Science with Practice Richard A. Overfield, 1993      The Cambridge History of Science: Volume 6, The Modern Biological and Earth Sciences David C. Lindberg, Peter J. Bowler, Ronald L. Numbers, Roy Porter, 2003 This book in the highly respected Cambridge History of Science series is devoted to the history of the life and earth sciences since 1800 It provides comprehensive and authoritative surveys of historical thinking on major developments in these areas of science on the social and cultural milieus in which the knowledge was generated and on the wider impact of the major theoretical and practical innovations The articles are written by acknowledged experts who provide concise accounts of the latest historical thinking coupled with guides to the most important recent literature In addition to histories of traditional sciences the book covers the emergence of newer disciplines such as genetics biochemistry and geophysics The interaction of scientific techniques with their practical applications in areas such as medicine is a major focus of the book as is its coverage of controversial areas such as science and religion and environmentalism      **How We Teach Science** John L. Rudolph, 2019-06-01 Despite an enduring belief that science should be taught there has been no enduring consensus about how or why This is especially true when it comes to teaching scientific process John Rudolph shows that how we think about and teach science will either sustain or thwart future innovation and determine how science is perceived by the public      High Plains Horticulture John F. Freeman, 2008-11-30 High Plains Horticulture explores the significant civilizing role that horticulture has played in the development of farmsteads and rural and urban communities on the High Plains portions of Colorado Kansas Nebraska South Dakota and Wyoming drawing on both the science and the application of science practiced since 1840 Freeman explores early efforts to supplement native and imported foodstuffs state and local encouragement to plant trees the practice of horticulture at the Union Colony of Greeley the pioneering activities of economic botanists Charles Bessey in Nebraska and Aven Nelson in Wyoming and the shift from food production to community beautification as the High Plains were permanently settled and became more urbanized In approaching the history of horticulture from the perspective of local and unofficial history Freeman pays tribute to the tempered idealism learned pragmatism and perseverance of individuals from all walks of life seeking to create livable places out of the vast seemingly inhospitable High Plains He also suggests that slowly but surely those that inhabit them have been learning to adjust to the limits of that fragile land High Plains Horticulture will appeal to not only scientists and professionals but also gardening enthusiasts interested in the history of their hobby on the High Plains      The Evolution of American Ecology, 1890-2000 Sharon E. Kingsland, 2005 In the 1890s several initiatives in American botany converged The creation of new institutions such as the New York Botanical Garden coincided with radical reforms in taxonomic practice and the emergence of an experimental program of research on evolutionary problems Sharon Kingsland explores how these changes gave impetus to the new field of ecology that was defined at exactly this time She argues that the creation of institutions and research laboratories coupled with new

intellectual directions in science were crucial to the development of ecology as a discipline in the United States. The main concern of ecology, the relationship between organisms and environment, was central to scientific studies aimed at understanding and controlling the evolutionary process. Kingsland considers the evolutionary context in which ecology arose, especially neo-Lamarckian ideas and the new mutation theory, and explores the relationship between scientific research and broader theories about social progress and the evolution of human civilization. By midcentury, American ecologists were leading the rapid development of ecosystem ecology and society in the postwar context, foreshadowing the environmental critiques of the 1960s. As the ecosystem concept evolved, so too did debates about how human ecology should be incorporated into the biological sciences. Kingsland concludes with an examination of ecology in the modern urban environment, reflecting on how scientists are now being challenged to produce innovative responses to pressing problems.

**The Evolution of American Ecology 1890-2000** offers an innovative study, not only of the scientific landscape in turn-of-the-century America but of current questions in ecological science.

**Science at the American Frontier** David Cahan, M. Eugene Rudd, 2000-01-01. Science at the American Frontier is both a biography of American physicist DeWitt Bristol Brace (1859-1905) and a study of the processes by which scientific knowledge and associated instrumentation were transferred from Europe to the United States and from the east coast to the American frontier. The authors trace Brace's first-class scientific education in Boston, Baltimore, and Berlin, and they follow his career as he founded and built a department of physics at the University of Nebraska and pursued a research program at that institution. In doing so, they show how Brace's career brought him into the vanguard of the American scientific community and they illuminate the developmental process of departments of science at the newly founded land grant colleges.

**The Routledge History of American Science** Timothy W. Kneeland, 2022-12-01. The Routledge History of American Science provides an essential companion to the most significant themes within the subject area. The field of the history of science continues to grow and expand into new areas and to adopt new theories to explain the role of science and its connections to politics, economics, religion, social structures, intellectual history, and art. This book takes North America as its focus and explores the history of science in the region, both nationally and internationally, with 27 chapters from a range of disciplines. Part I takes a chronological look at the history of science in America from its origins in the Atlantic World through to the American Revolution, the Civil War, the World Wars, and ending in the postmodern era. Part

II discusses American science in practice from scientists as practitioners laboratories and field experiences to science and religion Part III examines the relationship between science and power The chapters touch on the intersection of science and imperialism environmental science in U S politics as well as capitalism and science Finally Part IV explores how science is embedded in the culture of the United States with topics such as the growing importance of climate science the role of scientific racism the construction of gender and how science and disability studies converge The final chapter reviews the way in which society has embraced or rejected science with reflections on the recent pandemic and what it may mean for the future of American science This book fills a much needed gap in the history and historiography of American science studies and will be an invaluable guide for any student or researcher in the history of science in America **Protestant Modernist Pamphlets** Edward B. Davis,2024-10-08 This work is a hybrid of a scholarly edition and an academic monograph that focuses on the relation between science and religion in early twentieth century America **Science as Service** Alan I

Davis,Diane Schmidt,1995-12-15 Works cited in this useful survey are appropriate for students librarians and amateur and professional botanists These encompass the plant kingdom in all its divisions and aspects except those of agriculture horticulture and gardening The majority of the annotations are for currently available in print or electronic reference works A comprehensive author title and a separate subject index make locating specific entries simple With materials ranging from those selected for the informed layperson to those for the specialist this new edition reflects the momentous transition from print to electronic information resources It is an appropriate purchase for public college university and professional libraries **Unmaking Botany** Kathleen Cruz Gutierrez,2025-02-28 In Anglo European botany it is customary to think of the vernacular as that which is not a Latin or Latinized scientific plant name In Unmaking Botany Kathleen Cruz Gutierrez traces a history of botany in the Philippines during the last decades of Spanish rule and the first decades of US colonization Through this history she redefines the vernacular expanding it to include embodied cosmological artistic and varied taxonomic practices From the culinary textures of rice and the lyrics crooned to honor a flower to the touch of a skirt woven from banana fiber she illuminates how vernaculars of plant knowing in the Philippines exposed the philosophical and practical limits of botany Such vernaculars remained as sovereign forms of knowledge production Yet at the same time they fueled botany s dominance over other ways of knowing plants Revealing this tension allows Gutierrez to theorize sovereign vernaculars or insight into plants that made and unmade the science which serves as a methodological provocation to examine the interplay of different knowledge

Reuben, 1996-09-15 Based on extensive research at eight universities Harvard Yale Columbia Johns Hopkins Chicago Stanford Michigan and California at Berkeley Reuben examines the aims of university reformers in the context of nineteenth century ideas about truth She argues that these educators tried to apply new scientific standards to moral education but that their modernization efforts ultimately failed      *Prairie University* Robert E. Knoll, 1995-01-01 Founded in 1869 the University of Nebraska was given the awesome responsibility of educating a new state barely connected by roads and rail lines Established as a comprehensive university uniting the arts and sciences commerce and agriculture and open to all regardless of age sex color or nationality it has as its motto *Literis dedicata et omnibus artibus* dedicated to letters and all the arts The University at first was confined to four city blocks and didn't have a building until 1871 Cows grazed the campus But soon the high aspirations of the state began to be realized Nebraska boasted the first department of psychology west of the Mississippi River and its faculty included national prominent scholars like botanist Charles Bessey and linguist A H Edgren later a member of the Nobel Commission Willa Cather Roscoe Pound Mari Sandoz and Louise Pound ranked among its early graduates And it developed a reputation for excellence in collegiate athletics Written by a beloved member of the faculty this history shows both why Robert E Knoll is so devoted to the University as well as the tests such devotion must endure Its history is hardly one of placid growth and unimpeded progress Its regents administration faculty and students have periodically fought one another sometimes over matters as crucial as the University's purpose shape and destination More often battles waged over personalities It is to these personalities that Knoll directs most of his attention The author focuses on the men and women who made a difference for good or ill He locates the University's place in the changing intellectual and academic context of the United States and charts its passage through hard times and prosperity He notes the contributions of the University to Nebraska from the early experiments in sugar beet cultivation to the national fame of its football team Most important its education of generations of Nebraskans has lifted state goals and achievement and its outreach has made the University an international community Robert E Knoll is D B and Paula Varner Professor of English Emeritus at the University of Nebraska Lincoln He is the author of numerous books and editor of the *Letters of Weldon Kees* His articles have appeared in journals such as *American Speech* *College English* *Hudson Review* and *Prairie Schooner*

*Teaching Children Science* Sally Gregory Kohlstedt, 2010-05-15 In the early twentieth century a curriculum known as nature study flourished in major city school systems streetcar suburbs small towns and even rural one room schools This object based approach to learning about the natural world marked the first systematic attempt to introduce science into elementary education and it came at a time when institutions such as zoos botanical gardens natural history museums and national parks were promoting the idea that direct knowledge of nature would benefit an increasingly urban and industrial nation The definitive history of this once pervasive nature study movement *Teaching Children Science* emphasizes the

scientific pedagogical and social incentives that encouraged primarily women teachers to explore nature in and beyond their classrooms Sally Gregory Kohlstedt brings to vivid life the instructors and reformers who advanced nature study through on campus schools summer programs textbooks and public speaking Within a generation this highly successful hands on approach migrated beyond public schools into summer camps afterschool activities and the scouting movement Although the rich diversity of nature study classes eventually lost ground to increasingly standardized curricula Kohlstedt locates its legacy in the living plants and animals in classrooms and environmental field trips that remain central parts of science education today
