Science Immortality:

Science and Immortality Sir Oliver Lodge, 1908 **Science and Immortality** Sir William Osler, 1904 Reaching for Immortality: Can Science Cheat Death? Sandra J. Godde, 2022-04-01 At the forefront of science and technology there lie competing ideologies as to the nature of humanity and the future of human flourishing Will technology become the ultimate savior or has the work of salvation already been accomplished Are we only creatures of mind and body or are we spiritual beings at our core Reaching for Immortality bravely examines the agenda and ideals of the transhumanist movement and compares and contrasts these with the biblical vision of a physical resurrection and a divine upgrade of the entire created order Which vision of the future will inspire you and capture your allegiance This book is a primer to provoke deep thought about the impact of technological change on human personhood and asks crucial questions facing our age What does it mean to be human in light of exponential technological growth What is transhumanism and where is it leading us How important is embodiment for our personal identity How would the biblical understanding of personhood survive in a posthuman future

Immortality: Ben Bova, 1998-09-01 The first immortals are already living among us You might be one of them At first glance that arresting statement sounds as if it might come from a science fiction story But it is an astonishing exciting fact as explained clearly and cogently by Dr Ben Bova In his distinguished career Dr Bova has predicted the discovery of life on Mars the space race of the 1960s solar powered satellites the discovery of organic chemicals in interstellar space virtual reality the Strategic Defense Initiative the advent of international peacekeeping forces the discovery of ice on the Moon and electronic book publishing Now he explores the future effects of science and technology on the human life span and discovers that one day death will no longer be the inevitable end of life Dr Bova guides readers through worldwide research into the biochemical processes that cause aging and death and shows what scientists are discovering about stopping perhaps even reversing these processes According to Dr Bova if you have a normal life expectancy today the medical and biological advances that will be achieved over the next ten to twenty years will probably allow you to live long past one hundred The longer you live the more knowledge scientists will glean and the further they will be able to extend your life span With crystal clear utterly accessible prose Dr Bova explains how science could maintain the youth and vigor of a fifty year old indefinitely perhaps even reversing the effects of aging He also offers provocative thoughts on the tumultuous societal consequences of such biomedical breakthroughs as greatly extended life spans and virtual immortality transform institutions like Medicare Social Security pension plans life insurance even the very foundations of work and retirement Here is a compelling startling understandable and vitally important study of the greatest challenge and the most tantalizing opportunity ever faced by The first immortals are already living among us You might be one of them At first glance that arresting statement sounds as if it might come from a science fiction story But it is an astonishing exciting fact as explained clearly and cogently by Dr Ben Bova In his distinguished career Dr Bova has predicted the discovery of life on Mars the space race of the 1960s solar
