effects For example ingestion of carbohydrates e g glucose caffeine resveratrol and several nutraceutical herbal extracts has been associated with short term improvements in cognitive performance Beyond specific micronutrients and macronutrients the current literature seems to support anecdotal evidence that consumption of a balanced breakfast is crucial to various measures of school performance including attention in the classroom What is clear from this emerging literature is that the relationship between nutritional status and neurocognitive functioning at various stages of the lifespan is complex An aim of this Research Topic is to bring together some recent empirical findings reviews and commentaries of the literature to date and opinion pieces relating to future directions for this burgeoning field
