Science and Religion Yves Gingras, 2017-06-16 Today we hear renewed calls for a dialogue between science and religion why has the old question of the relations between science and religion now returned to the public domain and what is at stake in this debate To answer these questions historian and sociologist of science Yves Gingras retraces the long history of the troubled relationship between science and religion from the condemnation of Galileo for heresy in 1633 until his rehabilitation by John Paul II in 1992 He reconstructs the process of the gradual separation of science from theology and religion showing how God and natural theology became marginalized in the scientific field in the eighteenth and nineteenth centuries In contrast to the dominant trend among historians of science Gingras argues that science and religion are social institutions that give rise to incompatible ways of knowing rooted in different methodologies and forms of knowledge and that there never was and cannot be a genuine dialogue between them Wide ranging and authoritative this new book on one of the fundamental questions of Western thought will be of great interest to students and scholars of the history of science and of religion as well as to general readers who are intrigued by the new and much publicized conversations about the alleged links between science and religion **Religious Books and Serials in Print 1978-1979** R.R. Poe Spaces Philip Edward Phillips, 2025-10-28 This edited volume examines the life works and influence of Edgar Allan Poe from a variety of critical biographical and literary historical perspectives through diverse lenses of spatiality Eighteen contributions offer spatially oriented investigations of the critical intellectual cultural philosophical and political spaces wherein Poe defined himself as a critic and artist The collection comes together in four parts focusing on the Temporal and Atemporal Spaces Social and Political Spaces Imaginative and Psychological Spaces and Transnational and Translated Spaces Authors from the US Japan Spain France and Portugal represent Poe s pervasive and ongoing international influence When Science and Politics Collide Robert O. Schneider, 2018-03-07 This book explains

why science and politics collide why this is an especially critical problem at this precise time in U S history and what should be done to ensure that science and politics coincide The United States is waging a political war against science and the stakes are increasing When it comes to areas in which science and politics must interact such as genetics climate and energy political interests are always pushing to spin the relevant science but this becomes problematic when Americans abandon rationality for ideology or misinformation manufactured to confuse and persuade them In a series of five contemporary examples *When Science and Politics Collide* The Public Interest at Risk makes the case that none of the ways in which science and politics currently communicate serve the public interest and that some of them actually result in great harm It explains that whether about climate change vaccines pandemics or fracking experimentally proven and reproducible data

and evidence can save lives and poor politically motivated policies can doom them The book concludes with recommendations for creating a more perfect union between scientific facts and political agendas *When Religious Faith Collides with Science* Jan M. Long, 2016-08-17 A 2014 Gallup Poll indicated that 26 percent of Americans believe that humans came into existence less than 10 000 years ago with a much larger 37 percent believing the world was created in six 24 hour days Those percentages represent around 83 million and 118 million people respectively suggesting these to be ideas that resonate with a large swath of the population Given the prevalence of such thinking the question looms Is it possible that so many people could be wrong or is science simply mistaken about some of these matters This book is very much about the importance process plays in the conclusions that are reachable with Jan Long proposing that process itself can answer such questions doing so in a way that offers credibility He proposes that process entails a set of well established rules for how knowledge is acquired and these can help guide the formation of a sacred construct about beginnings In the final analysis it is a process that seeks to replace dogmatic thinking with humble and tentative expressions about that which is knowable about the many mysteries of reality that convey to sentient beings awe and wonder *Across the Secular Abyss* William Sims Bainbridge, 2007-01-01 Across the Secular Abyss draws upon the best social scientific evidence to understand profound religious changes occurring in advanced societies today as previously separate fields of science converge leaving progressively less room for faith It finds that the positive functions of religion have been exaggerated are declining and are replaceable by benefits from new Transhumanist technologies however serious concerns are raised whether atheism is compatible with long term survival of the human species given falling birth rates *Islamic Ethics and the Genome Question*, 2018-12-24 Islamic Ethics and the Genome Question is one of the very first academic works which examine the field of genomics from an Islamic perspective This twelve chapter volume presents the results from a pioneering seminar held in 2017 at the Research Center for Islamic Legislation Ethics College of Islamic Studies Hamad Bin Khalifa University in Qatar The contributors to this volume coming from different disciplines and specializations approached the key ethical questions raised by the emerging field of genomics viz the Genome Question GQ from various angles and perspectives Their shared thesis is that the breadth and depth of both the GQ and the Islamic tradition necessitate going beyond just producing quick answers in response to immediate questions In order to accommodate the complexity and wide scope of the GQ the volume included critical analyses of the ethical discourse on genomics from outside the Islamic tradition Within the Islamic tradition the contributing authors explored how the QG can be better explored by involving insights from various disciplines including Quran exegesis Islamic jurisprudence philosophy and theology Besides its interest for researchers and students specialized in ethics bioethics and Islamic studies this volume will be a source of important information for geneticists genomicists and social scientists who are interested in the ethical discourse about genomics in the Muslim world Contributors include Arzoo Ahmed Abbas Amir Saadia Bendenia Mohammed Ghaly Mutaz al Khatib Amara Naceur Aasim I Padela Ayman Shabana
