Receptors and Cellular Pharmacology E. Klinge, 2013-10-22 Receptors and Cellular Pharmacology is a collection of the proceedings of the Sixth International Congress of Pharmacology held in Helsinki Finland on July 20-25 1975 and organized by the Finnish Pharmacological Society The papers explore developments relating to receptors and cellular pharmacology and address a wide range of topics such as the hydrophobic properties of the neuromuscular blocking agents and the use of toxins as tools in receptor studies Comprised of 21 chapters this volume begins with an introduction to histamine receptors their pharmacological taxonomy and classification their presence in the gastric mucosa and their applications in medicine The discussion then turns to pharmacological investigations on cells in culture the acetylcholine receptor of intact and cultured chicken retina cells actions of neurotoxins on the acetylcholine receptor and the isolation and characterization of membrane receptors Subsequent chapters deal with cyclic nucleotides as mediators of drug action with particular reference to the mechanism of the relaxation promoting effects of epinephrine on the mammalian heart This book should be of interest to pharmacologists internists psychiatrists neurologists and anesthesiologists

The Nervous System, 1977

Receptor Subunits and Complexes A. Burgen, E. A. Barnard, 1992-06-18 This volume provides a wide ranging review of the variety and specificity of receptors including those for neurotransmitters hormones growth factors oncogenes and antigens and looks in depth at the fundamental features of multi subunit complexes and their vital role in coordinating and controlling the functions of the body These receptors for hormones and drugs are mostly constituted from protein subunits They may be organised as ligand operated ion channels in a cell membrane or they may be concerned with enzyme activation to generate second messengers or DNA transcription following a change in the association disassociation state of the receptor complex Advances at the molecular level have enabled scientists to relate the structure of these receptor subunits to their specific mode of action and their function and this in turn is leading the way forward to exciting new research with important medical consequences for the treatment of disease The fourteen chapters in this volume summarise these advances across a wide range of disciplines and the resulting publication will therefore be of interest to research scientists in endocrinology immunology pharmacology oncology and neurobiology

Acta Physiologica, 1977

Neurotransmission Liisa Ahtee, 2013-10-22 Neurotransmission is the second volume of the proceedings of the Sixth International Congress of

Pharmacology organized by the Finnish Pharmacological Society and held in Helsinki Finland on July 20-25 1975. The papers focus on the developments in neurotransmission and cover topics ranging from novel transmitter substances and extraneuronal uptake of catecholamines to axonal transport mechanisms and nerve growth factor. This volume has 28 chapters divided into five sections. After discussing the possible functional role of certain tryptaminergic pathways, this book turns its attention to the metabolism of endogenous noradrenaline, with emphasis on the role of 3,4-dihydroxyphenylglycol (DOPEG). The chapters that follow focus on amino acids as possible neurotransmitters, including histamine and glutamate. This text discusses as well the mechanisms underlying extraneuronal amine uptake and metabolism in the salivary glands, the effect of oxytetracycline on the responses of various tissue preparations to added noradrenaline and to field stimulation, and how axoplasmic transport is blocked by pharmacological agents. This book will be of interest to scientists representing all the major areas of pharmacology, including clinical pharmacology and toxicology, as well as interdisciplinary areas related to physiology, biochemistry, and endocrinology. Many of the topics will also appeal to internists, psychiatrists, neurologists, and anaesthesiologists.
