

OF PREDATION AND LIFE

"In my opinion, native predators belong in our natural outdoor scenes not so much because they have a . . . monetary value . . . as because they are a manifestation of Life's wholeness Predation is a part of the Equation of Life."

Of Predation and Life [by] Paul L. Errington. Illustrated by Dycie Madson Paul Lester Errington, 1969 , Varmints and Victims Frank Van Nuys, 2015-11-09 It used to be If you see a coyote shoot it Better yet a bear Best of all perhaps A wolf How we've gotten from there to here where such predators are reintroduced protected and in some cases revered is the story Frank Van Nuys tells in *Varmints and Victims* a thorough and enlightening look at the evolution of predator management in the American West As controversies over predator control rage on *Varmints and Victims* puts the debate into historical context tracing the West's relationship with charismatic predators like grizzlies wolves and cougars from unquestioned eradication to ambivalent recovery efforts Van Nuys offers a nuanced and balanced perspective on an often emotional topic exploring the intricacies of how and why attitudes toward predators have changed over the years Focusing primarily on wolves coyotes mountain lions and grizzly bears he charts the logic and methods of management practiced by ranchers hunters and federal officials Broad in scope and rich in detail this work brings new much needed clarity to the complex interweaving of economics politics science and culture in the formulation of ideas about predator species and in policies directed at these creatures In the process we come to see how the story of predator control is in many ways the story of the American West itself from early attempts to connect the frontier region to mainstream American life and economics to present ideas about the nature and singularity of the region *Catalog of Copyright Entries. Robert E. Kohler,2019-02-27 Context and situation always matter in both human and animal lives Unique insights can be gleaned from conducting scientific studies from within human communities and animal habitats Inside Science is a novel treatment of this distinctive mode of fieldwork Robert E Kohler illuminates these resident practices through close analyses of classic studies of Trobriand Islanders Chicago hobos corner boys in Boston s North End Jane Goodall s chimpanzees of the

Gombe Stream Reserve and more Intensive firsthand observation a preference for generalizing from observed particulars rather than from universal principles and an ultimate framing of their results in narrative form characterize these inside stories from the field Resident observing takes place across a range of sciences from anthropology and sociology to primatology wildlife ecology and beyond What makes it special Kohler argues is the direct access it affords scientists to the contexts in which their subjects live and act These scientists understand their subjects not by keeping their distance but by living among them and engaging with them in ways large and small This approach also demonstrates how science and everyday life often assumed to be different and separate ways of knowing are in fact overlapping aspects of the human experience This story driven exploration is perfect for historians sociologists and philosophers who want to know how scientists go about making robust knowledge of nature and society Wildlife Review ,1961 Wildlife Abstracts ,1957
