Simulation K. Uno,2005-12-08 In the policy arena as well as in the academic world a new challenge is having to deal with the global community We are increasingly aware that the world is linked through economy energy environment interactions We are increasingly aware at the same time that the emergence of the global community does not imply an integrated harmonious world rather it is a community where co tries regions of different interests and values face each other directly Global governance has to be achieved through actions of national governments under different motives and constraints We need to have an analytical tool that is capable of producing a global picture yet with detailed country resolution If the world is a better place now compared to 100 years ago in terms of p capita income this is due to the industrialization that continued throughout the 20th century We entered the 21st century knowing that the human aspiration that translates into ever increasing production may not be tenable in the long run Sustainability of the global community is at stake In contrast to incremental decision making through the market mechanism that should lead to some optimal state under some assumptions such as perfect knowledge smooth movement of resources no externalities and so forth we need to have an analytical tool to provide us with details of the future state of the world China as the Workshop of the World Yuning Gao,2012-04-27 Is China becoming the workshop of the world in the same way as Britain and the United States once were or is China as some multinational companies believe simply a processing segment in global production networks This book examines China s role in the international division of labor it analyzes the scale and scope of China s manufacture the type and relative sophistication of its exports in the world market and its position in the global value chain It shows that China monopolizes

industrial production by being the processing center of world Based on extensive original research this book examines the structure of production in global manufacturing industries applying both qualitative and quantitative methods It analyzes each segment of the value chain exploring in depth several specific industrial sectors It concludes that China has become deeply integrated into global manufacturing industry that China s position in the value chain is still quite low with relatively low research and development R but that in some sectors China is catching up rapidly especially in newly emerging sectors
