

# How to grow chlorine

Chlorine is a highly reactive element that is used in a variety of applications, including water treatment, disinfection, and chemical synthesis. It is a yellow-green gas at room temperature and is highly corrosive. Chlorine is produced industrially by the electrolysis of sodium chloride (NaCl) in a brine solution. The process involves passing an electric current through the solution, which causes the sodium ions to be oxidized to chlorine gas. The chlorine gas is then collected and purified for use.
