Computational Molecular Dynamics: Challenges, Methods, Ideas Peter Deuflhard, 1999
On May 21-24 1997 the Second International Symposium on Algorithms for Macromolecular Modelling was held at the Konrad Zuse Zentrum in Berlin. The event brought together computational scientists in fields like biochemistry, biophysics, physical chemistry or statistical physics and numerical analysts as well as computer scientists working on the advancement of algorithms for a total of over 120 participants from 19 countries. In the course of the symposium the speakers agreed to produce a representative volume that combines survey articles and original papers, all refereed to give an impression of the present state of the art of Molecular Dynamics. The 29 articles of the book reflect the main topics of the Berlin meeting which were: i Conformational Dynamics, ii Thermodynamic Modelling, iii Advanced Time Stepping Algorithms, iv Quantum Classical Simulations and Fast Force Field and v Fast Force Field Evaluation.

The volume presents 50 revised full papers selected from a total of 75 submissions. Also included are four invited papers and 15 posters. The papers are organized in topical sections on linear algebra, differential equations and interpolation, Quasi Monte Carlo methods, numerical software, numerical applications, image segmentation and image understanding, motion estimation and block matching, video processing, wavelet techniques, satellite image processing, data structures, data partitioning, resource allocation and performance analysis, cluster computing and simulation, and applications.

Mathematics of Complexity and Dynamical Systems Robert A. Meyers, 2011-10-05
Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics. Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self-organization, e.g., the spontaneous formation of temporal, spatial or functional structures. These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic. The more than 100 entries in this wide-ranging single source work provide a comprehensive explication of the theory and applications of mathematical complexity, covering ergodic theory, fractals and multifractals, dynamical systems, perturbation theory, solitons, systems and

control theory and related topics Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers

Monthly Weather Review, 2002 **Multicomponent and Multiscale Systems** Juergen Geiser, 2015-08-21

This book examines the latest research results from combined multi-component and multi-scale explorations. It provides theory, considers underlying numerical methods, and presents brilliant computational experimentation. Engineering computations featured in this monograph further offer particular interest to many researchers, engineers, and computational scientists working in frontier modeling and applications of multi-component and multi-scale problems. Professor Geiser gives specific attention to the aspects of decomposing and splitting delicate structures and controlling decomposition and the rationale behind many important applications of multi-component and multi-scale analysis. **Multicomponent and Multiscale Systems: Theory, Methods, and Applications in Engineering** also considers the question of why iterative methods can be powerful and more appropriate for well-balanced multi-scale and multi-component coupled nonlinear problems. The book is ideal for engineers and scientists working in theoretical and applied areas. Structural Mechanics Software Series, 1977
