of the set of all the actual solutions of the problem being considered This together with the lack of books presenting interval techniques in such a way that they could become part of any engineering numerical tool kit motivated the writing of this book The adventure started in 1991 with the preparation by Luc Jaulin of his PhD thesis under Eric Walter's supervision It continued with their joint supervision of Olivier Didrit's and Michel Kieffer's PhD theses More than two years ago when we presented our book project to Springer we naively thought that redaction would be a simple matter given what had already been achieved

Building Decision Support Systems Mark Wallace, 2020-04-23 This book introduces readers to the principles of intelligent decision support systems IDSS and how to build them with MiniZinc a free open source constraint programming language Managing an IDSS project requires an understanding of the system's design and behaviour The book enables readers to appreciate what combinatorial optimisation problems are and how modelling a problem provides the basis for solving it It also presents the main algorithms for tackling decision support problems discusses their strengths and weaknesses and explores ways of achieving the necessary scalability when problems become big Moreover to support the learning process it allows readers to try out the ideas described in the text on model applications and puzzles The book highlights the potential benefits of

deploying an IDSS It enables users to recognise the key risks involved and identify which techniques can be applied to minimise them and to understand the decision support technology sufficiently in order to manage or monitor an IDSS project It also helps readers distinguish between good sense and mere jargon when dealing with anyone involved in an IDSS project from sales personnel to software implementers As such it especially appeals to graduate students and advanced professionals who need to learn how to build an IDSS and to tackle the problems on the way
