**Race, Removal, and the Right to Remain** Samantha Seeley, 2021-08-05 Who had the right to live within the newly united states of America In the country's founding decades federal and state politicians debated which categories of people could remain and which should be subject to removal The result was a white Republic purposefully constructed through contentious legal political and diplomatic negotiation But as Samantha Seeley demonstrates removal like the right to remain was a battle fought on multiple fronts It encompassed tribal leaders fierce determination to expel white settlers from Native lands and

free African Americans legal maneuvers both to remain within the states that sought to drive them out and to carve out new lives in the West Never losing sight of the national implications of regional conflicts Seeley brings us directly to the battlefield to middle states poised between the edges of slavery and freedom where removal was both warmly embraced and hotly contested Reorienting the history of U S expansion around Native American and African American histories Seeley provides a much needed reconsideration of early nation building     Atlas of the Civil War National Geographic Society (U.S.), Stephen Garrison Hyslop, 2009 In this one of a kind atlas General Stonewall Jackson s map and dozens more both archival and newly created trace the battles political turmoil and defining themes of the nation s most pivotal conflict inside jacket

**Thinking with Maps** Bertram C. Bruce, 2021-05-15 A 2022 Choice Reviews Outstanding Academic

Title Spatial reasoning which promises connection across wide areas is itself ironically often not connected to other areas of knowledge Thinking with Maps Understanding the World through Spatialization addresses this problem developing its argument through historical analysis and cross disciplinary examples involving maps The idea of maps here includes traditional cartographic representations of physical environments but more broadly encompasses the wide variety of ways that visualizations are used across all disciplines to enable understanding to generate new knowledge and to effect change The idea of thinking with maps is also used broadly Maps become not simply one among many items to learn about but indispensable tools for thinking across every field of inquiry in a way similar to that of textual and mathematical language Effective use of maps becomes a way to make knowledge much as writing or mathematical exploration not only displays ideas but also creates them The book shows that maps for thinking are not just a means to improve geographic knowledge as

valuable as that may be Instead they provide mechanisms for rejuvenating our engagement with the world helping us to become more capable of facing our global challenges This book has a broader aim It is fundamentally about general principles of how we learn and know It calls for a renewed focus on democratic education in which both the means and ends are democratic Education just as the political realm should follow Dewey s dictum that democratic ends need democratic methods for their realization Maps and mapping are invaluable in that endeavor
