Encyclopedia of Distances Michel Marie Deza, Elena Deza, 2016-08-16 This 4th edition of the leading reference volume on distance metrics is characterized by updated and rewritten sections on some items suggested by experts and readers as well a general streamlining of content and the addition of essential new topics Though the structure remains unchanged the new edition also explores recent advances in the use of distances and metrics for e g generalized distances probability theory graph theory coding theory data analysis New topics in the purely mathematical sections include e g the Vitanyi multiset metric algebraic point conic distance triangular ratio metric Rossi Hamming metric Taneja distance spectral semimetric between graphs channel metrization and Maryland bridge distance The multidisciplinary sections have also been supplemented with new topics including dynamic time wrapping distance memory distance allometry

atmospheric depth elliptic orbit distance VLBI distance measurements the astronomical system of units and walkability distance Leaving aside the practical questions that arise during the selection of a good distance function this work focuses on providing the research community with an invaluable comprehensive listing of the main available distances As well as providing standalone introductions and definitions the encyclopedia facilitates swift cross referencing with easily navigable bold faced textual links to core entries In addition to distances themselves the authors have collated numerous fascinating curiosities in their Who's Who of metrics including distance related notions and paradigms that enable applied mathematicians in other sectors to deploy research tools that non specialists justly view as arcane In expanding access to these techniques and in many cases enriching the context of distances themselves this peerless volume is certain to stimulate fresh research

Foundations of Measurement Patrick Suppes, 2014-06-28 *Foundations of Measurement* offers the most coherently organized treatment of the topics and issues central to measurement Much of the research involved has been scattered over several decades and a multitude of journals available in many instances only to specialties With the publication of Volumes two and three of this important work *Foundations of Measurement* is the most comprehensive presentation in the area of measurement

Philosophy of Geometry from Riemann to Poincaré R. Torretti, 2012-12-06 Geometry has fascinated philosophers since the days of Thales and Pythagoras In the 17th and 18th centuries it provided a paradigm of knowledge after which some thinkers tried to pattern their own metaphysical systems But after the discovery of non Euclidean geometries in the 19th century the nature and scope of geometry became a bone of contention Philosophical concern with geometry increased in the 1920's after Einstein used Riemannian geometry in his theory of gravitation During the last fifteen or twenty years renewed interest in the latter theory prompted by advances in cosmology has brought geometry once again to the forefront of philosophical discussion The issues at stake in the current epistemological debate about geometry can only be understood in the light of history and in fact most recent works on the subject include historical material In this book I try to give a selective critical survey of modern philosophy of geometry during its seminal period which can be said to have begun shortly after 1850 with Riemann's generalized conception of space and to achieve some sort of completion at the turn of the century with Hilbert's axiomatics and Poincaré's conventionalism The philosophy of geometry of Einstein and his contemporaries will be the subject of another book The book is divided into four chapters Chapter 1 provides background information about the history of science and philosophy

Projective Geometry John Wesley Young, 1930-12-31 John Wesley Young co authored with Oswald Veblen the first monograph on projective geometry in English That careful and thorough axiomatic treatment remains read today This volume is Young's attempt to write an accessible and intuitive treatment for non specialists The first five chapters are a careful and elementary treatment of the subject culminating in the theorems of Pascal and Brianchon and the polar system of a conic Later chapters pull metric consequences from projective results and consider the Kleinian classification of geometries by their groups of

transformations This book nearly a century after its initial publication remains a very approachable and understandable treatment of the subject

Mathematical Thought From Ancient to Modern Times Morris Kline,1990-03 Traces the development of mathematics from its beginnings in Babylonia and ancient Egypt to the work of Riemann and Godel in modern times

Foundations of Measurement: Geometrical, threshold, and probabilistic representations Patrick Suppes,David H. Krantz,2007-01-01 All of the sciences physical biological and social have a need for quantitative measurement This influential series Foundations of Measurement established the formal foundations for measurement justifying the assignment of numbers to objects in terms of their structural correspondence Volume I introduces the distinct mathematical results that serve to formulate numerical representations of qualitative structures Volume II extends the subject in the direction of geometrical threshold and probabilistic representations and Volume III examines representation as expressed in axiomatization and invariance

Positive Dynamical Systems in Discrete Time Ulrich Krause,2015-11-27 This book provides a systematic rigorous and self contained treatment of positive dynamical systems A dynamical system is positive when all relevant variables of a system are nonnegative in a natural way This is in biology demography or economics where the levels of populations or prices of goods are positive The principle also finds application in electrical engineering physics and computer sciences The author has greatly expanded the field of positive systems in surprising ways Prof Dr David G Luenberger Stanford University USA
