Science Studies An Advanced Introduction:

Science Studies David J Hess, 1997-10-01 The first comprehensive survey of this interdisciplinary field combining a concise overview of key concepts with an original and integrated framework Virtually every aspect of modern life is suffused with the byproducts of scientific research yet the study of science itself what it is how it is done and how it has evolved over time is relatively new By examining the political historical and cultural dimensions of science and technology science studies provides a conceptual tool kit for thinking about scientific in more sophisticated ways In the process of bringing disparate fields together under one tent David J Hess realizes the full promise of science studies long uncomfortably squeezed into other more traditional disciplines He provides a clear discussion of the issues and misunderstandings that have arisen in these interdisciplinary conversations His survey includes recent developments in philosophy sociology anthropology history cultural studies and feminist studies Science Studies moves beyond the discipline bound blinders of a sociology history philosophy or anthropology of science By creating its own transdisciplinary field Hess argues science studies can provide crucial conceptual tools for public discussions about the role of science and technology in a democratic society **The**

Objectivity & Diversity Sandra Harding, 2024-05-31 Worries about scientific objectivity seem never ending Social critics and philosophers of science have argued that invocations of objectivity are often little more than attempts to boost the status of a claim while calls for value neutrality may be used to suppress otherwise valid dissenting positions Objectivity is used sometimes to advance democratic agendas at other times to block them sometimes for increasing the growth of knowledge at others to resist it Sandra Harding is not ready to throw out objectivity quite yet For all of its problems she contends that objectivity is too powerful a concept simply to abandon In *Objectivity and Diversity* Harding calls for a science that is both more epistemically adequate and socially just a science that would ask How are the lives of the most economically and politically vulnerable groups affected by a particular piece of research Do they

have a say in whether and how the research is done Should empirically reliable systems of indigenous knowledge count as real science Ultimately Harding argues for a shift from the ideal of a neutral disinterested science to one that prizes fairness and responsibility Breathing Spaces Nancy N. Chen,2003-06-04 The charismatic form of healing called qigong based on meditative breathing exercises has achieved enormous popularity in China during the last two decades Qigong served a critical social organizational function as practitioners formed new informal networks sometimes on an international scale at a time when China was shifting from state subsidized medical care to for profit market medicine The emergence of new psychological states deemed to be deviant led the Chinese state to medicalize certain forms while championing scientific versions of qigong By contrast qigong continues to be promoted outside China as a traditional healing practice Breathing Spaces brings to life the narratives of numerous practitioners healers psychiatric patients doctors and bureaucrats revealing the varied and often dramatic ways they cope with market reform and social changes in China **The Oxford Handbook of**
