Macroscopic Ocular Pathology Fritz H. Stefani, Gerhard Hasenfratz, 2012-12-06 Today ophthalmic pathology deals more and more with pathogenesis using highly sophisticated techniques In recent decades it has expanded to such an extent that it now fills several volumes of a modern comprehensive atlas or textbook Black and white prints of the macroscopic appearance of dissected eyes are standard in modern textbooks Color photographs although providing more visual information and a better insight into the sometimes complex disease processes of the eye are however costly Nevertheless many ophthalmologic colleagues expressed their desire to have me prepare such an atlas It is not intended to replace one of the textbooks in this field but rather to supplement existing texts and to stimulate clinical and diagnostic thinking Hence it should be used in conjunction with textbooks on anatomy and ocular pathology The reader will find references on the different subjects in the excellent modern textbooks listed below Diagnosis and treatment in ophthalmology is to a great extent based on morphologic examination Clinical ophthalmologists have available such excellent tools as the slit lamp the gonioscope and the ophthalmoscope to study and document ocular disease in vivo under high magnification Both external eye structures and transparent ocular structures can be observed better in vivo than in the pathology laboratory Therefore the pathology of these is only presented in conditions in which direct visualization is normally difficult *Ocular Pathology* David J. Lee, 2013-04-17 This book has been written to give guidance to histopathologists who are dealing with pathological specimens submitted by ophthalmologists whether in a general pathology laboratory or in a specialist ophthalmic pathology laboratory The bias has been given to the diseases encountered commonly in the routine service or in the autopsy room and the intention is to show how to achieve the maximum information from each specimen Conventional

textbooks deal with diseases of the eye on an anatomical basis but this is inappropriate for a histopathologist who is studying a globe in which the disease has varying effects on each of the individual tissue components While unconventional it seemed more acceptable to lay the book out under the relatively limited and broad headings which ophthalmologists use as indications for enucleation trauma tumour endophthalmitis vascular disease etc It also seemed logical to include a separate chapter on ocular disease as it is encountered in the autopsy room and continuing the theme to consider a keratoplasty specimen and the topics of orbital biopsy and conjunctival biopsy in separate chapters In each pathological process whenever appropriate it was important to include the effects of modern therapeutic measures because this is one of the main features of interest for the clinician For the beginner an introductory chapter on the techniques and rationale of the preliminary systematic macroscopic examination of a globe has been included with an account of the supplementary techniques which are essential for an accurate diagnosis

Ophthalmic Pathology of Animals L. Z. Saunders, L. F. Rubin, 1975-08-22

Pathology of the Eye G.O.H. Naumann, D.J. Apple, 2012-12-06 It is indeed a pleasure to write a foreword for this spectacular book which represents a landmark in the history of ocular pathology Not since the three volumes of the Henke Lubarsch handbook appeared forty years ago has anything like this come on the market This book represents a comprehensive thorough and up to date clinically oriented textbook on ocular pathology We are all indebted to the senior author who is now professor of ophthalmology at the University of Erlangen who presents us here with the fruit of decades of industrious endeavors We also have to be grateful to the American ophthalmic pathologist Dr David Apple who as one of the main collaborators of the German edition has now provided us with the English translation The book has a twofold purpose First it is meant to be a source of instruction for ophthalmologists and pathologists For that purpose it is beautifully illustrated both by clinical pictures and by excellent photomicrographs and electromicroscopic pictures Most valuable from a didactic point of view are the colored schematic drawings and the many tables These two features are practically unique and should help any neophyte in grasping the principles of ocular pathology
