These volumes collect almost all of the research and expository papers of J P Serre published in mathematical journals through 1984 as well as some of his seminar reports and a few items not previously published Throughout his writings Serre has liberally sprinkled open questions and conjectures Most endnotes list subsequent progress made on these questions or improvements to the main results of the papers Some make additional comments and a few are corrections These endnotes alone justify the publication of the collected works Serre is one of the masters of mathematical exposition James Milne University of Michigan in Math Reviews

**Collected Papers** Armand Borel, 1983 This book collects the papers published by A Borel from 1983 to 1999 About half of them are research papers written on his own or in collaboration on various topics pertaining mainly to algebraic or Lie groups homogeneous spaces arithmetic groups L2 spectrum automorphic forms cohomology and covolumes L2 cohomology of symmetric or locally symmetric spaces and to the Oppenheim conjecture Other publications include surveys and personal recollections of D Montgomery Harish Chandra and A Weil considerations on mathematics in general and several articles of a historical nature on the School of Mathematics at the Institute for Advanced Study on N Bourbaki and on selected aspects of the works of H Weyl C Chevalley E Kolchin J Leray and A Weil The book concludes with an essay on H Poincaré and special relativity Some comments on and corrections to a number of papers have also been added

**Oeuvres** Armand Borel, 1983

**Oeuvres - Collected Papers IV**

Jean-Pierre Serre, 2002-12-11 The impact and influence of J P Serre's work have been notable ever since his doctoral thesis on homotopy groups The abundance of findings and deep insights found in his research and survey papers ranging from topology several complex variables and algebraic geometry to number theory group theory commutative algebra and modular forms continues to provide inspiring reading for mathematicians working in these areas in their research and their teaching Characteristic of Serre's publications are the many open questions he formulates pointing to further directions for research In four volumes of Collected Papers he has provided comments on and corrections to most articles and described the current status of the open questions with reference to later findings In this softcover edition of volume IV two recently published articles have been added one on the life and works of Andr Weil the other one on Finite Subgroups of Lie Groups From the reviews This is the fourth volume of J P Serre's Collected Papers covering the period 1985 1998 Items numbered 133 173 contain the essence of his work from that period and are devoted to number theory algebraic geometry and group theory

Half of them are articles and another half are summaries of his courses in those years and letters Most courses have never been previously published nor proofs of the announced results The letters reproduced however in particular to K Ribet and M F Vign ras provide indications of some of those proofs Also included is an interview with J P Serre from 1986 revealing his views on mathematics with the stress upon its integrity and his own mathematical activity The volume ends with Notes which complete the text by reporting recent progress and occasionally correct it Zentralblatt MATH

**Oeuvres Armand Borel,1983** **Oeuvres Armand Borel,1983** *Zeta and L-Functions of Varieties and Motives* Bruno Kahn,2020-05-07 The amount of mathematics invented for number theoretic reasons is impressive It includes much of complex analysis the re foundation of algebraic geometry on commutative algebra group cohomology homological algebra and the theory of motives Zeta and L functions sit at the meeting point of all these theories and have played a profound role in shaping the evolution of number theory This book presents a big picture of zeta and L functions and the complex theories surrounding them combining standard material with results and perspectives that are not made explicit elsewhere in the literature Particular attention is paid to the development of the ideas surrounding zeta and L functions using quotes from original sources and comments throughout the book pointing the reader towards the relevant history Based on an advanced course given at Jussieu in 2013 it is an ideal introduction for graduate students and researchers to this fascinating story

**Collected papers** Gerrit Smith Miller,1900 **Collected papers** Géza Gyula Fejérváry (báró),1909 **Collected Papers Sir Adolphus William Ward,1921** Collected Papers: Historical Sir Adolphus William Ward,1921 *Collected Papers* Mayo Clinic,1920 Oeuvres - Collected Papers I A. Borel,2014-12-04 Armand Borel s mathematical work centered on the theory of Lie groups Because of the increasingly important place of this theory in the whole of mathematics Borel s work influenced some of the most important developments of contemporary mathematics His first great achievement was to apply to Lie groups and homogenous spaces the powerful techniques of algebraic topology developed by Leray Cartan and Steenrod In 1992 Borel was awarded the International Balzan Prize for Mathematics for his fundamental contributions to the theory of Lie groups algebraic groups and arithmetic groups and for his indefatigable action in favor of high quality in mathematical research and of the propagation of new ideas He wrote more than 145 articles before 1982 which were collected in three volumes published in 1983 A fourth volume of subsequent articles was published in 2001 Volume I collects the papers written from 1948 to 1958

*Lie Groups Beyond an Introduction*  
Anthony W. Knap, 2013-03-09 Fifty years ago Claude Chevalley revolutionized Lie theory by publishing his classic *Theory of Lie Groups I* Before his book Lie theory was a mixture of local and global results As Chevalley put it This limitation was probably necessary as long as general topology was not yet sufficiently well elaborated to provide a solid base for a theory in the large These days are now passed Indeed they are passed because Chevalley's book changed matters Chevalley made global Lie groups into the primary objects of study In his third and fourth chapters he introduced the global notion of analytic subgroup so that Lie subalgebras corresponded exactly to analytic subgroups This correspondence is now taken as absolutely standard and any introduction to general Lie groups has to have it at its core Nowadays local Lie groups are a thing of the past they arise only at one point in the development and only until Chevalley's results have been stated and have eliminated the need for the local theory But where does the theory go from this point Fifty years after Chevalley's book there are clear topics E Cartan's completion of W Killing's work on classifying complex semisimple Lie algebras the treatment of finite dimensional representations of complex semisimple Lie algebras and compact Lie groups by Cartan and H Weyl the structure theory begun by Cartan for real semisimple Lie algebras and Lie groups and harmonic analysis in the setting of semisimple groups as begun by Cartan and Weyl
